princeton wellness and fitness: The Gospel of Wellness Rina Raphael, 2022-09-20

"Next-level revelatory. —Sarah Knight, New York Times bestselling author of *The Life-Changing Magic of Not Giving a F*ck* "Excellent...Rina really knows her shit...I'm so thankful for this book." —Jameela Jamil, actress and host of *I Weigh* Journalist Rina Raphael looks at the explosion of the wellness industry: how it stems from legitimate complaints, how seductive marketing targets hopeful consumers—and why women are opening up their wallets like never before. Wellness promises women the one thing they desperately desire: control. Women are pursuing their health like never before. Whether it's juicing, biohacking, clutching crystals, or sipping collagen, today there is something for everyone, as the wellness industry has grown from modest roots into a \$4.4 trillion entity and a full-blown movement promising health and vitality in the most fashionable package. But why suddenly are we all feeling so unwell? The truth is that deep within the underbelly of self-care—hidden beneath layers of clever marketing—wellness beckons with a far stronger, more seductive message than health alone. It promises women the one thing they desperately desire: control. Vividly told and deeply reported, *The Gospel of Wellness* reveals how this obsession is a direct result of women feeling dismissed, mistreated, and overburdened. Women are told they can manage the chaos ruling their life by following a laid-out plan: eat right, exercise, meditate, then buy or do all this stuff. And while wellness may have sprung from good intentions, we are now relentlessly flooded with exploitative offerings, questionable ideas, and a mounting pressure to stay devoted to the divine doctrine of wellness. What happens when the cure becomes as bad as the disease? With a critical eye, humor, and empathy, wellness industry journalist Rina Raphael examines how women have been led down a kale-covered path promising nothing short of salvation. She knows: Raphael was once a disciple herself—trying everything from "clean eating" to electric shock workouts—until her own awakening to the troubling consequences. Balancing the good with the bad, *The Gospel of Wellness* is a clear-eyed exploration of what wellness can actually offer us, knocking down the false idols and commandments that have taken hold and ultimately showing how we might shape a better future for the movement—and for our well-being.

Bloomberg's Jason Kelly, author of *The New Tycoons*, profiles the participants, entrepreneurs, and investors at the center of this movement, exploring this phenomenon in which a surge of people—led by the most affluent—are becoming increasingly obsessed with looking and feeling better. Through in-depth looks inside companies and events from New York Road Runners to Tough Mudder and Ironman, Kelly profiles the companies and people aiming to meet the demands of these consumers, and the traits and strategies that made them so successful. In a modern world filled with anxiety, pressure, and competition, people are spending more time and money than ever before to soothe their minds and tone their bodies, sometimes pushing themselves to the most extreme limits. Even as obesity rates hit an all-time high, the most financially successful among us are collectively spending billions each year on apparel, gear, and entry fees. *Sweat Equity* charts the rise of the movement, through the eyes of competitors and the companies that serve them. Through conversations with businesspeople, many driven by their own fitness obsessions, and first-hand accounts of the sports themselves, Kelly delves into how the movement is taking shape. Understand the social science, physics, and economics of our desire to pursue activities like endurance sports and yoga Get to know the endurance business's target demographics Learn how distance running—once a fringe hobby—became a multibillion dollar enterprise fueled by private equity Understand how different generations pursue fitness and how fast-growing companies sell to them The opportunity to run, swim, and crawl in the mud is resonating with more and more of us, as sports once considered extreme become mainstream. As Baby Boomers seek to stay fit and Millennials search for meaning in a hyperconnected world, the demand for the race bib is outstripping supply, even as the cost to participate escalates. *Sweat*

princeton wellness and fitness: *Digital Wellness, Health and Fitness Influencers* Stefan Lawrence, 2022-10-07 This book examines the phenomenon of 'digital guru media' (DGM), the self-styled online influencers, life coaches, experts and entrepreneurs who post on the themes of wellness, health and fitness. It opens up new perspectives on digital leisure and internet celebrity culture, and asks important questions about the social, cultural and psychological implications of our contemporary relationship with digital media. Drawing on cutting-edge social theory, the book explores a wide range of contexts in which DGM intersects with digital leisure, from the health-related learning of young people to the 'clean eating' movement, to the online lives of fitness professionals. It asks if digital and social media are problematic per se and explores the problems a turn to the Internet could be revealing about the lack of real-world or analogue support, as well as potential solutions, for our wellness, health and fitness needs and wants. Bringing together innovative, multi-disciplinary perspectives, this book is fascinating reading for anybody with an interest in leisure studies, media studies, cultural studies, sociology, or health and society.

princeton wellness and fitness: *Fit Nation* Natalia Mehlman Petrzela, 2022-12-27 How is it that Americans are more obsessed with exercise than ever, and yet also unhealthier? *Fit Nation* explains how we got here and imagines how we might create a more inclusive, stronger future. If a shared American creed still exists, it's a belief that exercise is integral to a life well lived. A century ago, working out was the activity of a strange subculture, but today, it's almost impossible to avoid exhortations to exercise: Walk 5K to cure cancer! Awaken your inner sex kitten at pole-dancing class! Sweat like (or even with) a celebrity in spin class! Exercise is everywhere. Yet the United States is hardly a "fit nation." Only 20 percent of Americans work out consistently, over half of gym members don't even use the facilities they pay for, and fewer than 30 percent of high school students get an hour of exercise a day. So how did fitness become both inescapable and inaccessible? Spanning more than a century of American history, *Fit Nation* answers these questions and more through original interviews, archival research, and a rich cultural narrative. As a leading political and intellectual historian and a certified fitness instructor, Natalia Mehlman Petrzela is uniquely qualified to confront the complex and far-reaching implications of how our contemporary exercise culture took shape. She explores the work of working out not just as consumers have experienced it, but as it was created by performers, physical educators, trainers, instructors, and many others. For Petrzela, fitness is a social justice issue. She argues that the fight for a more

equitable exercise culture will be won only by revolutionizing fitness culture at its core, making it truly inclusive for all bodies in a way it has never been. Examining venues from the stage of the World's Fair and Muscle Beach to fat farms, feminist health clinics, radical and evangelical college campuses, yoga retreats, gleaming health clubs, school gymnasiums, and many more, *Fit Nation* is a revealing history that shows fitness to be not just a matter of physical health but of what it means to be an American.

princeton wellness and fitness: *Paradigm City* Janet Ng, 2008-12-18 Hong Kong is often cast in the role of the paradigmatic global city, epitomizing postmodernism and globalization, and representing a vision of a cosmopolitan global and capitalist future. In *Paradigm City*, Janet Ng takes us past the obsession with 1997—the year of Hong Kong's return to China—to focus on the complex uses and meanings of urban space in Hong Kong in the period following that transfer. She demonstrates how the design and ordering of the city's space and the practices it supports inculcates a particular civic aesthetic among Hong Kong's population that corresponds to capitalist as well as nationalist ideologies. Ng's insightful connections between contemporary film, literature, music, and other media and the actual spaces of the city—such as parks, shopping malls, and domestic spaces—provide a rich and nuanced picture of Hong Kong today.

princeton wellness and fitness: An Anthropology of Biomedicine Margaret M. Lock, Vinh-Kim Nguyen, 2018-01-09 In this fully revised and updated second edition of *An Anthropology of Biomedicine*, authors Lock and Nguyen introduce biomedicine from an anthropological perspective, exploring the entanglement of material bodies with history, environment, culture, and politics. Drawing on historical and ethnographic work, the book critiques the assumption made by the biological sciences of a universal human body that can be uniformly standardized. It focuses on the ways in which the application of biomedical technologies brings about radical changes to societies at large based on socioeconomic inequalities and ethical disputes, and develops and integrates the theory that the human body in health and illness is not an ontological given but a moveable, malleable entity. This second edition includes new chapters on: microbiology and the microbiome; global health; and, the self as a socio-technical system. In addition, all chapters have been comprehensively revised to take account of developments from within this fast-paced field, in the intervening years between publications. References and figures have also been updated throughout. This highly-regarded and award-winning textbook (Winner of the 2010 Prose Award for Archaeology and Anthropology) retains the character and features of the previous edition. Its coverage remains broad, including discussion of: biomedical technologies in practice; anthropologies of medicine; biology and human experiments; infertility and assisted reproduction; genomics, epigenomics, and uncertain futures; and molecularizing racial difference, ensuring it remains the essential text for students of anthropology, medical anthropology as well as public and global health.

princeton wellness and fitness: *Educating the Student Body* Committee on Physical Activity and Physical Education in the School Environment, Food and Nutrition Board, Institute of Medicine, 2013-11-13 Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. *Educating the Student Body* makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of

interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.
