health and wellness workshops: Mental Health, Substance Use, and Wellbeing in Higher Education National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Policy and Global Affairs, Board on Health Sciences Policy, Board on Higher Education and Workforce, Committee on Mental Health, Substance Use, and Wellbeing in STEMM Undergraduate and Graduate Education, 2021-03-05 Student wellbeing is foundational to academic success. One recent survey of postsecondary educators found that nearly 80 percent believed emotional wellbeing is a very or extremely important factor in student success. Studies have found the dropout rates for students with a diagnosed mental health problem range from 43 percent to as high as 86 percent. While dealing with stress is a normal part of life, for some students, stress can adversely affect their physical, emotional, and psychological health, particularly given that adolescence and early adulthood are when most mental illnesses are first manifested. In addition to students who may develop mental health challenges during their time in postsecondary education, many students arrive on campus with a mental health problem or having experienced significant trauma in their lives, which can also negatively affect physical, emotional, and psychological wellbeing. The nation's institutions of higher education are seeing increasing levels of mental illness, substance use and other forms of emotional distress among their students. Some of the problematic trends have been ongoing for decades. Some have been exacerbated by the COVID-19 pandemic and resulting economic consequences. Some are the result of long-festering systemic racism in almost every sphere of American life that are becoming more widely acknowledged throughout society and must, at last, be addressed. Mental Health, Substance Use, and Wellbeing in Higher Education lays out a variety of possible strategies and approaches to meet increasing demand for mental health and substance use services, based on the available evidence on the nature of the issues and what works in various situations. The recommendations of this report will support the delivery of mental health and wellness services by the nation's institutions of higher education.

health and wellness workshops: Graduate STEM Education for the 21st Century National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Revitalizing Graduate STEM Education for the 21st Century, 2018-09-21 The U.S. system of graduate education in science, technology, engineering, and mathematics (STEM) has served the nation and its science and engineering enterprise extremely well. Over the course of their education, graduate students become involved in advancing the frontiers of discovery, as well as in making significant contributions to the growth of the U.S. economy, its national security, and the health and well-being of its people. However, continuous, dramatic innovations in research methods and technologies, changes in the nature and availability of work, shifts in demographics, and expansions in the scope of occupations needing STEM expertise raise questions about how well the current STEM graduate education system is meeting the full array of 21st century needs. Indeed, recent surveys of employers and graduates and studies of graduate education suggest that many graduate programs do not adequately prepare students to translate their knowledge into impact in multiple careers. *Graduate STEM Education for the 21st Century* examines the current state of U.S. graduate STEM education. This report explores how the system might best respond to ongoing developments in the conduct of research on evidence-based teaching practices and in the needs and interests of its students and the broader society it seeks to serve. This will be an essential resource for the primary stakeholders in the U.S. STEM enterprise, including federal and state policymakers, public and private funders, institutions of higher education, their administrators and faculty, leaders in business and industry, and the students the system is intended to educate.

Mentoring relationships provide developmental spaces in which students' STEMM skills are honed and pathways into STEMM fields can be discovered. There is a gap between what we know about effective mentoring and how it is practiced in higher education. The Science of Effective Mentorship in STEMM studies mentoring programs and practices at the undergraduate and graduate levels. It explores the importance of mentorship, the science of mentoring relationships, mentorship of underrepresented students in STEMM, mentorship structures and behaviors, and institutional cultures that support mentorship. practices that can be adopted and adapted by institutions, departments, and individual faculty members.

health and wellness workshops: Investing in the Health and Well-Being of Young Adults National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Improving the Health, Safety, and Well-Being of Young Adults, 2015-01-27 Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

The authors employ four data collection and analysis streams: a literature review, a survey of employers, a longitudinal analysis of medical claims and wellness program data from a sample of employers, and five employer case studies.

health and wellness workshops: Text Structures From Poetry, Grades 4-12 Gretchen Bernabei, Laura Van Prooyen, 2020-01-17 Poetry is a joyful art form, but how do you teach students to joyfully read, analyze, and write poems? In Text Structures from Poetry, Grades 4-12, award-winning educator Gretchen Bernabei teams up with noted poet Laura Van Prooyen to light the path. Centered around 50 classroom-proven lesson and poem pairs, the mentor texts represent a broad range of voices in contemporary poetry and the canon. These unique and engaging lessons show educators how to pop the hood on a poem to discover what makes it work, using text structures to unlock the engine of a poem. This method enables educators to engage students in reading and re-reading a poem closely, to identify how the parts of the poem relate to each other to create movement, and to leverage what they have learned to write their own evocative poems. Each of the 50 lessons includes a mentor poem that serves as an excellent model for young writers, a diagram that illustrates the text structure of the poem, and several inspiring examples of student poems written to emulate the mentor poem. Easy-to-use instructional resources enhance instructor

and student understanding and include: Teaching notes for unlocking the text structure of a poem and the engine that makes it work. Tips for exploring rhyme scheme, meter, and fixed forms. Instructional sequences that vary the ways students can read and write poems and other prose forms. Ideas for revising and publishing student poems. A Meet the Contemporary Authors section that includes fascinating messages from the contemporary poets. health and wellness workshops: Educating the Student Body Committee on Physical Activity and Physical Education in the School Environment, Food and Nutrition Board, Institute of Medicine, 2013-11-13 Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

health and wellness workshops: It's Not Always Depression Hilary Jacobs Hendel, 2018-02-06 Fascinating patient stories and dynamic exercises help you connect to healing emotions, ease anxiety and depression, and discover your authentic self. Sara suffered a debilitating fear of asserting herself. Spencer experienced crippling social anxiety. Bonnie was shut down, disconnected from her feelings. These patients all came to psychotherapist Hilary Jacobs Hendel seeking treatment for depression, but in fact none of them were chemically depressed. Rather, Jacobs Hendel found that they'd all experienced traumas in their youth that caused them to put up emotional defenses that masqueraded as symptoms of depression. Jacobs Hendel led these patients and others toward lives newly capable of joy and fulfillment through an empathic and effective therapeutic approach that draws on the latest science about the healing power of our emotions. Whereas conventional therapy encourages patients to talk through past events that may trigger anxiety and depression, accelerated experiential dynamic psychotherapy (AEDP), the method practiced by Jacobs Hendel and pioneered by Diana Fosha, PhD, teaches us to identify the defenses and inhibitory emotions (shame, guilt, and anxiety) that block core emotions (anger, sadness, fear, disgust, joy, excitement, and sexual excitement). Fully experiencing core emotions allows us to enter an openhearted state where we are calm, curious, connected, compassionate, confident, courageous, and clear. In *It's Not Always Depression*, Jacobs Hendel shares a unique and pragmatic tool called the Change Triangle—a guide to carry you from a place of disconnection back to your true self. In these pages, she teaches lay readers and helping professionals alike • why all emotions—even the most painful—have value. • how to identify emotions and the defenses we put up against them. • how to get to the root of anxiety—the most common mental illness of our time. • how to have compassion for the child you were and the adult you are. Jacobs Hendel provides navigational tools, body and thought exercises, candid personal anecdotes, and profound insights gleaned from her patients' remarkable breakthroughs. She shows us how to work the Change Triangle in our everyday lives and chart a deeply personal, powerful, and hopeful course to psychological well-being and emotional engagement.

includes a wide range of important topics, ranging from current conceptual approaches to health and wellness in the workplace, to common problems in the workplace such as presenteeism/abstenteeism, common illnesses, job-related burnout, to prevention and intervention methods. It consists of five major parts. Part I, "Introduction and Overviews," provides an overview and critical evaluation of the emerging conceptual models that are currently driving the clinical research and practices in the field. This serves as the initial platform to help better understand the subsequent topics to be discussed. Part II, "Major Occupational Symptoms and Disorders," exposes the reader to the types of critical occupational health risks that have been well documented, as well as the financial and productivity losses associated with them. In Part III, "Evaluation of Occupational Causes and Risks to Workers' Health," a comprehensive evaluation of these risks and causes of such occupational health threats is provided. This leads to Part IV, "Prevention and Intervention Methods," which delineates methods to prevent or intervene with these potential occupational health issues. Part V, "Research, Evaluation, Diversity and Practice," concludes the book with the review of epidemiological, measurement, diversity, policy, and practice issues—with guidelines on changes that are needed to decrease the economic and health care impact of illnesses in the workplace, and recommendations for future. All chapters provide a balance among theoretical models, current best-practice guidelines, and evidence-based documentation of such models and guidelines. The contributors were carefully selected for their unique knowledge, as well as their ability to meaningfully present this information in a comprehensive manner. As such, this Handbook is of great interest and use to health care and rehabilitation professionals, management and human resource personnel, researchers and academicians alike.

health and wellness workshops: Dying to be Men Will Courtenay, 2011-05-09 Masculinity has a powerful effect on the health of men and boys. Indeed, many of the behaviors they use to be men actually increase their risk of disease, injury, and death. In this book, Dr. Will Courtenay, an internationally recognized expert on men's health, provides a foundation for understanding this troubling reality. With a comprehensive review of data and literature, he identifies specific gender differences in the health-related attitudes, beliefs, and behaviors of men and boys and the health consequences of these differences. He then describes the powerful social, environmental, institutional, and cultural influences that encourage their unhealthy behaviors and constrain their adoption of healthier ones. In the book's third section, he more closely examines the health needs of specific populations of men, such as ethnic-minority men, rural men, men in college, and men in prisons. Courtenay also provides four empirical studies conducted with multidisciplinary colleagues that examine the associations between masculinity and men and boys' health beliefs and practices. Finally, he provides specific strategies and an evidence-based practice guideline for working with men in a variety of settings, as well as a look to the future of men's health. Medical professionals, social workers, public health professionals, school psychologists, college health professionals, mental health practitioners, academics, and researchers from a broad array of disciplines, and anyone interested in this topic will find it to be an extensively researched and accessible volume.
