Chapter 1: Consolidated Financial Statements: Unraveling the Intricacies of Parent-Subsidiary Relationships

Understanding consolidated financial statements is a cornerstone of Intermediate Accounting 2. This chapter delves into the reasons behind consolidation, focusing on the accounting treatment of investments in subsidiaries. We'll explore different methods, including the equity method and the acquisition method, dissecting their implications on the balance sheet, income statement, and statement of cash flows. Key areas covered include:

The Equity Method: Understanding its application, advantages, and limitations. We'll examine how to account for share of net income or loss and dividends received. We will also highlight the differences between the equity method and cost method.

The Acquisition Method: A deep dive into the steps involved in preparing consolidated financial statements using the acquisition method. This includes identifying and accounting for goodwill, non-controlling interests, and any necessary adjustments.

Dealing with Intercompany Transactions: Learning how to eliminate intercompany transactions and their impact on consolidated financial statements. This includes sales, loans, and other transactions between the parent and subsidiary.

Consolidation Worksheets: Mastering the use of consolidation worksheets to effectively track and eliminate intercompany transactions and balances.

Chapter 2: Equity Accounting: Navigating Investments in Affiliates

This chapter builds upon the consolidation concepts by focusing on investments in affiliates, where the level of control is less significant than in a subsidiary. We'll cover the equity method in detail, exploring the nuances of its application when the investment doesn't represent control. The following will be discussed:

Defining an Affiliate: Understanding the criteria that define an affiliate and the circumstances that warrant the use of the equity method.

Applying the Equity Method to Affiliates: A step-by-step guide to accounting

for investments in affiliates using the equity method.

Accounting for Impairment: Identifying and accounting for impairment losses on investments in affiliates.

Distinguishing between Affiliates and Subsidiaries: Clearly understanding the differences in accounting treatment based on the level of influence.

Chapter 3: Leases: Mastering the New Lease Accounting Standard (IFRS 16 and ASC 842)

The complexities of lease accounting have been significantly revised under IFRS 16 and ASC 842. This chapter provides a comprehensive explanation of the new standards, detailing the classification of leases (operating versus finance) and their impact on financial statements. We will cover:

Lease Classification Criteria: Understanding the factors that determine whether a lease should be classified as an operating lease or a finance lease.

Accounting for Finance Leases: Learning the proper accounting treatment for finance leases, including the recognition of lease liabilities and right-of-use assets.

Accounting for Operating Leases: Understanding the accounting treatment for operating leases under the new standards.
