[Specific Subject and Grade Level Example: Let's assume it's 6th Grade Math]

(This section needs to be adapted to the specific subject and grade level. Replace the following with relevant examples and answer keys.)

Example 1.1 Enrichment Activity: Solving Word Problems

Problem: A farmer has 120 apples. He sells $\frac{1}{3}$ of his apples in the morning and $\frac{1}{4}$ of the remaining apples in the afternoon. How many apples does he have left?

Solution:

Apples sold in the morning: $(\frac{1}{3}) 120 = 40$ apples

Apples remaining after morning: $120 - 40 = 80$ apples

Apples sold in the afternoon: $(\frac{1}{4}) 80 = 20$ apples

Apples remaining after afternoon: $80 - 20 = 60$ apples

Answer: The farmer has 60 apples left.

Example 1.1 Extension Activity: Creating a Geometric Pattern

Instructions: Create a geometric pattern using squares and triangles. The pattern should include at least 10 shapes and demonstrate a clear progression. Describe the mathematical relationship between the number of squares and triangles in your pattern.

(This section would require a visual representation of the pattern, and the description of the mathematical relationship. An answer key wouldn't be a specific solution, but rather a rubric for evaluating the student's work based on the criteria outlined in the instructions.)

Conclusion:

Mastering 1.1 enrichment and extension activities is crucial for academic success and personal growth.
