low country pet wellness clinic: *Never Turn Your Back on an Angus Cow* Dr. Jan Pol, David Fisher, 2014-08-14 The star of The Incredible Dr. Pol shares his amusing, and often poignant, tales from his four decades as a vet in rural Michigan. Dr. Jan Pol is not your typical veterinarian. Born and raised the Netherlands on a dairy farm, he is the star of Nat Geo Wild's hit show The Incredible Dr. Pol and has been treating animals in rural Michigan since the 1970s. Dr. Pol's more than 20,000 patients have ranged from white mice to 2600-pound horses and everything in between. From the time he was twelve years old and helped deliver a litter of piglets on his family's farm to the incredible moments captured on his hit TV show, Dr. Pol has amassed a wealth of stories of what it's like caring for this menagerie of animals. He shares his own story of growing up surrounded by animals, training to be a vet in the Netherlands, and moving to Michigan to open his first practice in a pre fab house. He has established himself as an empathetic yet no-nonsense vet who isn't afraid to make the difficult decisions in order to do what's best for his patients—and their hard-working owners. A sick pet can bring heartache, but a sick cow or horse could threaten the very livelihood of a farmer whose modest profits are dependent on healthy livestock. Reminiscent of the classic books of James Herriot, *Never Turn Your Back on an Angus Cow* is a charming, fascinating, and funny memoir that will delight animal lovers everywhere.

low country pet wellness clinic: *The Other End of the Leash* Patricia McConnell, Ph.D., 2009-02-19 Learn to communicate with your dog—using their language “Good reading for dog lovers and an immensely useful manual for dog owners.”—The Washington Post An Applied Animal Behaviorist and dog trainer with more than twenty years’ experience, Dr. Patricia McConnell reveals a revolutionary new perspective on our relationship with dogs—sharing insights on how “man’s best friend” might interpret our behavior, as well as essential advice on how to interact with our four-legged friends in ways that bring out the best in them. After all, humans and dogs are two entirely different species, each shaped by its individual evolutionary heritage. Quite simply, humans are primates and dogs are canids (as are wolves, coyotes, and foxes). Since we each speak a different native tongue, a lot gets lost in the translation. This marvelous guide demonstrates how even the slightest changes in our voices and in the ways we stand can help dogs understand what we want. Inside you will discover: • How you can get your dog to come when called by acting less like a primate and more like a dog • Why the advice to “get dominance” over your dog can cause problems • Why “rough and tumble primate play” can lead to trouble—and how to play with your dog in ways that are fun and keep him out of mischief • How dogs and humans share personality types—and why most dogs want to live with benevolent leaders rather than “alpha wanna-bes!” Fascinating, insightful, and compelling, *The Other End of the Leash* is a book that strives to help you connect with your dog in a completely new way—so as to enrich that most rewarding of relationships.

low country pet wellness clinic: *Sepsis Management in Resource-limited Settings* Arjen M. Dondorp, Martin W. Dünser, Marcus J. Schultz, 2019-02-08 This book is open access under a CC BY 4.0 license. It constitutes a unique source of knowledge and guidance for all healthcare workers who care for patients with sepsis and septic shock in resource-limited settings. More than eighty percent of the worldwide deaths related to sepsis occur in resource-limited settings in low and middle-income countries. Current international sepsis guidelines cannot be implemented without adaptations towards these settings, mainly because of the difference in local resources and a different spectrum of infectious diseases causing sepsis. This prompted members of the Global Intensive Care working group of the European Society of Intensive Care Medicine (ESICM) and the Mahidol-Oxford Tropical Medicine Research Unit (MORU, Bangkok, Thailand) - among which the Editors - to develop with an international group of experts a comprehensive set of recommendations for the management of sepsis in resource-limited settings. Recommendations are based on both current scientific evidence and clinical experience of clinicians working in resource-limited settings. The book includes an overview chapter outlining the current challenges and future directions of sepsis management as well as general recommendations on the structure and organization of intensive care services in resource-limited settings. Specific recommendations on the recognition and management of patients with sepsis and septic shock in these settings are grouped into seven chapters. The book provides evidence-based practical guidance for doctors in low and middle income countries treating patients with sepsis, and highlights areas for further research and discussion.

low country pet wellness clinic: *Best Care at Lower Cost* Institute of Medicine, Committee on the Learning Health Care System in America, 2013-05-10 America's health care system has become too complex and costly to continue business as usual. *Best Care at Lower Cost* explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009-roughly \$750 billion-was wasted on unnecessary services, excessive administrative costs, fraud, and other problems. Moreover, inefficiencies cause needless suffering. By one estimate, roughly 75,000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train, practice, and learn new information cannot keep pace with the flood of research discoveries and technological advances. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapies, which can increase the potential for miscommunication, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. *Best Care at Lower Cost* emphasizes that a better use of data is a critical element of a continuously improving health system, such as mobile technologies and electronic health records that offer significant potential to capture and share health data better. In order for this to occur, the National Coordinator

for Health Information Technology, IT developers, and standard-setting organizations should ensure that these systems are robust and interoperable. Clinicians and care organizations should fully adopt these technologies, and patients should be encouraged to use tools, such as personal health information portals, to actively engage in their care. This book is a call to action that will guide health care providers; administrators; caregivers; policy makers; health professionals; federal, state, and local government agencies; private and public health organizations; and educational institutions.

low country pet wellness clinic: Underdogs Arnold Arluke, Andrew Rowan, 2020-12-01

Underdogs looks into the rapidly growing initiative to provide veterinary care to underserved communities in North Carolina and Costa Rica and how those living in or near poverty respond to these forms of care. For many years, the primary focus of the humane community in the United States was to control animal overpopulation and alleviate the stray dog problem by euthanizing or sterilizing dogs and cats. These efforts succeeded by the turn of the century, and it appeared as though most pets were being sterilized and given at least basic veterinary care, including vaccinations and treatments for medical problems such as worms or mange. However, in recent years animal activists and veterinarians have acknowledged that these efforts only reached pet owners in advantaged communities, leaving over twenty million pets unsterilized, unvaccinated, and untreated in underserved communities. The problem of getting basic veterinary services to dogs and cats in low-income communities has suddenly become spotlighted as a major issue facing animal shelters, animal rescue groups, animal control departments, and veterinarians in the United States and abroad. In the past five to ten years, animal protection organizations have launched a new focus trying to deliver basic and even more advanced veterinary care to the many underserved pets in the United States. These efforts pose a challenge to these groups as does pet keeping to people living in poverty across most of the world who have pets or care for street dogs.

low country pet wellness clinic: Islands Anne Rivers Siddons, 2009-10-13 "Anne Rivers Siddons's novels are women's stories in the best sense, pulling you into the internal landscape of her characters' lives and holding you there." – People A poignant novel of the love that unites us and the secrets that drive us apart, *Islands* is New York Times bestselling author Anne Rivers Siddons at her lyrical best—a glorious evocation of the people and the place she knows so well. Anny Butler is a caretaker, a nurturer, first for her own brothers and sisters, and then as a director of an agency devoted to the welfare of children. What she has never had is a real family. That changes when she meets and marries Lewis Aiken, an exuberant surgeon fifteen years older than Anny. When they marry, she finds her family—not a traditional one, but a group of Charleston childhood friends who are inseparable, who are one another's surrogate family. They are called the Scrubs, and they all, in some way, have the common cord of family. Instantly upon meeting them at the old beach house on Sullivan's Island, which they co-own, Anny knows that she has found home and family. They vow that, when the time comes, they will find a place where they can live together by the sea. Bad things begin to happen—a hurricane, a fire, deaths—but still the remaining Scrubs cling together. They are watched over and bolstered by Camilla Curry, the heart and core of their group, always the healer. Anny herself allows Camilla to enfold and to care for her. It is the first time she has felt this kind of love and support.

This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Testosterone provides the hormonal foundation for masculinity, determining what it means to be male. So what does a global decline in testosterone levels say about the current generation of men? Why is the greatest testosterone decline seen in American men under the age of thirty? A broken, reactive medical system isn't concerning itself with answering these questions. The medical profession classifies testosterone loss as testicular dysgenesis syndrome. Calling a condition a syndrome, however, is just a fancy medical term for we don't know why this is happening. When a condition is classified as a syndrome, the symptoms receive treatment, not the cause. Nathan Goodyear, MD rejects reactive approaches to testosterone loss, as well as the pharmacological marketing that sees low testosterone as the latest cash cow. Instead, he offers a solution. Dr. Goodyear argues that low testosterone results from eight specific causes, backing up his claim with hard scientific facts and outlining treatment options for each cause. With proper treatment, low testosterone levels can be reversed.

low country pet wellness clinic: Neurological, Psychiatric, and Developmental Disorders Institute of Medicine, Board on Global Health, Committee on Nervous System Disorders in Developing Countries, 2001-01-01 Brain disorders—neurological, psychiatric, and developmental—now affect at least 250 million people in the developing world, and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.

This book highlights the unprecedented opportunity to improve the lives of children and families in developing countries by preventing some birth defects and reducing the consequences of others. A number of developing countries with more comprehensive health care systems are making significant progress in the prevention and care of birth defects. In many other developing countries, however, policymakers have limited knowledge of the negative impact of birth defects and are largely unaware of the affordable and effective interventions available to reduce the impact of certain conditions. Reducing Birth Defects: Meeting the Challenge in the Developing World includes descriptions of successful programs and presents a plan of action to address critical gaps in the understanding, prevention, and treatment of birth defects in developing countries. This study also recommends capacity building, priority research, and institutional and global efforts to reduce the incidence and impact of birth defects in developing countries.
