potomac shores mental health and wellness: Weary Warriors Pamela Moss, Michael J. Prince, 2014-06-01 As seen in military documents, medical journals, novels, films, television shows, and memoirs, soldiers' invisible wounds are not innate cracks in individual psyches that break under the stress of war. Instead, the generation of weary warriors is caught up in wider social and political

networks and institutions—families, activist groups, government bureaucracies, welfare state programs—mediated through a military hierarchy, psychiatry rooted in mind-body sciences, and various cultural constructs of masculinity. This book offers a history of military psychiatry from the American Civil War to the latest Afghanistan conflict. The authors trace the effects of power and knowledge in relation to the emotional and psychological trauma that shapes soldiers' bodies, minds, and souls, developing an extensive account of the emergence, diagnosis, and treatment of soldiers' invisible wounds.

potomac shores mental health and wellness: Next Medicine Walter Bortz, MD, 2011-01-03 Every year, the average American spends about \$7,300 on medical expenses. The typical Canadian pays \$2,700, the Briton only \$2,000. And yet, according to the World Health Organization, our healthcare system, in terms of total quality, ranks thirty-eighth in the world, right between Costa Rica and Slovenia. Not only do 40 million Americans lack health insurance, but more than 200,000 die each year because of medical mistakes. Our average life expectancy is lower than Cuba's. In *Next Medicine*, Dr. Walter Bortz zeroes in on why the American medicine is spiraling toward disaster. A physician with fifty years of experience and a leading authority on aging, Bortz argues that the financial interests of biotech and drug companies have distorted the healthcare system. Thanks to them, medicine today is economically motivated to treat disease rather than to prevent it. Heart disease, for example, is widely treated with drug interventions and invasive surgery--both of which are extravagantly profitable for pharmaceutical giants and hospitals. Daily exercise and a healthy diet, on the other hand, can prevent heart disease, and can be obtained by patients essentially for free--but there's no money in that. The medical-industrial complex has a vested interest in keeping us sick, and until that changes medicine will fail to effectively address the leading cause of disability and mortality today: chronic diseases like diabetes that are largely preventable. Bortz proposes a medical system that emphasizes personal responsibility and provides incentives for healthy lifestyle choices, along with new training for medical professionals. Through a lively narrative full of personal anecdotes and jarring statistics, Bortz makes a powerful case for a radically new medical system--one that is based on rigorous science and loosens the strangle hold of corporate interests on American health.

potomac shores mental health and wellness: Salt Sugar Fat Michael Moss, 2013-02-26 From a Pulitzer Prize-winning investigative reporter at The New York Times comes the troubling story of the rise of the processed food industry -- and how it used salt, sugar, and fat to addict us. *Salt Sugar Fat* is a journey into the highly secretive world of the processed food giants, and the story of how they have deployed these three essential ingredients, over the past five decades, to dominate the North American diet. This is an eye-opening book that demonstrates how the makers of these foods have chosen, time and again, to double down on their efforts to increase consumption and profits, gambling that consumers and regulators would never figure them out. With meticulous original reporting, access to confidential files and memos, and numerous sources from deep inside the industry, it shows how these companies have pushed ahead, despite their own misgivings (never aired publicly). *Salt Sugar Fat* is the story of how we got here, and it will hold the food giants accountable for the social costs that keep climbing even as some of the industry's own say, Enough already.

potomac shores mental health and wellness: Dreams of El Dorado H. W. Brands, 2019-10-22 Epic in its scale, fearless in its scope (Hampton Sides), this masterfully told account of the American West from a two-time Pulitzer Prize finalist sets a new standard as it sweeps from the California Gold Rush and beyond. In *Dreams of El Dorado*, H. W. Brands tells the thrilling,

panoramic story of the settling of the American West. He takes us from John Jacob Astor's fur trading outpost in Oregon to the Texas Revolution, from the California gold rush to the Oklahoma land rush. He shows how the migrants' dreams drove them to feats of courage and perseverance that put their stay-at-home cousins to shame-and how those same dreams also drove them to outrageous acts of violence against indigenous peoples and one another. The West was where riches would reward the miner's persistence, the cattleman's courage, the railroad man's enterprise; but El Dorado was at least as elusive in the West as it ever was in the East. Balanced, authoritative, and masterfully told, *Dreams of El Dorado* sets a new standard for histories of the American West.

potomac shores mental health and wellness: *The Presidency of James K. Polk* Paul H. Bergeron, 1987 James K. Polk was one of the strongest and most active presidents ever to occupy the office. In the nineteenth century only Jefferson, Jackson, and Lincoln matched his overall leadership and domination of national government. Bergeron's crisp, insightful narrative shows how and why Polk achieved such stature and yet failed to attract the kind of popular support or retrospective recognition granted other presidential luminaries. A native of North Carolina, Polk prepared for the presidency by honing his leadership skills as a seven-term congressman, speaker of the house, and governor of Tennessee. Bergeron's summary and analysis of those years shed light on the foundations of the presidency that followed. He provides fresh new perspectives on Polk's relationship with his cabinet, his skirmishes with Congress over domestic economic legislation, and the curse of presidential patronage. But perhaps the most fascinating portions of this study are devoted to Polk's role as the western expansionist. By the end of his term, the United States had acquired enormous territories in the Southwest and far West. Bergeron demonstrates that Polk adroitly used both war and diplomacy to acquire and protect these lands. When the annexation of Texas led to the outbreak of war with Mexico, Polk was forced to become commander-in-chief of the American forces. In contrast, the potentially explosive dispute with Great Britain over Oregon's borders was settled through purely diplomatic means. Norman A. Graebner, in *America's Top Ten Presidents*, declares, Polk's achievements in diplomacy were among the most remarkable in American history. Drawing upon a careful review of the extensive literature on our eleventh president, as well as Polk's personal diary, Bergeron has written a significant and balanced reassessment of the Polk presidency. In the process, he has also created a revealing portrait of a complex man who led the nation with imperial determination tempered with compassion, generosity, and even humor.

potomac shores mental health and wellness: Muslim Societies in Postnormal Times Ziauddin Sardar, Jordi Serra, Scott Jordan, 2019-12-01 Where will Muslim societies be tomorrow? The world is increasingly and constantly changing, making it hard to keep up. This makes the state much more dire and troublesome for those already marginalised – particularly Muslim societies. Normal is no longer capable of upholding the promise of tomorrow's certainty. These are postnormal times. In this storm of ignorance and uncertainty, Muslim societies stand to lose the most. But this is not destiny. In the cultivation of a new type of literacy – futures literacy – there resides a hope. Muslim Societies

in Postnormal Times offers an alternative where we can 'rescue' and decolonise our futures. Sardar, Serra, and Jordan take an open and plural approach to the future revealing the true potentials that lie before us. Through detailed analysis of contemporary trends, the road to destruction is revealed. Through identifying and exploring emerging issues, agency through options can allow for positive change. And in the extrapolation of these ideas into scenarios, the authors pave the way for us to navigate our own preferred futures. Their study challenges the reader to think about the future in a new way, redefining the monolithic future as three tomorrows (Extended Present, Familiar Futures, and Unthought Futures), along the way ever watchful for Black Swans, Black Elephants, and the illustrious Black Jellyfish that could disrupt the path ahead. The authors pull no punches in critically evaluating the possibilities and nightmares that could potentially befall Muslim societies. Through a display of creativity and imagination, this book looks beyond the conventional to illuminate impacts in the context of the complex, interconnected world we find ourselves in. This informative and enlightening text will push readers to see beyond popular, yet native notions of present and future. In the exposition of the reader's ignorance and uncertainty, they will begin to look for the unthought and take agency in recolonising and navigating their preferred tomorrow.

potomac shores mental health and wellness: The Postnormal Times Reader Ziauddin Sardar, 2019-01-01 IIIT Books-In-Brief Series is a valuable collection of the Institute's key publications written in condensed form to give readers a core understanding of the main contents of the original. Postnormal times are best defined as 'an in-between period where old orthodoxies are dying, new ones have yet to be born, and very few things seem to make sense'. or, as Ezio Mauro puts it: 'we are hanging between the "no longer" and the "not yet" and thus we are necessary unstable -nothing around us is fixed, not even our direction of travel.' The postnormal times theory attempts to make sense of a rapidly changing world, where uncertainty is the dominant theme and ignorance has become a valuable community. The Postnormal Times Reader is a pioneering anthology of writings on the contradictory, complex and chaotic nature of our era. It covers the origins, theory and methods of postnormal times; and examines a host of issues, ranging from climate change, governance, Middle East to religion and science, from the perspective of postnormal times. By mapping some of the key local and global issues of our transitional age, the Reader suggests a way of navigating our turbulent futures.

potomac shores mental health and wellness: Hooked Michael Moss, 2021-03-02 NEW YORK TIMES BESTSELLER • From the author of Salt Sugar Fat comes a "gripping" (The Wall Street Journal) exposé of how the processed food industry exploits our evolutionary instincts, the emotions we associate with food, and legal loopholes in their pursuit of profit over public health. "The processed food industry has managed to avoid being lumped in with Big Tobacco—which is why Michael Moss's new book is so important."—Charles Duhigg, author of The Power of Habit Everyone knows how hard it can be to maintain a healthy diet. But what if some of the decisions we make about what to eat are beyond our control? Is it possible that food is addictive, like drugs or alcohol? And to what extent does the food industry know, or care, about these vulnerabilities? In Hooked, Pulitzer Prize-winning investigative reporter Michael Moss sets out to answer these questions—and to find the true peril in our food. Moss uses the latest research on addiction to uncover what the scientific and medical communities—as well as food manufacturers—already know: that food, in

some cases, is even more addictive than alcohol, cigarettes, and drugs. Our bodies are hardwired for sweets, so food giants have developed fifty-six types of sugar to add to their products, creating in us the expectation that everything should be cloying; we've evolved to prefer fast, convenient meals, hence our modern-day preference for ready-to-eat foods. Moss goes on to show how the processed food industry—including major companies like Nestlé, Mars, and Kellogg's—has tried not only to evade this troubling discovery about the addictiveness of food but to actually exploit it. For instance, in response to recent dieting trends, food manufacturers have simply turned junk food into junk diets, filling grocery stores with "diet" foods that are hardly distinguishable from the products that got us into trouble in the first place. As obesity rates continue to climb, manufacturers are now claiming to add ingredients that can effortlessly cure our compulsive eating habits. A gripping account of the legal battles, insidious marketing campaigns, and cutting-edge food science that have brought us to our current public health crisis, *Hooked* lays out all that the food industry is doing to exploit and deepen our addictions, and shows us why what we eat has never mattered more.

potomac shores mental health and wellness: The Civil War Diary of Gideon Welles, Lincoln's Secretary of the Navy Gideon Welles, 2014-08-15 Gideon Welles's 1861 appointment as secretary of the navy placed him at the hub of Union planning for the Civil War and in the midst of the powerful personalities vying for influence in Abraham Lincoln's cabinet. Although Welles initially knew little of naval matters, he rebuilt a service depleted by Confederate defections, planned actions that gave the Union badly needed victories in the war's early days, and oversaw a blockade that weakened the South's economy. Perhaps the hardest-working member of the cabinet, Welles still found time to keep a detailed diary that has become one of the key documents for understanding the inner workings of the Lincoln administration. In this new edition, William E. and Erica L. Gienapp have restored Welles's original observations, gleaned from the manuscript diaries at the Library of Congress and freed from his many later revisions, so that the reader can experience what he wrote in the moment. With his vitriolic pen, Welles captures the bitter disputes over strategy and war aims, lacerates colleagues from Secretary of State William H. Seward to General-in-Chief Henry Halleck, and condemns the actions of the self-serving southern elite he sees as responsible for the war. He just as easily waxes eloquent about the Navy's wartime achievements, extols the virtues of Lincoln, and drops in a tidbit of Washington gossip. Carefully edited and extensively annotated, this edition contains a wealth of supplementary material. The appendixes include short biographies of the members of Lincoln's cabinet, the retrospective Welles wrote after leaving office covering the period missing from the diary proper, and important letters regarding naval matters and international law.

Wilson imparts the wisdom of his storied career to the next generation. Edward O. Wilson has distilled sixty years of teaching into a book for students, young and old. Reflecting on his coming-of-age in the South as a Boy Scout and a lover of ants and butterflies, Wilson threads these twenty-one letters, each richly illustrated, with autobiographical anecdotes that illuminate his career—both his successes and his failures—and his motivations for becoming a biologist. At a time in human history when our survival is more than ever linked to our understanding of science, Wilson insists that success in the sciences does not depend on mathematical skill, but rather a passion for finding a problem and solving it. From the collapse of stars to the exploration of rain forests and the oceans' depths, Wilson instills a love of the innate creativity of science and a respect for the human being's modest place in the planet's ecosystem in his readers.
