dr la womens health and wellness: Communities in Action National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

dr la womens health and wellness: Major Labels Kelefa Sanneh, 2021-10-05 One of Oprah Daily's 20 Favorite Books of 2021 • Selected as one of Pitchfork's Best Music Books of the Year "One of the best books of its kind in decades." —The Wall Street Journal An epic achievement and a huge delight, the entire history of popular music over the past fifty years refracted through the big genres that have defined and dominated it: rock, R&B, country, punk, hip-hop, dance music, and pop Kelefa Sanneh, one of the essential voices of our time on music and culture, has made a deep study of how popular music unites and divides us, charting the way genres become communities. In Major Labels, Sanneh distills a career's worth of knowledge about music and musicians into a brilliant and omnivorous reckoning with popular music—as an art form (actually, a bunch of art forms), as a cultural and economic force, and as a tool that we use to build our identities. He explains the history of slow jams, the genius of Shania Twain, and why rappers are always getting in trouble. Sanneh shows how these genres have been defined by the tension between mainstream and outsider, between authenticity and phoniness, between good and bad, right and wrong. Throughout, race is a powerful touchstone: just as there have always been Black audiences and white audiences, with more or less overlap depending on the moment, there has been Black music and white music, constantly mixing and separating. Sanneh debunks cherished myths, reappraises beloved heroes, and upends familiar ideas of musical greatness, arguing that sometimes, the best popular music isn't transcendent. Songs express our grudges as well as our hopes, and they are motivated by greed as well as idealism; music is a powerful tool for human connection, but also for human antagonism. This is a book about the music everyone loves, the music everyone hates, and the decades-long argument over which is which. The opposite of a modest proposal, Major Labels pays in full.

However, alarmingly high rates of clinician burnout in the United States are detrimental to the quality of care being provided, harmful to individuals in the workforce, and costly. It is important to take a systemic approach to address burnout that focuses on the structure, organization, and culture of health care. Taking Action Against Clinician Burnout: A Systems Approach to Professional Well-Being builds upon two groundbreaking reports from the past twenty years, *To Err Is Human: Building a Safer Health System* and *Crossing the Quality Chasm: A New Health System for the 21st Century*, which both called attention to the issues around patient safety and quality of care. This report explores the extent, consequences, and contributing factors of clinician burnout and provides a framework for a systems approach to clinician burnout and professional well-being, a research agenda to advance clinician well-being, and recommendations for the field.

"This text," says coauthor Peter Walters, "is a book about accepting our God-given roles and capacities. Then empowered by the Spirit of God, we can make healthy choices regarding our mind, body, and soul. The end result is what ancients called 'the good life,' current academics call 'human flourishing,' and what scriptures call 'shalom'." "Personal wellness is often achieved through mental and physical discipline," adds coauthor John Byl. "However, it is also important to open yourself to the power of God through the Holy Spirit. It is written in Bible that 'the fruit of the Spirit is love, joy, peace, patience, kindness, goodness, faithfulness, gentleness and self-control' (Galatians 5:22-23). Ideas related to the fruit of the Spirit have been woven through the text, and a couple of chapters offer brief vignettes on a particular fruit of the Spirit, which demonstrates how the Spirit heals and makes one well." *Christian Paths to Health and Wellness*, Third Edition, will equip students with the knowledge and tools they need to adopt healthy lifestyles in all aspects of their lives. And that lifestyle will be pleasing to God and help them live out their purpose.

dr la womens health and wellness: Pursuits of Happiness Gordon Mathews, Carolina Izquierdo, 2009 Anthropology has long shied away from examining how human beings may lead happy and fulfilling lives. This book, however, shows that the ethnographic examination of well-being--defined as the optimal state for an individual, a community, and a society--and the comparison of well-being within and across societies is a new and important area for anthropological inquiry. Distinctly different in different places, but also reflecting our common humanity, well-being is intimately linked to the idea of happiness and its pursuits. Noted anthropological researchers have come together in this volume to examine well-being in a range of diverse ways and to investigate it in a range of settings: from the Peruvian Amazon, the Australian outback, and the Canadian north, to India, China, Indonesia, Japan, and the United States. Gordon Mathews is a Professor in the Department of Anthropology at the Chinese University of Hong Kong. He has written What Makes Life Worth Living? How Japanese and Americans Make Sense of Their Worlds (1996) and Global Culture /Individual Identity: Searching for Home in the Cultural Supermarket (2000), and co-written Hong Kong, China: Learning to Belong to a Nation (2007); he has co-edited Consuming Hong Kong (2001) and Japan's Changing Generations (2004). Carolina Izquierdo is currently a postdoctoral researcher at the Center for the Everyday Lives of Families (CELF) at the University of California, Los Angeles. Her research has centered on health and well-being among the Matsigenka in the Peruvian Amazon, the Mapuche in Chile, and middle-class families in the United States.
