akira medical imaging wellness: *Methland* Nick Reding, 2009-07-01 A New York Times Bestseller Winner of the Chicago Tribune Heartland Prize Winner of the Hillman Prize for Book Journalism Named a best book of the year by: the Los Angeles Times the San Francisco Chronicle the Saint Louis Post-Dispatch the Chicago Tribune the Seattle Times A stunning look at a problem that has dire consequences for our country."-New York Post The dramatic story of Methamphetamine as it comes to the American Heartland-a timely, moving, account of one community's attempt to confront the epidemic and see their way to a brighter future. Crystal methamphetamine is widely considered to be the most dangerous drug in the world, and nowhere is that more true than in the small towns of the American heartland. Methland is the story of the drug as it infiltrates the community of Oelwein, Iowa (pop. 6,159), a once-thriving farming and railroad community. Tracing the connections between the lives touched by meth and the global forces that have set the stage for the epidemic, Methland offers a vital and unique perspective on a pressing contemporary tragedy. Oelwein, Iowa is like thousand of other small towns across the county. It has been left in the dust by the consolidation of the agricultural industry, a depressed local economy and an out-migration of people. If this wasn't enough to deal with, an incredibly cheap, long-lasting, and highly addictive drug has come to town, touching virtually everyone's lives. Journalist Nick Reding reported this story over a period of four years, and he brings us into the heart of the town through an ensemble cast of intimately drawn characters, including: Clay Hallburg, the town doctor, who fights meth even as he struggles with his own alcoholism; Nathan Lein, the town prosecutor, whose case load is filled almost exclusively with meth-related crime, and Jeff Rohrick, who is still trying to kick a meth habit after four years. Methland is a portrait of a community under siege, of the lives the drug has devastated, and of the heroes who continue to fight the war. It will appeal to readers of David Sheff's bestselling Beautiful Boy, and serve as inspiration for those who believe in the power of everyday people to change their world for the better.

akira medical imaging wellness: Secondhand Smoke Exposure and Cardiovascular Effects Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Secondhand Smoke Exposure and Acute Coronary Events, 2010-02-21 Data suggest that exposure to secondhand smoke can result in heart disease in nonsmoking adults. Recently, progress has been made in reducing involuntary exposure to secondhand smoke through legislation banning smoking in workplaces, restaurants, and other public places. The effect of legislation to ban smoking and its effects on the cardiovascular health of nonsmoking adults, however, remains a question. Secondhand Smoke Exposure and Cardiovascular Effects reviews available scientific literature to assess the relationship between secondhand smoke exposure and acute coronary events. The authors, experts in secondhand smoke exposure and toxicology, clinical cardiology, epidemiology, and statistics, find that there is about a 25 to 30 percent increase in the risk of coronary heart disease from exposure to secondhand smoke. Their findings agree with the 2006 Surgeon General's Report conclusion that there are increased risks of coronary heart disease morbidity and mortality among men and women exposed to secondhand smoke. However, the authors note that the evidence for determining the magnitude of the relationship between chronic secondhand smoke exposure and coronary heart disease is not very strong. Public health professionals will rely upon Secondhand Smoke Exposure and Cardiovascular Effects for its survey of critical epidemiological studies on the effects of smoking bans and evidence of links between secondhand smoke exposure and cardiovascular events, as well as its findings and recommendations.

akira medical imaging wellness: Hype Nina Shapiro, Kristin Loberg, 2018-05-01 “[A] top doctor. . . cuts through the clutter of confusion when it comes to the best advice for your health. . . . Every home should have a copy of Hype.” —Sanjay Gupta, MD, CNN Chief Medical Correspondent and New York Times–bestselling author There is a lot of misinformation thrown around these days, especially online. Headlines tell us to do this, not that—all in the name of living longer, better, thinner, younger. Dr. Shapiro wants to distinguish between the falsehoods and the evidence-backed truth. In her work at Harvard and UCLA, with more than twenty years of experience in both clinical and academic medicine, she helps patients make important health decisions every day. She’s bringing those lessons to life here with a blend of personal storytelling and science to discuss her dramatic new definition of “a healthy life.” Hype covers everything from exercise to supplements, alternative medicine to vaccines, and medical testing to media coverage. Shapiro tackles popular misconceptions such as toxic sugar and the importance of drinking eight glasses of water a day. She provides simple solutions anyone can implement, such as drinking 2% milk instead of fat free and

using SPF 30 sunscreen instead of SPF 100. This book is as much for single individuals in the prime of their lives as it is for parents with young children and the elderly. akira medical imaging wellness: Hospital-Based Health Technology Assessment Laura Sampietro-Colom, Janet Martin, 2017-01-23 A timely work describing how localized hospital-based health technology assessment (HB-HTA) complements general, 'arms-length' HTA agency efforts, and what has been the collective global impact of HB-HTA across the globe. While HB-HTA has gained significant momentum over the past few years, expertise in the field, and information on the operation and organization of HB-HTA, has been scattered. This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital, regional, national or global level. In addition, this book is intended for decision-makers and policy-makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting. HTA has traditionally been performed at the National/Regional level by HTA Agencies, typically linked to governments. Yet hospitals are the main entry door for most health technologies (HTs). Hospital decision-makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs, usually without adequate information. Despite the existence of arms-length HTA Agencies, inadequate information is available to hospital decision-makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field, or because even when the report exists, the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers. Therefore, there has recently been a rising trend toward hospital-based HTA units and programs. These units/programs complement the work of National/Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context, and within required decision-making timelines. The emergence of HB-HTA is creating a comprehensive HTA ecosystem across health care levels, which creates better bridges for knowledge translation through relevance and timeliness.

The anatomy of each site and patterns of lymphatic drainage are discussed, and their influence on the design of CTVs is explained in detail. Utilization of other imaging modalities, including MRI, to delineate volumes is highlighted. Key details of simulation and planning are briefly reviewed. Although the emphasis is on target volume delineation for conformal techniques, information is also provided on conventional radiation field setup and design when IMRT is not suitable.
