rejuve cosmetic and wellness: *Cities as Sustainable Ecosystems* Peter Newman, Isabella Jennings, 2012-09-26 Modern city dwellers are largely detached from the environmental effects of their daily lives. The sources of the water they drink, the food they eat, and the energy they consume are all but invisible, often coming from other continents, and their waste ends up in places beyond their city boundaries. *Cities as Sustainable Ecosystems* shows how cities and their residents can begin to reintegrate into their bioregional environment, and how cities themselves can be planned with nature's organizing principles in mind. Taking cues from living systems for sustainability strategies, Newman and Jennings reassess urban design by exploring flows of energy, materials, and information, along with the interactions between human and non-human parts of the system. Drawing on examples from all corners of the world, the authors explore natural patterns and processes that cities can emulate in order to move toward sustainability. Some cities have adopted simple strategies such as harvesting rainwater, greening roofs, and producing renewable energy. Others have created biodiversity parks for endangered species, community gardens that support a connection to their foodshed, and pedestrian-friendly spaces that encourage walking and cycling. A

powerful model for urban redevelopment, *Cities as Sustainable Ecosystems* describes aspects of urban ecosystems from the visioning process to achieving economic security to fostering a sense of place.

rejuve cosmetic and wellness: *Dermal Fillers* D.J. Goldberg, 2017-11-21 The aging process affects every aspect of the body, with the face being one of the first places to show signs. The search for the perfect injectable filler has taken an interesting path with the majority of innovations having been introduced in the last 30 years. The patient-driven demand for safe and effective minimally invasive aesthetic procedures has led to the development of an expanding and competitive market for dermal fillers. The demand for soft tissue augmentation has grown rapidly since its start in 1981 with collagen fillers. Fillers using hyaluronic acid, calcium hydroxyapatite, poly-L-lactic acid, and polymethylmethacrylate provide a wide range of options so that the best cosmetic outcome can be attained. The ability to correct facial rhytides and folds, to augment lips and cheeks, to correct acne scars, and now even to replenish volume loss in the dorsum of the hands is something that many practitioners thought would never be possible. This publication reviews the history of fillers, injection techniques, complications and safety as well as the novel use of fillers and fillers of the future.
