restore hyper wellness paramus: *Enviromedics* Jay Lemery, Paul Auerbach, 2017-10-20 Many of us have concerns about the effects of climate change on Earth, but we often overlook the essential issue of human health. This book addresses that oversight and enlightens readers about the most important aspect of one of the greatest challenges of our time. The global environment is under massive stress from centuries of human industrialization. The projections regarding climate change for the next century and beyond are grim. The impact this will have on human health is tremendous, and we are only just now discovering what the long-term outcomes may be. By weighing in from a physician's perspective, Jay Lemery and Paul Auerbach clarify the science, dispel the myths, and help readers understand the threats of climate change to human health. No better argument exists for persuading people to care about climate change than a close look at its impacts on our physical and emotional well-being. The need has never been greater for a grounded, informative, and accessible discussion about this topic. In this groundbreaking book, the authors not only sound the alarm but address the health issues likely to arise in the coming years.

restore hyper wellness paramus: *Environmental Melancholia* Renee Lertzman, 2015-06-12 In this groundbreaking book, Renee Lertzman applies psychoanalytic theory and psychosocial research to the issue of public engagement and public apathy in response to chronic ecological threats. By highlighting unconscious and affective dimensions of contemporary ecological issues, Lertzman deconstructs the idea that there is a gap between what people care about and what is actually carried out in policy and personal practice. In doing so, she presents an innovative way to think about and design engagement practices and policy interventions. Based on key qualitative

fieldwork and in-depth interviews conducted in Green Bay, Wisconsin, each chapter provides a psychosocial, psychoanalytic perspective on subjectivity, affect and identity, and considers what this means for understanding behaviour in relation to environmental crises and climate change. The book argues for a theory of environmental melancholia that accounts for the ways in which people experience profound loss and disruption caused by environmental issues, and yet may have trouble expressing or making sense of such experiences. *Environmental Melancholia* offers a fresh perspective to the field of environmental psychology that until now has been largely dominated by research in cognitive, behavioural and social psychology. It will appeal to academics, researchers and postgraduate students in the fields of psychoanalysis, psychosocial studies and sustainability, as well as policy makers and educators internationally.

restore hyper wellness paramus: Bridging the Achievement Gap John E. Chubb, Tom Loveless, 2004-05-13 The achievement gap between white students and African American and Hispanic students has been debated by scholars and lamented by policymakers since it was first documented in 1966. The average black or Hispanic secondary school student currently achieves at about the same level as the average white student in the lowest quartile of white achievement. Black and Hispanic students are much less likely than white students to graduate from high school, acquire a college or advanced degree, or earn a middle-class living. They are also much more likely than whites to suffer social problems that often accompany low income. While educators have gained an understanding of the causes and effects of the education achievement gap, they have been less successful in finding ways to eliminate it—until now. This book provides, for the first time in one place, evidence that the achievement gap can be bridged. A variety of schools and school reforms are boosting the achievement of black and Hispanic students to levels nearing those of whites. *Bridging the Achievement Gap* brings together the findings of renowned education scholars who show how various states, school districts, and individual schools have lifted the achievement levels of poor and minority students. The most promising strategies include focusing on core academic skills, reducing class size, enrolling students in more challenging courses, administering annual achievement assessment tests, creating schools with a culture of competition and success, and offering vouchers in big-city school districts. While implementing new educational programs on a large scale is fraught with difficulties, these successful reform efforts offer what could be the start of widespread effective solutions for bridging the achievement gap.

restore hyper wellness paramus: College Andrew Delbanco, 2023-04-18 The strengths and failures of the American college, and why liberal education still matters As the commercialization of American higher education accelerates, more and more students are coming to college with the narrow aim of obtaining a preprofessional credential. The traditional four-year college experience—an exploratory time for students to discover their passions and test ideas and values with the help of teachers and peers—is in danger of becoming a thing of the past. In *College*, prominent cultural critic Andrew Delbanco offers a trenchant defense of such an education, and

warns that it is becoming a privilege reserved for the relatively rich. In describing what a true college education should be, he demonstrates why making it available to as many young people as possible remains central to America's democratic promise. In a brisk and vivid historical narrative, Delbanco explains how the idea of college arose in the colonial period from the Puritan idea of the gathered church, how it struggled to survive in the nineteenth century in the shadow of the new research universities, and how, in the twentieth century, it slowly opened its doors to women, minorities, and students from low-income families. He describes the unique strengths of America's colleges in our era of globalization and, while recognizing the growing centrality of science, technology, and vocational subjects in the curriculum, he mounts a vigorous defense of a broadly humanistic education for all. Acknowledging the serious financial, intellectual, and ethical challenges that all colleges face today, Delbanco considers what is at stake in the urgent effort to protect these venerable institutions for future generations.

restore hyper wellness paramus: *The Bardo of Waking Life* Richard Grossinger, 2011-05-31 An avant garde set of improvisational essays, Richard Grossinger's *The Bardo of Waking Life* is a meditation on the Tibetan Buddhist bardo realm which, in popular culture, is viewed as the bridge between lives, the state people enter after death and before rebirth. This book examines waking life and its history and language as if it were a bardo state rather than ultimate reality, and thus seeks a context for life (and dreams), even as it addresses more mundane issues including genetic theory, the war in Iraq and George W. Bush's presidency, North Korea, advertising, global warming, Prison Industrial Culture, childhood trauma, even country western music. Written with playfulness and precision, Bardo takes a new, probing approach to all the important questions of creation, destruction, and existence. In these intellectual field notes, Grossinger proves thematically fearless as he crosses quantum mechanics with totemic hexes and draws transcendental insight from the ephemeral space-time we call daily life. If, as Tibetan cosmology holds true, all conditional realms are bardos, then the state we all share is nothing less than the bardo of waking life.

Hartman, Ann Meyerson, 1986-01 The overwhelming majority of writing done in the field of housing today is based on the erroneous assumption that either the nation's housing problems are not overly serious or long-lasting or that adjustments in market mechanisms and slightly modified government housing policies can correct the existing problems. Critical Perspectives on Housing, a collection of thirty-three articles, sixteen of which have been specifically written for the volume or are being published for the first time, attempts to dispel those illusions and set forth concrete proposals for change. Written by leading scholars and activists in the country today, the articles examine such diverse elements of the housing picture as the construction industry, gentrification, the homeless, abandonment, the market's ability to serve minorities and women, the income tax system, rural housing problems, suburbanization, and the actions of the Reagan Administration. The articles are divided into three sections: The Workings of the Private Housing Market; The Role of the State; and Strategies for Change. Critical Perspectives on Housing moves beyond the analytic perspective, however, by advancing a range of alternative approaches to help solve the housing crisis. These approaches are augmented by a survey of current and historical approaches taken by other governments and societies to address the crucial problems of their people's housing needs. restore hyper wellness paramus: What's Left Out Jay Baruch, 2015 2015 INDIEFAB Book of the Year Bronze Award for Short Fiction Short stories about the complex maze of health care Conventional medical narratives often fail to capture the incoherent, surreal, and logic-twisting reality of the contemporary healthcare experience, where mystery, absurdity, and even cruelty are disguised as logic, reason, and compassion. In this new collection of stories by physician and writer Jay Baruch, characters struggle in their quest for meaning and a more hopeful tomorrow in a strange landscape where motivations are complex and convoluted and what is considered good and just operates as a perpetually shifting proposition. Readers are invited to eavesdrop on the conversations and thoughts of those negotiating the healthcare landscape while attempting to maintain their sanity. Each glimpse into the minds of patients, doctors, and family members reveals

the stark reality that reason and compassion are not always the lifeblood of a system devoted to healing. From a weary night shift doctor dealing with a chronic patient to a physician figuring out how to tell the next of kin about a relative's death, each of Baruch's characters exposes the multitude of emotions lurking behind the strained and sickly faces in the hospital waiting room. With imagination and an eye for detail, Baruch takes readers on an unsparing ride through the hidden, ignored, or misunderstood challenges facing healers and the ill. It is a world where communities shoulder unrelenting burdens, optimism is held with caution, and people ration their dreams. Baruch's vivid storytelling guides his readers through the incoherent and emotionally fraught reality he has faced during his twenty years as an emergency physician. The stories in *What's Left Out* ask readers to take risks, to make leaps into unfamiliar territory, and, like the larger healthcare enterprise, to develop comfort and trust in the untraditional and unexpected.
