nyu accounting: NYU'S Stern School of Business Abraham L Gitlow, 1995-06-01 American business schools from their inception in the 1880's, have grown dramatically both in quality and in numbers. Regarded as late as the 1950's as essentially vocational schools whose role in academia was still to be resolved, they are now among the most respected professional schools in the university community. In recent decades, this increase in prestige has been matched by the growth of both Bachelor's and MBA programs. The forces and events shaping this dramatic rise in importance have been recounted by Dean Emeritus of New York University's Stern School of Business, Abraham L. Gitlow. He brings his 45 years of experience as a faculty member at the Stern School to bear as he analyzes the educational and philosophical issues and tensions that marked the history of the school, and of American higher education in general, in the twentieth century.

nyu accounting: Coal, Cages, Crisis Judah Schept, 2022-04-12 How prisons became economic development strategies for rural Appalachian communities As the United States began the project of mass incarceration, rural communities turned to building prisons as a strategy for economic development. More than 350 prisons have been built in the U.S. since 1980, with certain regions of the country accounting for large shares of this dramatic growth. Central Appalachia is one such region; there are eight prisons alone in Eastern Kentucky. If Kentucky were its own country, it would have the seventh highest incarceration rate in the world. In Coal, Cages, Crisis, Judah Schept takes a closer look at this stunning phenomenon, providing insight into prison growth, jail expansion and rising incarceration rates in America’s hinterlands. Drawing on interviews, site visits, and archival research, Schept traces recent prison growth in the region to the rapid decline of its coal industry. He takes us inside this startling transformation occurring in the coalfields, where prisons are often built on top of old coalmines, including mountaintop removal sites, and built into community planning approaches to crises of unemployment, population loss, and declining revenues. By linking prison growth to other sites in this landscape—coal mines, coal waste, landfills, and incinerators—Schept shows that the prison boom has less to do with crime and punishment and much more with the overall extraction, depletion, and waste disposal processes that characterize dominant development strategies for the region. Schept argues that the future of this area now hangs in the balance, detailing recent efforts to oppose its carceral growth. Coal, Cages, Crisis offers invaluable insight into the complex dynamics of mass incarceration that continue to shape Appalachia and the broader United States.

nyu accounting: *The Book of Collateral Damage* Sinan Antoon, 2019-05-28 Sinan Antoon returns to the Iraq war in a poetic and provocative tribute to reclaiming memory Widely-celebrated author Sinan Antoon’s fourth and most sophisticated novel follows Nameer, a young Iraqi scholar earning his doctorate at Harvard, who is hired by filmmakers to help document the devastation of the 2003 invasion of Iraq. During the excursion, Nameer ventures to al-Mutanabbi street in Baghdad, famed for its bookshops, and encounters Wadood, an eccentric bookseller who is trying to catalogue everything destroyed by war, from objects, buildings, books and manuscripts, flora and fauna, to humans. Entrusted with the catalogue and obsessed with Wadood’s project, Nameer finds life in New York movingly intertwined with fragments from his homeland’s past and its present—destroyed letters, verses, epigraphs, and anecdotes—in this stylistically ambitious panorama of the wreckage of war and the power of memory.

nyu accounting: *Narrative and Numbers* Aswath Damodaran, 2017-01-10 How can a company that has never turned a profit have a multibillion dollar valuation? Why do some start-ups attract large investments while others do not? Aswath Damodaran, finance professor and experienced investor, argues that the power of story drives corporate value, adding substance to numbers and persuading even cautious investors to take risks. In business, there are the storytellers who spin compelling narratives and the number-crunchers who construct meaningful models and accounts. Both are essential to success, but only by combining the two, Damodaran argues, can a business deliver and sustain value. Through a range of case studies, Narrative and Numbers describes how storytellers can better incorporate and narrate numbers and how number-crunchers can calculate more imaginative models that withstand scrutiny. Damodaran considers Uber's debut and how narrative is key to understanding different valuations. He investigates why Twitter and Facebook were valued in the billions of dollars at their public offerings, and why one (Twitter) has stagnated while the other (Facebook) has grown. Damodaran also looks at more established business models such as Apple and Amazon to demonstrate how a company's history can both enrich and constrain its narrative. And through Vale, a global Brazil-based mining company, he shows the influence of external narrative, and how country, commodity, and currency can shape a company's story. Narrative and Numbers reveals the benefits, challenges, and pitfalls of weaving narratives around numbers and how one can best test a story's plausibility.

nyu accounting: The Great Reversal Thomas Philippon, 2019-10-29 A Financial Times Book of the Year A ProMarket Book of the Year “Superbly argued and important...Donald Trump is in so many ways a product of the defective capitalism described in The Great Reversal. What the U.S. needs, instead, is another Teddy Roosevelt and his energetic trust-busting. Is that still imaginable? All believers in the virtues of competitive capitalism must hope so.” —Martin Wolf, Financial Times “In one industry after another...a few companies have grown so large that they have the power to keep prices high and wages low. It’s great for those corporations—and bad for almost everyone else.” —David Leonhardt, New York Times “Argues that the United States has much to gain by reforming how domestic markets work but also much to regain—a vitality that has been lost since the Reagan years...His analysis points to one way of making America great again: restoring our free-market competitiveness.” —Arthur Herman, Wall Street Journal Why are cell-phone plans so much more expensive in the United States than in Europe? It seems a simple question, but the search for an answer took one of the world’s leading economists on an unexpected journey through some of the most hotly debated issues in his field. He reached a surprising conclusion: American markets, once a model for the world, are giving up on healthy competition. In the age of Silicon Valley start-ups and millennial millionaires, he hardly expected this. But the data from his cutting-edge research proved undeniable. In this compelling tale of economic detective work, we follow Thomas Philippon as he works out the facts and consequences of industry concentration, shows how lobbying and campaign contributions have defanged antitrust regulators, and considers what all this means. Philippon argues that many key problems of the American economy are due not to the flaws of capitalism or globalization but to the concentration of corporate power. By lobbying against competition, the biggest firms drive profits higher while depressing wages and limiting opportunities for investment, innovation, and growth. For the sake of ordinary Americans, he concludes, government needs to get back to what it once did best: keeping the playing field level for competition. It’s time to make American markets great—and free—again.

nyu accounting: *#BlackInSchool* Habiba Cooper Diallo, 2021 A firsthand account of systemic anti-Black racism in Canadian schools The prevalence of anti-Black racism and its many faces, from racial profiling to police brutality, in North America is indisputable. How do we stop racist ideas and violence if the very foundation of our society is built upon white supremacy? How do we end systemic racism if the majority do not experience it or question its existence? Do our schools instill children with the ideals of equality and tolerance, or do they reinforce differences and teach children of colour that they don't belong? #BlackInSchool is Habiba Cooper Diallo's high school journal, in which she documents, processes, and resists the systemic racism, microaggressions, stereotypes, and outright racism she experienced in Canada's education system. Powerful and eye-opening, Cooper Diallo illustrates how our schools reinforce rather than erode racism: the handcuffing and frisking of students of colour by police at school, one-dimensional, tokenistic curricula of Black people, and the constant barrage of overt racism from students and staff alike. She shows how systemic racism works, how it alienates and seeks to destroys a child's sense of self. She shows how our institutions work to erase the lived experiences of Black youth and tries to erase Black youth themselves. Cooper Diallo's words will resonate with some, but should shock, appall, and animate a great many more into action towards a society that is truly equitable for all.
