However, when abstract concepts are introduced, students often hit a wall. Instructors seem to agree that certain concepts (such as linear independence, spanning, subspace, vector space, and linear transformations) are not easily understood and require time to assimilate. These concepts are fundamental to the study of linear algebra, so students' understanding of them is vital to mastering the subject. This text makes these concepts more accessible by introducing them early in a familiar, concrete setting, developing them gradually, and returning to them throughout the text so that when they are discussed in the abstract, students are readily able to understand.

math1112 precal with algebra: Intermediate Algebra Julie Miller, Molly O'Neill, Nancy Hyde, 2021 Julie Miller, Molly O'Neill, and Nancy Hyde originally wrote their developmental math series because students were entering their College Algebra course underprepared. The students were not mathematically mature enough to understand the concepts of math, nor were they fully engaged with the material. The authors began their developmental mathematics offerings with intermediate algebra to help bridge that gap. This in turn developed into several series of textbooks from Prealgebra through Precalculus to help students at all levels before Calculus--

math1112 precal with algebra: Algebra for the Urban Student Canaa Lee, 2012-05-15 *Algebra for the Urban Student* offers an algebra textbook for the typical math student. In many cases, such textbooks are written for people who love mathematics and understand the jargon. Teacher Canaa Lee has incorporated her personal experiences as a high school mathematics teacher into a textbook that is specially geared toward students needs. Most students dislike mathematics because the subject has always been difficult for them to master. With this in mind, *Algebra for the Urban Student* builds on methods Lee has used successfully in her classroom to motivate her students to a better more practical understanding of math. When students need to learn math concepts, they can turn to a clearly written, easy-to-use guide to help them complete their assignments. Each chapter in *Algebra for the Urban Student* illustrates a significant algebra concept, such as solving linear equations and inequalities or finding the slope of a line. The chapters also include homework assignments that provide students with the opportunity to demonstrate their understanding of the concept explained in that chapter. In addition, there are real-world projects for both algebra and geometry and guides for whole and small class discussions. *Algebra for the Urban Student* insures that every student has the information they need to succeed at mathematics.

math1112 precal with algebra: Pre-Algebra Judith Atkinson, 2014-12-31 *Pre-Algebra: Keeping It Simple* provides students with a highly accessible approach to foundational mathematical

concepts. The text is designed to help students develop basic math skills that will prepare them to succeed in more advanced algebra courses. The text begins with a review of mathematical processes related to whole numbers, including adding, subtracting, multiplying, dividing, rounding, and estimation. The following chapter focuses on integers with coverage of exponents, order of operations, absolute value, and square roots. In later chapters, students learn mathematical processes related to fractions and decimals. The final chapter provides students with an introduction to algebra, including working with variables, simplifying expressions, solving linear equations, and understanding proportions. Throughout, the text features emphasis on application, demonstrating real-world use of the concepts in everyday life and other academic disciplines. Practice exams at the end of each chapter help students test their knowledge and reinforce key learnings. Approachable in nature and written to help students master critical knowledge, Pre-Algebra is well suited for beginning courses in the discipline. It is an excellent choice for bridging or fast-track programs. Judith Atkinson earned her master's degree in mathematics and her Ph.D. in civil engineering at the University of Alaska, Fairbanks, where she currently teaches both face-to-face and online courses as a tenured professor. Her main focus has been developmental level algebra courses. Dr. Atkinson also teaches a math course for non-science majors, business algebra and calculus, and math for elementary school teachers. She helped develop the UAF Math Fast Track program and coauthored a textbook to go along with the program. Prior to entering the field of teaching, Dr. Atkinson worked as a civil engineer for the Alaska Department of Transportation.
