how to start a medical transportation business: *Start Your Own Senior Transportation Business* Craig Wallin, 2020-01-26 Discover how you can earn \$35 to \$60 an hour driving seniors to medical appointments. This fast-growing service business is needed every day in every town and you can get started on a shoestring. One in five seniors does not drive and many of those may be forced to stay home due to lack of transportation and miss a medical appointment or be unable to shop for groceries. A private senior transportation service helps those seniors get around easily. In addition, the federal government now requires that state medicaid programs cover the cost of transportation to medical appointments. This has created even more opportunities for local senior transportation businesses. A senior transportation can be started with very little money - if you have a reliable car and a cellphone, you're almost there. The rewards are great - not just in dollars and cents - but in helping seniors live better lives by helping them enjoy their independence as long as possible. That's priceless. What is an N.E.M.T. vehicle? Unlike some specialized medical transportation vehicles - like an ambulance - a basic senior ride service does not require a special vehicle to transport seniors. There are far more seniors who are able to walk and just need a ride on a regular basis. NEMT is short for non-emergency medical transport. The name means exactly that - unlike an ambulance, your vehicle, whether a car, SUV or minivan, is an NEMT vehicle if you are taking passengers to and from medical appointments. You won't need to buy an expensive new van or specialized equipment, because you can focus on where there is a steady demand - transporting seniors who are able to walk. (The medical term is ambulatory) The opportunities are wide open in this fast-growing field, and so is the potential for an above-average income that's recession-proof. At current rates, a six-figure income is not uncommon for full-time drivers. If you've always wanted to be your own boss, running a business that makes a positive difference in people's lives every day, and are a caring person, take the first step by reading my step-by-step guide. The advice you'll find in the book will give you a head start, reduce risk, and cut startup costs. So you can get started right away, the book also contains a list of major transportation brokers who hire local drivers in all states.

how to start a medical transportation business: *Communities in Action* National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health

and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

This book offers a comprehensive look at a wide range of issues, including the prevalence of disability across the lifespan; disability trends the role of assistive technology; barriers posed by health care and other facilities with inaccessible buildings, equipment, and information formats; the needs of young people moving from pediatric to adult health care and of adults experiencing premature aging and secondary health problems; selected issues in health care financing (e.g., risk adjusting payments to health plans, coverage of assistive technology); and the organizing and financing of disability-related research. *The Future of Disability in America* is an assessment of both principles and scientific evidence for disability policies and services. This book's recommendations propose steps to eliminate barriers and strengthen the evidence base for future public and private actions to reduce the impact of disability on individuals, families, and society.

how to start a medical transportation business: Homelessness, Health, and Human Needs Institute of Medicine, Committee on Health Care for Homeless People, 1988-02-01 There have always been homeless people in the United States, but their plight has only recently stirred widespread public reaction and concern. Part of this new recognition stems from the problem's prevalence: the number of homeless individuals, while hard to pin down exactly, is rising. In light of this, Congress asked the Institute of Medicine to find out whether existing health care programs were ignoring the homeless or delivering care to them inefficiently. This book is the report prepared by a committee of experts who examined these problems through visits to city slums and impoverished rural areas, and through an analysis of papers written by leading scholars in the field.

how to start a medical transportation business: Crisis Standards of Care Institute of Medicine, Board on Health Sciences Policy, Committee on Guidance for Establishing Standards of Care for Use in Disaster Situations, 2012-08-26 Catastrophic disasters occurring in 2011 in the United States and worldwide-from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand-have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations-both naturally occurring and man-made-under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations*), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement-state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. *Crisis Standards of Care* provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. *Crisis Standards of Care* is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement

toolkit; and Volume 7 contains appendixes with additional resources.

how to start a medical transportation business: Safety and Quality in Medical Transport Systems John W. Overton, 2019-07-23 The Commission on Accreditation of Medical Transport Systems (CAMTS) has been accrediting air and ground transport services since 1991. One of the most significant needs the Commission has recognized is to assist transport services in creating a culture that supports safety and quality for both crews and patients. Most of the helicopter EMS (emergency medical service) accidents and many ground ambulance accidents can be attributed to human factors and systems designs that lead to poor decision-making. Management commitment is vital to create and maintain a culture that supports risk assessment, accountability, professionalism and organizational dynamics. This reference book has been created by CAMTS to address this need directly and comprehensively. It offers a groundbreaking collection of expert insights and practical solutions that can be used by EMS, Fire and Rescue, public and private services, and professional emergency and transport professionals worldwide. Quoting from the foreword written by the late Robert L. Helmreich, Professor Emeritus of Psychology at The University of Texas Human Factors Research Project, 'This is an important book which should be required reading for everyone involved in patient transport, from managers and dispatchers to those at the sharp end... The experienced and able authors and editors of this work use culture as the overarching concept needed to maximize safety while delivering patients expeditiously.'
