liberty acupuncture and wellness east meadow: Herbs and Roots Tamara Venit Shelton, 2019-11-26 An innovative, deeply researched history of Chinese medicine in America and the surprising interplay between Eastern and Western medical practice Chinese medicine has a long history in the United States, with written records dating back to the American colonial period. In this intricately crafted history, Tamara Venit Shelton chronicles the dynamic systems of knowledge, therapies, and materia medica crossing between China and the United States from the eighteenth century to the present. Chinese medicine, she argues, has played an important and often unacknowledged role in both facilitating and undermining the consolidation of medical authority among formally trained biomedical scientists in the United States. Practitioners of Chinese medicine, as racial embodiments of “irregular” medicine, became useful foils for Western physicians struggling to assert their superiority of practice. At the same time, Chinese doctors often embraced and successfully employed Orientalist stereotypes to sell their services to non-Chinese patients skeptical of modern biomedicine. What results is a story of racial constructions, immigration politics, cross-cultural medical history, and the lived experiences of Asian Americans in American history.

liberty acupuncture and wellness east meadow: *HypnoBirthing, Fourth Edition* Marie Mongan, 2015-12-08 HypnoBirthing® has gained momentum around the globe as a positive and empowering method of childbirth. In fact, more than 25,000 books were sold in 2014 through the author's website alone, and according to Nielsen BookScan, over 70,000 were sold through reporting retailers since its publication in 2005. Here's why: HypnoBirthing helps women to become empowered by developing an awareness of the instinctive birthing capability of their bodies. It greatly reduces the pain of labor and childbirth; frequently eliminates the need for drugs; reduces the need for caesarian surgery or other doctor-controlled birth interventions; and it also shortens birthing and recovery time, allowing for better and earlier bonding with the baby, which has been proven to be vital to the mother-child bond. What's more, parents report that their infants sleep better and feed more easily when they haven't experienced birth trauma. HypnoBirthing founder Marie Mongan knows from her own four births that it is not necessary for childbirth to be a terribly painful experience. In this book she shows women how the Mongan Method works and how parents they can take control of the greatest and most important event of their lives. So, why is birth such a traumatic event for so many women? And why do more than 40% of births now end in caesarian section, the highest percentage in history? The answer is simple: because our culture teaches women to fear birth as a painful and unsettling experience. Fear causes three physical reactions in the body—tightening of the muscles, reduced blood flow to the birthing muscles, and the release of certain hormones—which increase the pain and discomfort of childbirth. This is not hocus-pocus; this is science.

liberty acupuncture and wellness east meadow: Information Arts Stephen Wilson, 2003-02-28 An introduction to the work and ideas of artists who use—and even influence—science and technology. A new breed of contemporary artist engages science and technology—not just to adopt the vocabulary and gizmos, but to explore and comment on the content, agendas, and possibilities. Indeed, proposes Stephen Wilson, the role of the artist is not only to interpret and to spread scientific knowledge, but to be an active partner in determining the direction of research. Years ago, C. P. Snow wrote about the two cultures of science and the humanities; these developments may finally help to change the outlook of those who view science and technology as separate from the general culture. In this rich compendium, Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics, the physical sciences, biology, kinetics, telecommunications, and experimental digital systems such as artificial intelligence and ubiquitous computing. In addition to visual documentation and statements by the artists, Wilson examines relevant art-theoretical writings and explores emerging scientific

and technological research likely to be culturally significant in the future. He also provides lists of resources including organizations, publications, conferences, museums, research centers, and Web sites.

liberty acupuncture and wellness east meadow: *Neuro-optometric Rehabilitation* William V. Padula, 2000 This is an in-depth study of the various issues that lie at the core of appropriate neuro-optometric rehabilitation. Background material includes the relationship of vision to development; the examination of perception as it is affected by vision impairment; and how function and performance are impacted by the sensory component of the visual process. The next phase of understanding is the relationship between vision, posture and movement. Whether it is attempting to understand the relationship of vision and its influence on posture for a physically-disabled child or, how vision affects posture after a person has suffered a cerebral vascular accident or traumatic brain injury, the developmental nature of vision affecting the sensory motor system is the basis by which one establishes the framework for visual rehabilitation of the neurologically-challenged patient. The final chapters represent new directions in neuro-optometric rehabilitation with emphasis on post-trauma vision syndrome as well as visual midline shift syndrome, a new concept in thinking concerning the sensory distortions that can occur when there is a neurological interference in the sensory-motor system.--Publisher's description.

liberty acupuncture and wellness east meadow: So Many Lives, Just One Soul Nereida Rojas-Seitz, 2021-12-27 Our past lives are great portals to help us heal spiritually and physically in our present life, and though this is a great reason to revisit our past lives, I just find it fascinating to see all the different locations, people, clothing, food, my thinking process, the love, and then the nitty gritty, the pains, and the issues that I eventually have been healing during this process. Seeing one's past lives can be fun and difficult, it really depends on one's own purpose to see these past lives. These lives that I share with you are the most prominent ones. Oh, there are others, yet these are the ones that I've done the most healings on, released the pains from myself and have enjoyed the most, not necessarily in the same life. I wish you could hear my voice as I wrote these lives down so you could hear the emotions, the thrills, the sadnesses, the pains, loves and adventures I experienced. I thank you for sharing a part of my soul's journey. Enjoy!
