restore hyper wellness raleigh: *Fiber Fueled* Will Bulsiewicz, MD, 2020-05-12 The instant New York Times, USA Today, and Publisher's Weekly bestseller A bold new plant-based plan that challenges popular keto and paleo diets, from an award-winning gastroenterologist. The benefits of restrictive diets like paleo and keto have been touted for more than a decade, but as renowned gastroenterologist Dr. Will Bulsiewicz, or Dr. B, illuminates in this groundbreaking book, the explosion of studies on the microbiome makes it abundantly clear that elimination diets are in fact hazardous to our health. What studies clearly now show--and what Dr. B preaches with his patients--is that gut health is the key to boosting our metabolism, balancing our hormones, and taming the inflammation that causes a host of diseases. And the scientifically proven way to fuel our guts is with dietary fiber from an abundant variety of colorful plants. Forget about the fiber your grandmother used to take--the cutting-edge science on fiber is incredibly exciting. As Dr. B explains, fiber energizes our gut microbes to create powerhouse postbiotics called short-chain fatty acids (SCFAs) that are essential to our health. SCFAs are scientifically proven to promote weight loss, repair leaky gut, strengthen the microbiome, optimize the immune system, reduce food sensitivities, lower cholesterol, reverse type 2 diabetes, improve brain function, and even prevent cancer. Restrictive fad diets starve the gut of the critical fiber we need, weaken the microbes, and make our system vulnerable. As a former junk-food junkie, Dr. B knows firsthand the power of fiber to dramatically transform our health. The good news is that our guts can be trained. Fiber-rich, real foods--with fruits, vegetables, whole grains, seeds, nuts, and legumes--start working quickly and maintain your long-term health, promote weight loss, and allow you to thrive and feel great from the inside out. With a 28-day jumpstart program with menus and more than 65 recipes, along with essential advice on food sensitivities, *Fiber Fueled* offers the blueprint to start turbocharging your gut for lifelong health today.

Is it possible to do this in a way that's culturally sensitive, multidisciplinary, and grounded in research? *Rhythms of Recovery* examines and answers these questions and provides clinicians with effective, time-tested tools for alleviating the destabilizing effects of traumatic events. It also explores integrative medicine, East/West medicine, herbal medicine, psychedelic medicine, complex trauma, yoga, and somatic and feminist therapies. The worry and uncertainty associated with absent family members exacerbates the challenges of personal, social, and economic resources on the home front. U.S. military operations in Iraq and Afghanistan have sent a million service personnel from the U.S. alone into conflict areas leaving millions of spouses, children and others in stressful circumstances. This is not a new situation for military families, but it has taken a toll of magnified proportions in recent times. In addition, medical advances have prolonged the life of those who might have died of injuries. As a result, more families are caring for those who have experienced amputation, traumatic brain injury, and profound psychological wounds. The Department of Defence has launched unprecedented efforts to support service members and families before, during, and after deployment in all locations of the country as well as in remote locations. *Stress in U.S. Military Families* brings together an interdisciplinary group of experts from the military to the medical to examine the issues of this critical problem. Its goal is to review the factors that contribute to stress in military families and to point toward strategies and policies that can help. Covering the major topics of parenting, marital functioning, and the stress of medical care, and including a special chapter on single service members, it serves as a comprehensive guide for those who will intervene in these problems and for those undertaking their research.

restore hyper wellness raleigh: American Huckster Mary Papenfuss, Teri Thompson, 2016-04-26 The first inside account of the international soccer scandal that rocked the world and the American at its center—the incredible story of how a stay-at-home New York soccer dad illegally made millions off the world's most powerful and corrupt sports organization and became an unlikely FBI whistleblower. He was the middle-class Jewish kid from Queens who rose from local youth soccer leagues to the heights of FIFA, becoming a larger-than-life, jet-setting buccaneer—and the most notorious FBI informant in sports history. For years, Chuck Blazer skimmed over \$20 million from FIFA, stashing his money in offshore accounts and real estate holdings that included a luxury apartment in Trump Tower, a South Beach condo, and a hideaway in the Bahamas. Instantly recognizable with his unruly mass of salt-and-pepper hair and matching beard—and a rotating crop of arm candy—Blazer was one of the most flamboyant figures in the glitzy social and political circles of international soccer. Over the course of thirty years, Blazer leveraged his friendships with the likes of Vladimir Putin, Hillary Clinton and Nelson Mandela, to increase his influence with the mandarins of global soccer—most notably Sepp Blatter, FIFA's long-time godfather. Once Blatter tapped Blazer to be the first American in almost fifty years to sit on FIFA's executive committee, the erstwhile accountant steadily accumulated money and power—until 2013 when the FBI and IRS nabbed Blazer and charged him with fraud, money laundering, and tax evasion. In exchange for immunity, Blazer agreed to let the Feds install a microphone in his keychain to entrap his larcenous band of brothers—leading to the shocking arrest and indictment of eighteen FIFA officials for racketeering and bribery. In this taut and suspenseful tale of white-collar crime and betrayal at the highest levels of international business, investigative reporters Mary Papenfuss and Teri Thompson draw on sources in U.S. law enforcement as well as in Blazer's inner circle to tell the surreal tale of this astonishing character and the scandal that rocked the world.

restore hyper wellness raleigh: Living Well with Chronic Illness Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Living Well with Chronic Disease: Public Health Action to Reduce Disability and Improve Functioning and Quality of Life, 2011-06-30 In the United States, chronic diseases currently account for 70 percent of all deaths, and close to 48 million Americans report a disability related to a chronic condition. Today, about one in four Americans have multiple diseases and the prevalence and burden of chronic disease in the elderly and racial/ethnic minorities are notably disproportionate. Chronic disease has now emerged as a major public health problem and it threatens not only population health, but our social and economic welfare. *Living Well with Chronic Disease* identifies the population-based public health actions that can help reduce disability and improve functioning and quality of life among individuals who are at risk of developing a chronic disease and those with one or more diseases. The book recommends that all major federally funded programmatic and research initiatives in health include an evaluation on health-related quality of life and functional status. Also, the book recommends increasing support

for implementation research on how to disseminate effective longterm lifestyle interventions in community-based settings that improve living well with chronic disease. *Living Well with Chronic Disease* uses three frameworks and considers diseases such as heart disease and stroke, diabetes, depression, and respiratory problems. The book's recommendations will inform policy makers concerned with health reform in public- and private-sectors and also managers of communitybased and public-health intervention programs, private and public research funders, and patients living with one or more chronic conditions.

restore hyper wellness raleigh: *The Clinical Management of Nicotine Dependence* James A. Cocores, 2011-10-21 The 1980s have seen a remarkable degree of public and professional acceptance of cigarette smoking as the most widespread and devastating form of drug dependence. More medical schools now give required courses about drug dependence. Prestigious journals publish reports of investigations on the subject of nicotine dependence, and more conferences and workshops are held each year on various aspects of nicotine dependence. All this is in sharp contrast to the earlier prevailing atmosphere of dis interest, ignorance, or professional disdain. These changes created an obvious place for a textbook oriented primarily toward the needs of clinicians working with patients who have nicotine dependence. Thus, in preparation of this book, most aspects of the management of nicotine dependence are incorporated, in order to address concerns of physicians in training and other health care professionals across the world. The final product, which I believe to be comprehensive and clinically relevant throughout, is a text that I hope will be of equal use to psychologists, social workers, nurses, counselors, and physicians in all specialties. An encyclopedic treatise was deliberately avoided because that approach can be cumbersome in size, readability, and cost, and for that reason, readers will find little mention of data involving animal research, nicotine-related politics, nicotine product advertising, medical consequences of smoking, psychotherapeutic techniques, and the extent of the problem.

Today, the U.S. food and agricultural enterprise faces formidable challenges that will test its long-term sustainability, competitiveness, and resilience. On its current path, future productivity in the U.S. agricultural system is likely to come with trade-offs. The success of agriculture is tied to natural systems, and these systems are showing signs of stress, even more so with the change in climate. More than a third of the food produced is unconsumed, an unacceptable loss of food and nutrients at a time of heightened global food demand. Increased food animal production to meet greater demand will generate more greenhouse gas emissions and excess animal waste. The U.S. food supply is generally secure, but is not immune to the costly and deadly shocks of continuing outbreaks of food-borne illness or to the constant threat of pests and pathogens to crops, livestock,

and poultry. U.S. farmers and producers are at the front lines and will need more tools to manage the pressures they face. Science Breakthroughs to Advance Food and Agricultural Research by 2030 identifies innovative, emerging scientific advances for making the U.S. food and agricultural system more efficient, resilient, and sustainable. This report explores the availability of relatively new scientific developments across all disciplines that could accelerate progress toward these goals. It identifies the most promising scientific breakthroughs that could have the greatest positive impact on food and agriculture, and that are possible to achieve in the next decade (by 2030).

restore hyper wellness raleigh: National Identity, Popular Culture and Everyday Life Tim Edensor, 2020-06-15 The Millennium Dome, Braveheart and Rolls Royce cars. How do cultural icons reproduce and transform a sense of national identity? How does national identity vary across time and space, how is it contested, and what has been the impact of globalization upon national identity and culture? This book examines how national identity is represented, performed, spatialized and materialized through popular culture and in everyday life. National identity is revealed to be inherent in the things we often take for granted - from landscapes and eating habits, to tourism, cinema and music. Our specific experience of car ownership and motoring can enhance a sense of belonging, whilst Hollywood blockbusters and national exhibitions provide contexts for the ongoing, and often contested, process of national identity formation. These and a wealth of other cultural forms and practices are explored, with examples drawn from Scotland, the UK as a whole, India and Mauritius. This book addresses the considerable neglect of popular cultures in recent studies of nationalism and contributes to debates on the relationship between 'high' and 'low' culture.

restore hyper wellness raleigh: The Toxicant Induction of Irritant Asthma, Rhinitis, and Related Conditions William J. Meggs, 2014-01-24 Untoward reactions to environmental chemicals, particularly when a subject reports difficulties with exposures to chemicals of diverse classes involving more than one organ system, have been poorly understood and an area of great controversy. Studies of airway inflammation induced by respiratory irritants have established neurogenic inflammation as the mechanism for irritant asthma and rhinitis. Remodeling of the airway after an acute irritant exposure can lead to a heightened sensitivity to irritants that persists. Recognition that rhinitis, while sometimes regarded as a trivial disease, is associated with

extra-airway manifestations such as fatigue and disturbances of sleep, mood, and cognition, further elucidates how chemical exposures can be serious for susceptible individuals. This book reviews current scientific understanding of irritant airway inflammation and related conditions, including cardiovascular effects of particulate exposures, airborne contact dermatitis and irritant dermatitis, and the brain as a target organ for both allergic and irritant reactions. It is essential reading for physicians and other healthcare workers caring for patients with environmental intolerances. Allergists, toxicologists, occupational and environmental physicians, and pulmonologists will find the materials particularly valuable. Patients and advocates for those with chemical intolerances will also find the book of interest.

restore hyper wellness raleigh: The Emerging Domain of Cooperating Objects Pedro José Marron, Stamatis Karnouskos, Daniel Minder, Aníbal Ollero, 2011-01-19 There are a number of different system concepts that have gained much relevance in the area of embedded systems over the past couple of years. First, there is the classic concept of embedded systems where the focus is on control systems for physical processes. Secondly, the notion of pervasive computing has evolved, where the vision foresees everyday objects having some form of computation capacity and, in most cases, sensing and communication facilities. Thirdly, the notion of wireless sensor networks has arisen, where small computing devices are able to sense their environment and cooperate in order to achieve a well-defined goal. These three types of quite diverse systems share a lot of commonalities on the one hand and, on the other hand, have some complementary aspects in common that make a combination of these systems into a coherent system vision promising. In particular, the important notions of control, heterogeneity, wireless communication, dynamic and ad-hoc nature and cost are prevalent to various degrees in each of these systems. A future system concept needs to combine the strong points of all three system concepts in at least these functional aspects. It has to provide support for the control of physical processes like today's embedded systems do, have as good support for device heterogeneity and spontaneity of usage as required by pervasive and ubiquitous computing approaches, and has to be as cost efficient and wirelessly agile as wireless sensor networks are. These new systems consist, therefore, of individual entities or objects that jointly

strive to reach a common goal, which will typically be a goal in sensing or control, and are dynamically and loosely federating themselves for cooperation, taking care not to overtax their available resources. This book presents a roadmap to these concepts which are summarized as cooperating objects.

My husband worked for the institute and one day came home very excited about a new method for pre-op treatment of patients resistant to regular medicine, or allergic to it, etc. Just imagine a rubber mat pierced with needles and a patient has to lie down on it and to stay for an hour or more. They say, it never pierces the skin and hurts for only minute or two, then people get warmed and relaxed, stop sneezing, coughing, and their blood pressure gets normal. In a few days they are ready for their surgeries. The first thing I thought, was:

It's probably because there are so many needles that eventually some of them reach proper acupuncture points. Later I discovered that the inventor's logic had indeed worked exactly this way...

Hawksworth, Manoela Pessoa de Miranda, 2020-11-30 This book covers a broad spectrum of topics related to GMOs and allied new gene-based technologies, biodiversity, and ecosystem processes, bringing together the contributions of researchers and regulators from around the world. The aim is to offer a clear view of the benefits and effects of genetically modified crops, insects, and other animals on the soil microbiome and ecological processes. Contributors examine issues related to the development of risk assessment procedures and regulations designed to maximize benefits while minimizing risks. Beyond the scientific challenges of GMOs, the book explores the broad and contentious terrain of ethical considerations. The contributors discuss such questions as the unintended, possibly unforeseen, consequences of releasing GMOs into ecosystems, and the likelihood that the full effects of GMOs could take years, even decades, of close monitoring to become evident. The importance of developing a precautionary approach is stressed. The final chapter describes the critical issues of governance and regulation of new and emerging gene-based technologies, as nations grapple with the consequences of adopting the Cartagena Protocol on Biosafety (CPB). The volume includes an extensive Annex which outlines legal perspectives on the state of GMO governance around the world, with more than 20 examples from nations in Africa, South and Central America, Asia, Australasia, and Europe.
