navision accounting: Fraud Investigation and Forensic Accounting in the Real World William L. Jennings, 2022-05-22 This book covers every aspect of forensic accounting, anti-fraud control systems, and fraud investigations. The author uses his own case experience to guide the reader through each phase of a forensic accounting assignment and fraud investigation. The book opens with an explanation of what happened to a company that was ensnared in a huge commodity purchasing scheme. Using his knowledge and experience gained over 40 years, the author illustrates that unexpected fraud occurrences can happen to any company, in any industry. Additionally, the author explains the current white-collar crime threats that organizations face every day, as well as legal issues that are often implicated in forensic accounting and fraud investigation projects. Electronic and non-electronic evidence gathering is also covered in detail with illustrative examples. One chapter is devoted entirely to the often misunderstood, but extremely important, subject of witness interviews. It provides the correct approach to the analysis and correlation of evidence in determining findings and conclusions of an investigation. Another chapter is devoted to proper report writing. The author provides detailed guidance on presenting findings to a variety of audiences, including management, a board, law enforcement, and at trials and hearings. It also covers proper techniques for measuring economic damages and concludes with a useful index. William L. Jennings is a Senior Director at Delta Consulting Group. He is responsible for providing forensic accounting, investigation, and asset recovery services to corporations, government agencies, attorneys, and their clients, as well as business controls consulting services to organizations. navision accounting: Enterprise & Business Management Alptekin Erkollar, 2011-11-01 Organizations have always been dependent on communication, information, technology, and their management. The development of information technology has sped up the importance of business informatics, which is an emerging discipline combining various aspects of informatics, information technology, and business management. Understanding the impact of information on today's organizations requires technological and managerial views, which are both offered by business informatics. Business management is not only about generating greater returns and using new technologies for developing businesses to reach future goals. Business management also means

generating better revenue performance if plans are diligently followed. It is part of business management to have an ear to the ground of global economic trends, changing environmental conditions and preferences, as well as the behavior of value chain partners. While, until now, business management and business informatics are mostly treated as independent fields, this publication takes an interest in the cooperation of the two. Its contributions focus on both research areas and practical approaches, in turn showing novelties in the area of enterprise and business management. Among the other topics covered in this book are strategic management, contact relationship management, corporate social responsibility, corporate blogging, enterprise resource planning, E-business management, E-learning, balanced scorecarding, logistics, operations research, enterprise and software architectures, and social software systems. This book adopts an international view, combines theory and practice, and is authored for researchers and lecturers as well as consultants and practitioners.

The Financial Conduct Authority has the primary responsibility for the regulation and supervision of fund management and equity trading platforms.

navision accounting: Chinese Capital Market Takeover and Restructuring Guide Chengwei Liu, 2010-12-22 Although several useful entry guides to China for business investors have appeared in recent years, this is the first book to focus on a business strategy that is becoming increasingly important – and attractive – to businesses in China: the takeover and restructuring of a listed company. This practice orientated book has an additional value, moreover, in that it fully takes into account not only the relevant regulations, most of which were promulgated or updated from 2005 to 2010, but also the actual structures and procedures of nearly ninety announced deals, right up to September 2010. In unprecedented details, the author, an experienced M&A lawyer, describes China specific takeover and restructuring cases involving foreign investors as well as state-owned shareholders on the Shanghai Stock Exchange, the Shenzhen Stock Exchange and 'ChiNext'. The presentation and analysis covers such elements as the following: the standard bids, such as tender offers, negotiated transfers, indirect takeovers and subscriptions for new shares; the special accesses available to a foreign investor such as qualifying as a 'strategic investor' or 'qualified foreign institutional investor' (QFII); the particular situations where 'state-owned shareholder' (SS) is involved or where a share exchange occurs, including where a foreign investor subscribes by injecting, or acquires indirectly via, its 'onshore foreign invested enterprise'; the basic restructuring approaches of a listed company – public offering and private placement; and the full meaning and significance of the 'substantial asset restructuring' (SAR), which may be asset purchases, disposals or swaps, or the SAR in special cases – merger or separation deals. The author's illustration of deal structures and step-by-step procedures, visualized in over 150 charts and checklists, gives the reader a clear path to follow through what can seem like a forbiddingly difficult process – a path rendered more secure by the deal histories presented. For companies with operations in China, or considering such operations, as well as professionals advising on these companies, this book is a goldmine of crucially valuable information and guidance. There is nothing else available that comes close to its authority or expertise in this area.
