Full facsimile of the original edition and not reproduced with Optical Recognition software. The scientific use of light to heal the body in modern times was predominantly an invention of nineteenth-century health reformers; and while the religion of the ancient Egyptians was far from most of the minds of practitioners of light therapy, they were nevertheless participating in an ancient practice of looking to the sun for health. In his 1910 work, *Light Therapeutics*, Kellogg summed up the short history of light therapy (also called phototherapy or heliotherapy) yet also recognized its ancient roots: Heliotherapy, or the use of sunlight as a curative means, is one of the oldest of natural healing agents....It is only within the last twenty years,

however, that the physiological and therapeutic effects of light derived from natural and artificial sources have been made the subject of careful scientific study. Within this period numerous investigators have devoted themselves to the study of this subject, and the extended researches [sic] that have been made have resulted in the development of a new class of therapeutic methods, principles and measures which constitute the science of phototherapy. Quoted from: <https://link.springer.com/article/10.1057/s42738-022-00092-7> This book describes in detail Kellogg's philosophy and practice of curing ailments with the use of light. Profusely illustrated.

platinum sol tanning and wellness: *Emerging States at Crossroads* Keiichi Tsunekawa, Yasuyuki Todo, 2018-11-30 This book is open access under a CC BY-NC-ND license. This volume analyzes the economic, social, and political challenges that emerging states confront today. Notwithstanding the growing importance of the 'emerging states' in global affairs and governance, many problems requiring immediate solutions have emerged at home largely as a consequence of the rapid economic development and associated sociopolitical changes. The middle-income trap is a major economic challenge faced by emerging states. This volume regards interest coordination for technological upgrading as crucial to avoid the trap and examines how various emerging states are grappling with this challenge by fostering public-private cooperation, voluntary associations of market players, and/or social networks. Social disparity is another serious problem. It is deeply rooted in history in the emerging states such as South Africa and many Latin American countries. However, income distribution is recently deteriorating even in East Asia that was once praised for its

high economic growth with equity. Increasing pressure for political opening is another challenge for emerging states. This volume argues that the economic, social, and political problems are interwoven in the sense that the emerging states need to build political consensus in order to tackle the economic and social difficulties. Democratic institutions have not always been successful in this respect.
