Replace these examples with the actual problems and solutions from the "1.2 Independent Practice" section.)

Example Problem Solutions (Replace with actual problems and solutions):

Problem 1: Solve for x : $2x + 5 = 11$

Solution:

1. Subtract 5 from both sides: $2x = 6$
2. Divide both sides by 2: $x = 3$

Problem 2: Find the area of a rectangle with length 8 cm and width 5 cm.

Solution:

$$\text{Area} = \text{length} \times \text{width} = 8 \text{ cm} \times 5 \text{ cm} = 40 \text{ cm}^2$$

Problem 3: Graph the function $f(x) = x^2 - 4$

Solution: (This would include a graph of the parabola showing the vertex at (0,-4) and illustrating key points)

(Continue adding problem solutions in this format, maintaining consistency and providing detailed explanations for each. Remember to replace these examples with the actual problems and solutions from your source material. Ensure that the number of solutions reflects the number of problems in the "1.2 Independent Practice" section.
