rancho wellness rancho cucamonga: Neuroplasticity, Performativity, and Clergy Wellness William D. Roozeboom, 2016-12-24 This book invites readers, particularly clergy members, to rethink their understandings of the human person in light of recent developments in neuroscience. In addition to bringing together religion and neuroscience, it engages narrative theory, exercise physiology, and constructions of wellness to raise crucial questions about human identity and relationality and argue for a model of care that connects self-care and care for/with others. Furthermore, it claims that human beings are whole, intra/inter-relational, dynamic, plastic, and performative agents who have the capacity to story themselves neurophysiologically (in both "top-down" and "bottom-up" ways) through their regular practices of wellness.

rancho wellness rancho cucamonga: The Cytokine Network Frances R. Balkwill, 2000 Cytokines are soluble mediators of intercellular communication. They contribute to a chemical signalling language that regulates development, tissue repair, haemopoiesis, inflammation and the immune response. Potent cytokine polypeptides have pleiotropic activities and functional redundancy. They act in a complex network where one cytokine can influence the production of, and response to, many other cytokines. In the past five years, this bewildering array of more than 100 effector molecules and associated cell surface receptors has been simplified by study of cytokine and cytokinereceptor structure; elucidation of convergent intracellular signalling pathways; and

molecular genetics, and targeted gene disruption to 'knock-out' production of individual cytokines in mice. It is also now clear that the pathophysiology of infectious, autoimmune and malignant disease can be partially explained by the induction of cytokines and the subsequent cellular response. Viral homologues exist for many cytokines and receptors and genetic variations in cytokine production may influence response to pathogenic stimuli. Cytokine and cytokine antagonists have shown therapeutic potential in a number of chronic and acute diseases. The Cytokine Network: Frontiers in Molecular Biology is not a survey of individual cytokines, but guides the reader through the latest research on the cytokine network as a whole covering genomics, signalling pathways, control of the immune response, and therapeutics.

rancho wellness rancho cucamonga: Flamin' Hot Richard Montanez, 2021-06-15 Soon to be a Hulu feature film directed by Eva Longoria - scheduled release for Summer 2023 Read the story everyone is talking about: how a janitor struggling to put food on the table invented Flamin' Hot Cheetos in a secret test kitchen, breaking barriers and becoming the first Latino frontline worker promoted to executive at Frito-Lay. Richard Montañez is a man who made a science out of walking through closed doors, and his success story is an empowerment manual for anyone stuck in a dead-end job or facing a system stacked against them. Having taken a job mopping floors at Frito-Lay's California factory to support his family, Montañez took his future into his own hands and created the world's hottest snack food: Flamin' Hot Cheetos. This bold move not only disrupted the food industry with some much-needed spice, but also shook up a corporate culture in which everyone stayed in their lane. When a top food scientist at Frito-Lay sent out a memo telling sales and marketing to kill the new product before it made it to the store shelves—jealous that someone with no formal education beyond the sixth grade could do his job—Montañez was forced to go rogue once again to save his idea. Through creative thinking, community building, and a few powerful mindset shifts, he outsmarted the naysayers who tried to get in his way. Flamin' Hot proves that you can break out of your career rut and that your present circumstances don't have to dictate your future.

rancho wellness rancho cucamonga: *Next Medicine* Walter Bortz, MD, 2011-01-03 Every year, the average American spends about \$7,300 on medical expenses. The typical Canadian pays \$2,700, the Briton only \$2,000. And yet, according to the World Health Organization, our healthcare system, in terms of total quality, ranks thirty-eighth in the world, right between Costa Rica and Slovenia. Not only do 40 million Americans lack health insurance, but more than 200,000 die each year because of medical mistakes. Our average life expectancy is lower than Cuba's. In *Next Medicine*, Dr. Walter Bortz zeroes in on why the American medicine is spiraling toward disaster. A physician with fifty years of experience and a leading authority on aging, Bortz argues that the financial interests of biotech and drug companies have distorted the healthcare system. Thanks to them, medicine today is economically motivated to treat disease rather than to prevent it. Heart disease, for example, is widely treated with drug interventions and invasive surgery--both of which are extravagantly profitable for pharmaceutical giants and hospitals. Daily exercise and a healthy diet, on the other hand, can prevent heart disease, and can be obtained by patients essentially for free--but there's no money in that. The medical-industrial complex has a vested interest in keeping us sick, and until that changes medicine will fail to effectively address the leading cause of disability and mortality today: chronic diseases like diabetes that are largely preventable. Bortz proposes a medical system that emphasizes personal responsibility and provides incentives for healthy lifestyle choices, along with new training for medical professionals. Through a lively narrative full of personal anecdotes and jarring statistics, Bortz makes a powerful case for a radically new medical system--one that is based on rigorous science and loosens the strangle hold of corporate interests on American health.

Anyone will tell you that! But for all the rosy sentiments surrounding friendship, most people don't talk much about what it really takes to stay close for the long haul. Now two friends, Aminatou Sow and Ann Friedman, tell the story of their equally messy and life-affirming Big Friendship in this honest and hilarious book that chronicles their first decade in one another's lives. As the hosts of the hit podcast Call Your Girlfriend, they've become known for frank and intimate conversations. In this book, they bring that energy to their own friendship—its joys and its pitfalls. Aminatou and Ann define Big Friendship as a strong, significant bond that transcends life phases, geographical locations, and emotional shifts. And they should know: the two have had moments of charmed bliss and deep frustration, of profound connection and gut-wrenching alienation. They have weathered life-threatening health scares, getting fired from their dream jobs, and one unfortunate Thanksgiving dinner eaten in a car in a parking lot in Rancho Cucamonga. Through interviews with friends and experts, they have come to understand that their struggles are not unique. And that the most important part of a Big Friendship is making the decision to invest in one another again and again. An inspiring and entertaining testament to the power of society's most underappreciated relationship, Big Friendship will invite you to think about how your own bonds are formed, challenged, and preserved. It is a call to value your friendships in all of their complexity. Actively choose them. And, sometimes, fight for them.
