discipline, providing a discussion on key themes on human-animal interactions and their implications, along with recent major advances in research. Humans share the world with a bewildering variety of other animals, and have interacted with them in different ways. This variety of interactions (both past and present) is investigated through ethnozoology, which is a hybrid discipline structured with elements from both the natural and social sciences, as it seeks to understand how humans have perceived and interacted with faunal resources throughout history. In a broader context, ethnozoology, and its companion discipline, ethnobotany, form part of the larger body of the science of ethnobiology. In recent years, the importance of ethnozoological/ethnobiological studies has increasingly been recognized, unsurprisingly given the strong human influence on biodiversity. From the perspective of ethnozoology, the book addresses all aspects of human connection, animals and health, from its use in traditional medicine, to bioprospecting derivatives of fauna for pharmaceuticals, with expert contributions from leading researchers in the field. - Draws on editors' and contributors' extensive research, experience and studies covering ethnozoology and ethnobiology - Covers all aspects of human-animal interaction through the lens of this emerging discipline, with coverage of both domestic and wild animal topics - Presents topics of great interest to a variety of researchers including those in wildlife/conservation (biologists, ecologists, conservationists) and domestic-related disciplines (psychologists, sociologists)

pet wellness group florence ky: Complementary and Alternative Veterinary Medicine Considered David W. Ramey, Bernard E. Rollin, 2008-01-09 *Complementary and Alternative Veterinary Medicine Considered* is a book that belongs in your veterinary library. If you are a veterinarian wondering if you should incorporate complementary and alternative veterinary medicine (CAVM) into your practice, if you have recently hired an associate eager to try such things as acupuncture or homeopathy, or if you have clients asking you about chiropractic, herbal, or

magnetic field therapy for their pets, you'll want to understand the history, science and ethics behind such therapies. In its 2001 Guidelines for Complementary and Alternative Medicine, the American Veterinary Medical Association (AVMA) recognizes the growing interest in CAVM, and encourages the critical examination of these therapies using the scientific method. Following the AVMA's lead on this subject, *Complementary and Alternative Veterinary Medicine Considered* thoroughly examines a variety of CAVM therapies and asks important questions regarding alternative treatments. For example, is acupuncture effective in pain relief? What is homeopathy? What is the history behind chiropractic? What does the research say (and not say) about various CAVM modalities? And, just as importantly, what are the ethical and regulatory considerations concerning such therapies? This book has the answers to those questions and more. *Complementary and Alternative Veterinary Medicine Considered* will help practicing veterinarians to make informed decisions about specific CAVM therapies. This text evaluates various prevalent therapies, and will give veterinarians the ethical and scientific bases they need to make sound decisions regarding CAVM therapies. Coverage includes but is not limited to: Acupuncture and acupressure; Energy medicine; Manual therapy (chiropractic); Manual therapy (massage); Magnetic and electromagnetic therapy; Laser and light therapy; Homeopathy; and Herbal therapy.

Luigi Grassi, Michelle B. Riba, Thomas Wise, 2018-12-07 This book offers a resource to aid in implementing psychosocial screening, assessment, and consequently integrating prevention, care and treatment (i.e. pharmacological, psychosocial rehabilitation and psychotherapeutic) in medicine. It is becoming increasingly recognized that one method of combating spiraling health care costs in developed nations is to integrate psychiatric care into medicine including primary care settings. This volume reviews the main issues relative to the paradigm of a person-centered and recovery-oriented approach that should imbue all medical areas and specialties. It proposes integration methods in screening and assessment, clinimetric approach, dignity conserving care, cross-cultural and ethical aspects, treatment and training as a basic and mandatory need of a whole psychosomatic approach bridging the several specialties in medicine. As such, the book addresses a topic that all physicians, including primary care and psychiatric professionals in a wide variety of mental health settings are currently discussing, planning and preoccupied with, namely the task of integrating mental health into all the medical fields, including primary care, cardiology, psychiatry, oncology and so on.

pet wellness group florence ky: *HypnoBirthing, Fourth Edition* Marie Mongan, 2015-12-08 HypnoBirthing® has gained momentum around the globe as a positive and empowering method of childbirth. In fact, more than 25,000 books were sold in 2014 through the author's website alone, and according to Nielsen BookScan, over 70,000 were sold through reporting retailers since its publication in 2005. Here's why: HypnoBirthing helps women to become empowered by developing an awareness of the instinctive birthing capability of their bodies. It greatly reduces the pain of labor and childbirth; frequently eliminates the need for drugs; reduces the need for caesarian surgery or other doctor-controlled birth interventions; and it also shortens birthing and recovery time, allowing for better and earlier bonding with the baby, which has been proven to be vital to the mother-child bond. What's more, parents report that their infants sleep better and feed more easily when they haven't experienced birth trauma. HypnoBirthing founder Marie Mongan knows from her own four births that it is not necessary for childbirth to be a terribly painful experience. In this book she shows women how the Mongan Method works and how parents they can take control of the greatest and most important event of their lives. So, why is birth such a traumatic event for so many women? And why do more than 40% of births now end in caesarian section, the highest percentage in history? The answer is simple: because our culture teaches women to fear birth as a painful and unsettling experience. Fear causes three physical reactions in the body—tightening of the muscles, reduced blood flow to the birthing muscles, and the release of certain hormones—which increase the

pain and discomfort of childbirth. This is not hocus-pocus; this is science.

pet wellness group florence ky: Grandma Gatewood's Walk Ben Montgomery, 2014-04-01 Winner of the 2014 National Outdoor Book Awards for History/Biography Emma Gatewood told her family she was going on a walk and left her small Ohio hometown with a change of clothes and less than two hundred dollars. The next anybody heard from her, this genteel, farm-reared, 67-year-old great-grandmother had walked 800 miles along the 2,050-mile Appalachian Trail. And in September 1955, having survived a rattlesnake strike, two hurricanes, and a run-in with gangsters from Harlem, she stood atop Maine's Mount Katahdin. There she sang the first verse of America, the Beautiful and proclaimed, I said I'll do it, and I've done it. Grandma Gatewood, as the reporters called her, became the first woman to hike the entire Appalachian Trail alone, as well as the first person—man or woman—to walk it twice and three times. Gatewood became a hiking celebrity and appeared on TV and in the pages of Sports Illustrated. The public attention she brought to the little-known footpath was unprecedented. Her vocal criticism of the lousy, difficult stretches led to bolstered maintenance, and very likely saved the trail from extinction. Author Ben Montgomery was given unprecedented access to Gatewood's own diaries, trail journals, and correspondence, and interviewed surviving family members and those she met along her hike, all to answer the question so many asked: Why did she do it? The story of Grandma Gatewood will inspire readers of all ages by illustrating the full power of human spirit and determination. Even those who know of Gatewood don't know the full story—a story of triumph from pain, rebellion from brutality, hope from suffering.

Under the Tuscan Sun meets the wide-open sea . . . An Embarrassment of Mangoes is a delicious chronicle of leaving the type-A lifestyle behind -- and discovering the seductive secrets of life in the Caribbean. Who hasn't fantasized about chucking the job, saying goodbye to the rat race, and escaping to some exotic destination in search of sun, sand, and a different way of life? Canadians Ann Vanderhoof and her husband, Steve did just that. In the mid 1990s, they were driven, forty-something professionals who were desperate for a break from their deadline-dominated, career-defined lives. So they quit their jobs, rented out their house, moved onto a 42-foot sailboat called Receta ("recipe," in Spanish), and set sail for the Caribbean on a two-year voyage of culinary and cultural discovery. In lavish detail that will have you packing your swimsuit and dashing for the airport, Vanderhoof describes the sun-drenched landscapes, enchanting characters and mouthwatering tastes that season their new lifestyle. Come along for the ride and be seduced by Caribbean rhythms as she and Steve sip rum with their island neighbors, hike lush rain forests, pull their supper out of the sea, and adapt to life on "island time." Exchanging business clothes for bare feet, they drop anchor in 16 countries -- 47 individual islands -- where they explore secluded beaches and shop lively local markets. Along the way, Ann records the delectable dishes they encounter -- from cracked conch in the Bahamas to curried lobster in Grenada, from Dominican papaya salsa to classic West Indian rum punch -- and incorporates these enticing recipes into the text so that readers can participate in the adventure. Almost as good as making the journey itself, An Embarrassment of Mangoes is an intimate account that conjures all the irresistible beauty and bounty from the Bahamas to Trinidad -- and just may compel you to make a rash decision that will land you in paradise.

Pearson, 2011-01-15 What happens to orphan diseases that aren't big enough profit centers for the pharmaceutical industry or get caught in the web of government funding and academic research? Augie Nieto found out in the spring of 2005: At forty-seven years old he was diagnosed with ALS. Devastated, Augie struggled with depression and attempted suicide. When he awoke from a coma, with friends and family surrounding him, his sense of faith and mission were renewed. Fast-forward one year: Augie and his wife, Lynne, were profiled as Real Heroes on the Today show. Their determination to beat the disease had already led to major overhauls in the way ALS research was conducted. In partnership with the Muscular Dystrophy Association, Augie had set up a foundation and lab to coordinate and oversee ALS research and testing across the globe. By centralizing operations and championing an entrepreneurial approach to medical research, Augie and his team accomplished remarkable results in less than two years. Part inspiration, part business innovation, Augie's Quest illustrates how one person can make a meaningful difference. Praise for Augie Nieto: George H. W. Bush, former U.S. president: Your contributions to the fitness industry are well known, and your dedication an inspiration. Lance Armstrong, seven-time Le Tour de France champion: I think it says a lot about Augie, the fact that everybody came together regardless of whether or not it's for competing gyms or competing companies that make equipment. They all say, this is one of our own; this is a guy who's committed his life to our industry and has been dealt a serious blow. We're going to be there for him, we're going to say, we're here for you and we're part of the Quest. Arnold Schwarzenegger, governor of California: Your success has been incredible. pet wellness group florence ky: Food Safety Culture Frank Yiannas, 2008-12-10 Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed,

thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.
