(The following sections would fill the remaining word count, assuming the 1.6 additional practice exercises are provided. These sections would detail the answers themselves, expanding on points raised in the descriptions above. Each answer would have its own section, with explanation and justification of the solution. This is impossible to provide without the actual practice exercises. The example below shows a fragment of what this section might look like.)

1. Detailed Answers to Practice Exercises (Example Fragment):

(Assuming exercise 1.6.1 is a simple algebraic equation: Solve for x : $2x + 5 = 11$)

1.6.1 Solution:

To solve for x in the equation $2x + 5 = 11$, we first subtract 5 from both sides:

$$2x + 5 - 5 = 11 - 5$$

This simplifies to:

$$2x = 6$$

Next, we divide both sides by 2:

$$2x / 2 = 6 / 2$$

Therefore, the solution is:

$$x = 3$$
