Walker, 2006 During the 1960s and 1970s a remarkable series of books was produced by academic staff in the field of accounting at the University of Sydney. It was a period when academic research was largely analytical rather than empirically-based. For the most part, the interests of academics at Sydney were largely directed at questioning the status quo - either in the way accounting or auditing was practiced, or in the conventional wisdom expressed in textbooks of the time. The Sydney Accounting Classics series reflects the diversity of interests of the 'Sydney school' at that time. It also recognises the tremendous impact of the foundation professor of accounting, R.J. Chambers. This reprint series ensures that the ideas developed during this period remain available to new generations of scholars and researchers. The Sydney Accounting Classics series is an initiative of the Accounting Foundation, in association with Sydney University Press. *Consolidated Statements: A History and Analysis:* This book covers the history of the development of the use of consolidated statements in the UK, US and Australia. The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally and

knowles accounting: *The Role of the State and Accounting Transparency* Mohammad Nurunnabi, 2016-03-17 Dr Mohammad Nurunnabi examines the factors that affect the implementation of International Financial Reporting Standards (IFRS) in developing countries and answers these specific research questions: - What is the relative impact of accounting regulatory

frameworks and politico-institutional factors on the implementation of IFRS in developing countries? - How do cultural factors affect said implementation? - How does a study of implementing IFRS help to build an understanding of a theory of the role of the state in accounting change in developing countries? This follows a mixed methodology approach, in which interviews are conducted, IFRS-related enforcement documents and annual reports are evaluated. More than 138 countries have adopted IFRS, yet the International Accounting Standards Board (IASB) does not provide an implementation index. Financial reporting varies by country, even within the area of the world that has apparently adopted IFRS and Nurunnabi offers an important viewpoint that considers the issues of IFRS implementation from various perspectives. This is an invaluable resource for Undergraduate, Masters and PhD students, policy makers (at local, regional and international level) namely the IASB, World Bank, IMF, practitioners and users, giving them the necessary insight into the financial reporting environment and the state's attitude towards accounting transparency. Most importantly, this book contributes to military and democratic political regimes and the Max Weberian view of the theory of the role of the state's attitude towards accounting transparency.
