What is Activity Analysis in Occupational Therapy?

Activity analysis is the systematic process of breaking down an activity into its constituent parts to understand the demands it places on the individual. It goes beyond simply observing the activity; it requires a deep dive into the steps involved, the required skills, and the environmental factors that influence successful performance. This detailed examination allows occupational therapists to identify potential barriers to participation and tailor interventions to meet specific client needs. It's a foundational skill for effective practice.

Key Components of a Thorough Activity Analysis:

Before diving into specific examples, let's review the essential components of a robust activity analysis:

Identifying the Activity: Clearly define the activity. Be specific. Instead of "eating," consider "eating a bowl of soup with a spoon."

Steps of the Activity: Break the activity into sequential steps. Be meticulous. This forms the foundation of your analysis.

Objects Used: List all the materials and tools required. Include specifics like the type of spoon, the size of the bowl, etc.

Space Demands: Describe the physical environment needed for the activity. This includes the size of the space, lighting, temperature, and surface considerations.

Social Demands: Outline the social interaction required. Is it a solitary activity or does it involve interaction with others? What social skills are needed?

Sequencing and Timing: Analyze the temporal aspects. Are there specific steps that must occur in a particular order? What is the typical duration of the activity?

Required Body Functions: Identify the physical and mental abilities necessary for successful task completion. This includes muscle strength, range of motion, cognitive skills, and more.

Required Body Structures: List the anatomical parts needed for the activity.

For example, making a cup of tea might require the use of hands, arms, and legs.

Performance Skills: Consider the client's motor skills, process skills, and social interaction skills needed for successful completion.

Activity Analysis Examples: A Practical Approach

Let's explore diverse activity analysis examples across different occupational therapy settings:

1. Dressing (Buttoning a Shirt):

Activity: Buttoning a shirt.

Steps: 1. Hold the shirt. 2. Locate the first buttonhole. 3. Insert the button into the buttonhole. 4. Push the button through the buttonhole. 5. Repeat steps 2-4 for each button.

Objects: Shirt, buttons.

Space Demands: Stable surface to sit or stand.

Social Demands: None (typically a personal activity).

Body Functions: Fine motor skills, visual perception, hand dexterity.

Body Structures: Hands, fingers, arms, eyes.

Performance Skills: Fine motor control, visual-motor coordination. This analysis helps therapists assess difficulties with fine motor skills, visual-perception, and coordination. Interventions might include adaptive equipment (larger buttons), strengthening exercises, or sensory input techniques.

1. Meal Preparation (Making a Sandwich):

Activity: Making a simple peanut butter and jelly sandwich.

Steps: 1. Gather ingredients (bread, peanut butter, jelly, knife). 2. Open bread package. 3. Spread peanut butter on one slice. 4. Spread jelly on the other slice. 5. Put the slices together.

Objects: Bread, peanut butter, jelly, knife, plate.

Space Demands: Countertop space, clean area.

Social Demands: None (unless shared with others).

Body Functions: Gross and fine motor skills, cognitive skills (sequencing).

Body Structures: Hands, arms, shoulders.

Performance Skills: Bilateral integration, planning, problem-solving. This reveals potential challenges with dexterity, bilateral coordination, cognitive sequencing, and safety awareness. Interventions could involve modifying the ingredients (e.g., using squeezable containers), adaptive equipment (e.g., easy-grip utensils), or cognitive strategies to improve sequencing.

1. Computer Use (Typing an Email):

Activity: Typing a short email.

Steps: 1. Turn on computer. 2. Log in. 3. Open email program. 4. Compose email (type subject and body). 5. Send email.

Objects: Computer, keyboard, mouse.

Space Demands: Desk, chair, adequate lighting.

Social Demands: Potentially involves communication with another person via email.

Body Functions: Fine motor skills, visual perception, cognitive skills (writing, planning).

Body Structures: Hands, fingers, eyes, arms.

Performance Skills: Fine motor control, keyboarding skills, cognitive skills (planning, organization). Analysis highlights issues with typing speed, accuracy, posture, and visual-motor integration. Interventions might include ergonomic assessments, adaptive keyboard techniques, or assistive technology.

1. Household Chores (Laundry):

Activity: Doing a load of laundry.

Steps: 1. Gather dirty clothes. 2. Sort clothes. 3. Load washing machine. 4. Add detergent. 5. Start washer. 6. Transfer clothes to dryer. 7. Start dryer. 8. Fold and put away clothes.

Objects: Washing machine, dryer, laundry basket, detergent.

Space Demands: Laundry room, access to utilities.

Social Demands: Minimal, unless sharing laundry facilities.

Body Functions: Gross motor skills, strength, endurance, cognitive skills (sequencing).

Body Structures: Legs, arms, hands.

Performance Skills: Endurance, planning, organization. This shows potential limitations in strength, endurance, or cognitive planning. Interventions could include energy conservation techniques, adaptive equipment (e.g., laundry cart), or modifications to the task itself.

activity analysis examples occupational therapy: Occupational Therapy Practice Framework: Domain and Process Aota, 2014 As occupational therapy celebrates its centennial in 2017, attention returns to the profession's founding belief in the value of therapeutic occupations as a way to remediate illness and maintain health. The founders emphasized the importance of establishing a therapeutic relationship with each client and designing an intervention plan based on the knowledge about a client's context and environment, values, goals, and needs. Using today's lexicon, the profession's founders proposed a vision for the profession that was occupation based, client centered, and evidence based--the vision articulated in the third edition of the Occupational Therapy Practice Framework: Domain and Process. The Framework is a must-have official document from the American Occupational Therapy Association. Intended for occupational therapy practitioners and students, other health care professionals, educators, researchers, payers, and consumers, the Framework summarizes the interrelated constructs that describe occupational therapy practice. In addition to the creation of a new preface to set the tone for the work, this new edition includes the following highlights: a redefinition of the overarching statement describing occupational therapy's domain; a new definition of clients that includes persons, groups, and populations; further delineation of the profession's relationship to organizations; inclusion of activity demands as part of the process; and even more up-to-date analysis and guidance for today's occupational therapy practitioners. Achieving health, well-being, and participation in life through engagement in occupation is the overarching statement that describes the domain and process of occupational therapy in the fullest sense. The Framework can provide the structure and guidance that practitioners can use to meet this important goal.

activity analysis examples occupational therapy: The Changing Nature of Work National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Techniques for the Enhancement of Human Performance: Occupational Analysis, 1999-09-07 Although there is great debate about how work is changing, there is a clear consensus that changes are fundamental and ongoing. The Changing Nature of Work examines the evidence for change in the world of work. The committee provides a clearly illustrated framework for understanding changes in work and these implications for analyzing the structure of occupations in both the civilian and military sectors. This volume explores the increasing demographic diversity of the workforce, the fluidity of boundaries between lines of work, the interdependent choices for how work is structured-and ultimately, the need for an integrated systematic approach to understanding how work is changing. The book offers a rich array of data and highlighted examples on: Markets, technology, and many other external conditions affecting the nature of work. Research findings on American workers and how they feel about work. Downsizing and the trend toward flatter organizational hierarchies. Autonomy, complexity, and other aspects of work structure. The committee reviews the evolution of occupational analysis and examines the effectiveness of the latest systems in characterizing current and projected changes in civilian and military work. The occupational structure and changing work requirements in the Army are presented as a case study.

activity analysis examples occupational therapy: Frames of Reference for Pediatric Occupational Therapy Paula Kramer, 2018-12-07 Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. Frames of Reference for Pediatric Occupational Therapy, Fourth Edition, uses frames of reference for diagnostic categories (neuro-development, social participation, etc.) as effective blueprints for applying theory to pediatric OT practice. Updated with new chapters, case examples, and a new focus on evidence-based practice. This proven approach helps students understand the “why” of each frame of reference before moving on to the “how” of creating effective treatment programs to help pediatric clients lead richer, fuller lives. The book first covers the foundations of frames reference for pediatric OT (Section I), and then covers commonly used frames of reference such as motor skill acquisition, biomechanical, and sensory integration (Section II). A final section discusses newer focused/specific frames of reference like handwriting skills and social participation. A standardized format within each frame of reference chapter covers the same elements (Theoretical Base, Supporting Evidence, the Function/Dysfunction Continuum, Guide to Evaluation, and Application to Practice) to help students build the knowledge and skills needed for effective practice.

activity analysis examples occupational therapy: Occupational Therapy Practice Guidelines for Early Childhood Gloria Frolek Clark, Karrie Kingsley, 2013-01-01 Currently in the United States, 20% of children ages 6 years or younger live in poverty. Poor children have fewer opportunities than their peers to resources that are important for child development. At the same time, the prevalence of developmental disabilities has increased to 1 in every 6 children. Early identification of developmental delays is critical, and more than half of all American parents do not know the warning signs. Occupational therapy professionals in early intervention and preschool practice can provide the necessary services to support children's health in early childhood. This Practice Guideline explains the occupational therapy process for young children--and their families, caregivers, and teachers--which includes evaluation, intervention, and outcomes planning to enhance a child's occupational performance, adaptation, health and wellness, community participation, role competence, and self-advocacy. Topics include social-emotional development; feeding, eating, and swallowing; cognitive and motor development; service delivery; autism; obesity, cerebral palsy; and parent training. This work can help occupational therapy practitioners, as well as those who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy in evaluating and serving young children. This guideline can

also serve as a resource for parents, school administrators, educators, and other early childhood staff.
