elite medical wellness lake charles la: Social Support and Physical Health Bert N. Uchino, 2004-01-01 This book will change the way we understand the future of our planet. It is both alarming and hopeful. James Gustave Speth, renowned as a visionary environmentalist leader, warns that in spite of all the international negotiations and agreements of the past two decades, efforts to protect Earth's environment are not succeeding. Still, he says, the challenges are not insurmountable. He offers comprehensive, viable new strategies for dealing with environmental threats around the world. The author explains why current approaches to critical global environmental problems - climate change, biodiversity loss, deterioration of marine environments, deforestation, water shortages, and others - don't work. He offers intriguing insights into why we have been able to address domestic environmental threats with some success while largely failing at the international level. Setting forth eight specific steps to a sustainable future, Speth convincingly argues that dramatically different government and citizen action are now urgent. If ever a book could be described as essential, this is it.

elite medical wellness lake charles la: Safer Healthcare Charles Vincent, René Amalberti, 2016-01-13 The authors of this book set out a system of safety strategies and interventions for managing patient safety on a day-to-day basis and improving safety over the long term. These strategies are applicable at all levels of the healthcare system from the frontline to the regulation and governance of the system. There have been many advances in patient safety, but we now need a new and broader vision that encompasses care throughout the patient's journey. The authors argue

that we need to see safety through the patient's eyes, to consider how safety is managed in different contexts and to develop a wider strategic and practical vision in which patient safety is recast as the management of risk over time. Most safety improvement strategies aim to improve reliability and move closer toward optimal care. However, healthcare will always be under pressure and we also require ways of managing safety when conditions are difficult. We need to make more use of strategies concerned with detecting, controlling, managing and responding to risk. Strategies for managing safety in highly standardised and controlled environments are necessarily different from those in which clinicians constantly have to adapt and respond to changing circumstances. A realistic read that will prod even the most stubborn fast-food eating couch potato to take action toward a healthier lifestyle. —Library Journal Salad instead of steak? Working out? Skipping that second beer or glass of wine? Healthy habits are THE WORST. If you're someone who gets up every morning and can't wait for your run, considers eating sweet potatoes a splurge, and sets aside thirty minutes before work to meditate—this book isn't for you. If you're someone who thinks about getting up to go for a run but goes back to sleep, regrets last night's dinner of fast food, and can barely get to work on time—let alone meditate—then this book will help you find the motivation you've been looking for to live your healthiest life, even when you don't want to. With this funny, in-your-face guide, you won't find advice on how to "enjoy" exercise, or tips for making broccoli and kale taste as good as donuts and ice cream. What you will find are solid skills to help you actually do the healthy things you know you should be doing. Using these skills—based in acceptance and commitment therapy (ACT) and neuroscience—you'll learn to find the motivation you're really craving to adopt healthy habits, even if they do suck. You'll also discover how to accept self-criticism, develop self-compassion, and live a more meaningful life. This book not only acknowledges that many healthy habits suck, it uses science to explain why we want the things we want (junk food), crave the things we crave (sugar), and dislike the things we dislike (exercise). At the end, you'll feel validated in feeling like these things are the absolute worst. But you'll also find the motivation to do them anyway.

elite medical wellness lake charles la: *Nutrition in Sport* Ronald J. Maughan, 2008-04-15 As sports have become more competitive over recent years researchers and trainers have been searching for new and innovative ways of improving performance. Ironically, an area as mundane as what an athlete eats can have profound effects on fitness, health and ultimately, performance in competition. Sports have also gained widespread acceptance in the therapeutic management of athletes with disorders associated with nutritional status. In addition, exercise has been one of the tools used for studying the control of metabolism, creating a wealth of scientific information that needs to be placed in the context of sports medicine and science. *Nutrition in Sport* provides an exhaustive review of the biochemistry and physiology of eating. The text is divided into three sections and commences with a discussion of the essential elements of diet, including sections on carbohydrates, proteins, fats, vitamins and trace elements, and drugs associated with nutrition. It also discusses athletes requiring special consideration, including vegetarians and diabetics. The second section considers the practical aspects of sports nutrition and discusses weight control (essential for sports with weight categories and athletes with eating disorders), the travelling athlete (where travel either disrupts established feeding patterns or introduces new hazards), environmental aspects of nutrition (including altitude and heat), and the role of sports nutritional products.

elite medical wellness lake charles la: The Topography of Wellness Sara Jensen Carr, 2021-06-15 The COVID-19 pandemic has re-ignited discussions of how architects, landscapes, and urban planners can shape the environment in response to disease. This challenge is both a timely topic and one with an illuminating history. In *The Topography of Wellness*, Sara Jensen Carr offers a chronological narrative of how six epidemics transformed the American urban landscape, reflecting changing views of the power of design, pathology of disease, and the epidemiology of the environment. From the infectious diseases of cholera and tuberculosis, to so-called social diseases of idleness and crime, to the more complicated origins of today's chronic diseases, each illness and its associated combat strategies has left its mark on our surroundings. While each solution succeeded in eliminating the disease on some level, sweeping environmental changes often came with significant social and physical consequences. Even more unexpectedly, some adaptations inadvertently incubated future epidemics. From the Industrial Revolution to present day, this book illuminates the constant evolution of our relationship to wellness and the environment by documenting the shifting grounds of illness and the urban landscape.

elite medical wellness lake charles la: The Last Castle Denise Kiernan, 2017-09-26 A New York Times bestseller with an engaging narrative and array of detail" (The Wall Street Journal), the "intimate and sweeping" (Raleigh News & Observer) untold, true story behind the Biltmore Estate—the largest, grandest private residence in North America, which has seen more than 120 years of history pass by its front door. The story of Biltmore spans World Wars, the Jazz Age, the Depression, and generations of the famous Vanderbilt family, and features a captivating cast of real-life characters including F. Scott Fitzgerald, Thomas Wolfe, Teddy Roosevelt, John Singer Sargent, James Whistler, Henry James, and Edith Wharton. Orphaned at a young age, Edith Stuyvesant Dresser claimed lineage from one of New York's best known families. She grew up in Newport and Paris, and her engagement and marriage to George Vanderbilt was one of the most watched events of Gilded Age society. But none of this prepared her to be mistress of Biltmore House. Before their marriage, the wealthy and bookish Vanderbilt had dedicated his life to creating a spectacular European-style estate on 125,000 acres of North Carolina wilderness. He summoned the famous landscape architect Frederick Law Olmsted to tame the grounds, collaborated with celebrated architect Richard Morris Hunt to build a 175,000-square-foot chateau, filled it with priceless art and antiques, and erected a charming village beyond the gates. Newlywed Edith was now mistress of an estate nearly three times the size of Washington, DC and benefactress of the village and surrounding rural area. When fortunes shifted and changing times threatened her family, her home, and her community, it was up to Edith to save Biltmore—and secure the future of the region and her husband's legacy. This is the fascinating, "soaring and gorgeous" (Karen Abbott) story of how the largest house in America flourished, faltered, and ultimately endured to this day.

elite medical wellness lake charles la: Slum Health Jason Corburn, Lee Riley, 2016-06-07 Urban slum dwellers—especially in emerging-economy countries—are often poor, live in squalor, and suffer unnecessarily from disease, disability, premature death, and reduced life expectancy. Yet living in a city can and should be healthy. *Slum Health* exposes how and why slums can be unhealthy; reveals that not all slums are equal in terms of the hazards and health issues faced by residents; and suggests how slum dwellers, scientists, and social movements can come together to make slum life safer, more just, and healthier. Editors Jason Corburn and Lee Riley argue that valuing both new biologic and “street” science—professional and lay knowledge—is crucial for improving the well-being of the millions of urban poor living in slums.

elite medical wellness lake charles la: Tourists, Tourism and the Good Life Philip Pearce, Sebastian Filep, Glenn Ross, 2010-09-13 Tourism is arguably one of the largest self-initiated commercial interventions to create well-being and happiness on the entire planet. Yet there is a lack of specific attention to the ways in which we can better understand and evaluate the relationship between well-being and travel. The recent surge of scholarly work in positive psychology concerned with human well-being and flourishing represents a contemporary force with the potential to embellish and augment much current tourism study. This book maps out the field and then draws links between tourists, tourism and positive psychology. It discusses topics such as the issue of excess materialism and its fragile relationship with well-being, the value of positive psychology to lifestyle businesses, and the insights of the research field to spa and wellness tourism. This volume will interest those who study and practise tourism as well as scholars and graduate students in a range of disciplines such as psychology, sociology, business and leisure.

elite medical wellness lake charles la: Potentiating Health and the Crisis of the Immune System A. Mizrahi, S. Fulder, Nimrod Sheinman, 1997-06-30 With all the enormous resources that are invested in medicine, it is sometimes a mystery why there is so much sickness still in evidence. Our life span, though higher than at any time in history, has now leveled off and has not significantly increased in the last two generations. There is a one-third increase in long-term illness in the last 20 years and a 44% increase in cancer incidence, which are not related to demographic issues. In some modern countries, the level of morbidity (defined as days off work because of sickness) has increased by two thirds in this time. Despite \$1 trillion spent on cancer research in 20 years, the War On Cancer has recently been pronounced a complete failure by the u. s. President's Cancer Panel. Evidently we still have a long way to go. The goal of Health for All by the Year 2000 as the World Health Organization has put it, is another forgotten dream. As ever, the answer will be found in breaking out of the old philosophical patterns and discovering the new, as yet unacceptable concepts. The problems of medicine today require a Kuhnian breakthrough into new paradigms, and new ways of thinking. And these new ways will not be mere variations of the old, but radical departures. This book, and the conference upon which it was based, is part of a search for these new pathways.

elite medical wellness lake charles la: Making Healthy Places Andrew L. Dannenberg, Howard Frumkin, Richard J. Jackson, 2012-09-18 The environment that we construct affects both humans and our natural world in myriad ways. There is a pressing need to create healthy places and to reduce the health threats inherent in places already built. However, there has been little awareness of the adverse effects of what we have constructed-or the positive benefits of well designed built environments. This book provides a far-reaching follow-up to the pathbreaking *Urban Sprawl and Public Health*, published in 2004. That book sparked a range of inquiries into the connections between constructed environments, particularly cities and suburbs, and the health of residents, especially humans. Since then, numerous studies have extended and refined the book's research and reporting. *Making Healthy Places* offers a fresh and comprehensive look at this vital subject today. There is no other book with the depth, breadth, vision, and accessibility that this book

offers. In addition to being of particular interest to undergraduate and graduate students in public health and urban planning, it will be essential reading for public health officials, planners, architects, landscape architects, environmentalists, and all those who care about the design of their communities. Like a well-trained doctor, Making Healthy Places presents a diagnosis of--and offers treatment for--problems related to the built environment. Drawing on the latest scientific evidence, with contributions from experts in a range of fields, it imparts a wealth of practical information, with an emphasis on demonstrated and promising solutions to commonly occurring problems.

elite medical wellness lake charles la: Burnout, Fatigue, Exhaustion Sigvard Neckel, Anna Katharina Schaffner, Greta Wagner, 2017-06-19 This interdisciplinary book explores both the connections and the tensions between sociological, psychological, and biological theories of exhaustion. It examines how the prevalence of exhaustion – both as an individual experience and as a broader socio-cultural phenomenon – is manifest in the epidemic rise of burnout, depression, and chronic fatigue. It provides innovative analyses of the complex interplay between the processes involved in the production of mental health diagnoses, socio-cultural transformations, and subjective illness experiences. Using many of the existing ideologically charged exhaustion theories as case studies, the authors investigate how individual discomfort and wider social dynamics are interrelated. Covering a broad range of topics, this book will appeal to those working in the fields of psychology, sociology, medicine, psychiatry, literature, and history.
