E-Book Jean-Pierre Barral, Alain Croibier, 2011-06-15 This work demonstrates a novel approach to visceral osteopathy. Basing their ideas on anatomy and physiology, Jean-Pierre Barral and Alain Croibier propose manipulation of the arteries to treat the intestines and other internal organs by increasing their blood flow. The arteries, elastic and muscular in structure, and the innumerable nerve filaments which surround them, react ideally to manual treatment. To be effective, however, these manipulations must be specific and precise. Thanks to the authors' long experience as therapists, their mastery of osteopathic techniques and the aid of ultrasound technology, they have devised innovative techniques to improve the visceral vascular circulation. In this book the authors show the various sites of the principle pulses of the body and summarise the physiology of the circulation of the blood. The main organs and their physiology are addressed and include the heart, pancreas, small intestine, colon and other abdominal structures as well as the regions of the neck, skull and pelvic cavity. Rich in detailed, high quality illustrations, this book serves as both an anatomical reference and a guide to carrying out visceral vascular manipulations in the most effective way possible. The work is aimed at experienced osteopaths as well as those in training, and at other manual therapists who wish to widen their scope. - Offers practical and clinically relevant information to all practitioners and therapists working in the field - Abundant use of pull-out boxes, line artwork, photographs and tables facilitates ease of understanding - Prepared by experts of international renown - Covers treatment of the main organs including the heart, pancreas, small intestine, colon and other abdominal structures as well as the regions of the neck, skull and pelvic cavity - Serves as both an anatomical reference and a guide to carrying out visceral vascular manipulations in the most effective way possible - Suitable for osteopathic physicians and osteopaths, chiropractors, physical therapists, manual therapists, physiotherapists, and massage
