2019 AMC 8 Answer Key: Problem Breakdown and Solution Strategies (Example Problems)

Due to copyright restrictions and the length of a full answer key, we can't provide the entire 2019 AMC 8 answer key directly. However, let's analyze a few example problem types to illustrate effective solution strategies. Remember, the specific problems and answers will vary based on the actual test version you took. You can often find individual problem discussions through online forums dedicated to the AMC 8.

Example Problem Type 1: Geometry

Problem: A rectangle has a length of 12 cm and a width of 8 cm. What is the area of the rectangle?

Solution: The area of a rectangle is calculated by multiplying its length and width. Therefore, the area is $12 \text{ cm} \times 8 \text{ cm} = 96 \text{ cm}^2$. This simple problem highlights the importance of understanding fundamental geometric formulas.

Example Problem Type 2: Algebra

Problem: If $3x + 5 = 14$, what is the value of x ?

Solution: To solve for x , we need to isolate it. Subtract 5 from both sides of the equation: $3x = 9$. Then divide both sides by 3: $x = 3$. This illustrates the basic principles of algebraic manipulation.

Example Problem Type 3: Number Theory

Problem: What is the greatest common divisor (GCD) of 12 and 18?

Solution: We can find the GCD by listing the factors of each number. The factors of 12 are 1, 2, 3, 4, 6, and 12. The factors of 18 are 1, 2, 3, 6, 9, and 18. The greatest common factor is 6. Alternatively, the Euclidean algorithm can be used for more complex GCD problems.
