The answer key is designed to be used as a self-checking tool for students and as a supplementary resource for instructors. It is organized into the following sections:

Section 1: (e.g., Introduction to Functions – Definition and Notation) – This section provides answers to questions related to the definition of functions, function notation ($f(x)$), and identifying functions from different representations (e.g., graphs, tables, mappings).

Section 2: (e.g., Domain and Range of Functions) – This section covers finding the domain and range of various functions, including algebraic, graphical, and tabular representations. It includes explanations for handling restrictions on the domain (e.g., division by zero, square roots of negative numbers).

Section 3: (e.g., Evaluating Functions) – This section addresses evaluating functions at specific values of x , including both numerical and algebraic substitutions.

Section 4: (e.g., Graphing Functions) – This section focuses on graphing functions, including transformations of parent functions (shifts, stretches, reflections), and identifying key features such as intercepts and asymptotes.

Section 5: (e.g., Function Operations) – This section covers operations on functions (addition, subtraction, multiplication, division, and composition). It provides solutions to problems involving simplifying composite functions and finding the domains of resulting functions.

Section 6: (e.g., Inverse Functions) – This section addresses finding inverse functions, verifying inverse functions, and determining if a function has an inverse. It includes graphical representations to aid in understanding the relationship between a function and its inverse.

Section 7: (e.g., Applications of Functions) – This section focuses on applying functions to real-world problems, including modeling scenarios with functions and interpreting results within the context of the problem.
