1100 wellness place henderson nv: *Student Perspectives on School* Jeanette Berman, Jude MacArthur, 2018 In order to increase knowledge and understanding of educational settings as inclusive communities we strive to understand what supports inclusion as well as to critique barriers. Increasingly we are seeking to understand inclusion from the inside, from the perspective of the students. Article 12 of the United Nations Convention on the Rights of the Child upholds children's rights to express their views in matters that affect them and to have those views taken into consideration and acted upon, that is, actively included in decision-making. A serious consideration of Article 12 involves two rights: the right to express a view and the right to have those views given due weight. In this volume we will share a compilation of research from Aotearoa New Zealand and beyond that aimed to access and listen to the views of students. We have brought together voices of students from different educational contexts, seeking their perspectives on learning, wellbeing, disciplinary procedures, literacy intervention and what makes schools good.

1100 wellness place henderson nv: Nutrition in Sport Ronald J. Maughan, 2008-04-15 As sports have become more competitive over recent years researchers and trainers have been searching for new and innovative ways of improving performance. Ironically, an area as mundane as what an athlete eats can have profound effects on fitness, health and ultimately, performance in competition. Sports have also gained widespread acceptance in the therapeutic management of athletes with disorders associated with nutritional status. In addition, exercise has been one of the tools used for studying the control of metabolism, creating a wealth of scientific information that needs to be placed in the context of sports medicine and science. *Nutrition in Sport* provides an exhaustive review of the biochemistry and physiology of eating. The text is divided into three sections and commences with a discussion of the essential elements of diet, including sections on carbohydrates, proteins, fats, vitamins and trace elements, and drugs associated with nutrition. It also discusses athletes requiring special consideration, including vegetarians and diabetics. The second section considers the practical aspects of sports nutrition and discusses weight control (essential for sports with weight categories and athletes with eating disorders), the travelling athlete (where travel either disrupts established feeding patterns or introduces new hazards), environmental aspects of nutrition (including altitude and heat), and the role of sports nutritional products.

1100 wellness place henderson nv: **Ethical Issues in Aviation** Dr Elizabeth A Hoppe, 2012-10-01 Applied ethics has been gaining wide attention in a variety of curriculums, and there is growing awareness of the need for ethical training in general. Well-publicized ethical problems such as the Challenger disaster, the Ford Pinto case and the collapse of corporations such as Enron have highlighted the need to rethink the role of ethics in the workplace. The concept of applied ethics originated in medicine with a groundbreaking book published in 1979. Business ethics books began to appear in the 1980s, with engineering ethics following in the 1990s. This volume now opens up a new area of applied ethics, comprehensively addressing the ethical issues confronting the civil aviation industry. Aviation is unique in two major ways: firstly it has a long history of government regulations, and secondly its primary focus is the safety of its passengers and crew. For decades commercial aviation was viewed in the same manner as public utilities, and thus it was highly regulated by the government. Since the Deregulation Act of 1978, aviation has been viewed as any other business while other experts continue to believe that the sudden switch to deregulation has caused problems, especially since many airlines were unprepared for the change. Ethical Issues in Aviation focuses on current concerns and trends, to reflect the changes that have occurred in this deregulated era. The book provides the reader with an overview of the major themes in civil aviation ethics. It begins with theoretical frameworks, followed by sections on the business side of aviation, employee responsibility, diversity in aviation, ground issues regarding airports, air traffic control and security, as well as health and the environment. The contributors to the volume include both academics doing research in the field as well as professionals who provide accounts of the ethical situations that arise in the workplace.

1100 wellness place henderson nv: Parents with Disabilities and Their Children Tomas M. Braun, 2013 Despite a dark history marked by the eugenics movement, increasing numbers of people with disabilities are choosing to become parents. Recent research reveals that more than 4 million parents (six percent of American mothers and fathers) are disabled. This number will unquestionably increase as more people with disabilities exercise a broader range of lifestyle options as a result of social integration, civil rights, and new adaptive technologies. Likewise, there has been a dramatic increase in the number of veterans who are returning from war with service-connected disabilities, some of whom may already be parents and others who will enter parenthood after acquiring their disability. The right to parent without interference is protected by the U.S. Constitution and balanced by the judicially recognized power of the state to interfere to protect the well-being of its children. This book provides a comprehensive review of the barriers and facilitators people with diverse disabilities (including intellectual and developmental disabilities, psychiatric disabilities, sensory disabilities, and physical disabilities) experience when they are exercising their fundamental right to create and maintain families, with a focus on the persistent, systemic, and pervasive discrimination against parents with disabilities.
