Tappia, Heather Blewett, 2020-06-17 There is unequivocal experimental, epidemiological, and clinical evidence demonstrating a correlation between diet and increased risk of cardiovascular disease (CVD). While nutritionally-poor diets can have a significant negative impact on cardiovascular health, dietary interventions with specific nutrients and/or functional foods are considered cost-effective and efficient components of prevention strategies. It has been estimated that nutritional factors may be responsible for approximately 40% of all CVD. Indeed, in one of the seminal studies conducted on modifiable risk factors and heart health (the INTERHEART study), >90% of all myocardial infarctions were attributed to preventable environmental factors with nutrition identified as one of the important determinants of CVD. There is an increasing public interest in and scientific investigation into establishing dietary approaches that can be undertaken for the prevention and treatment of CVD. This Special Issue provides an insight into the influential role of nutrition and dietary habits on cardiovascular health and disease, as well as their mechanisms of therapeutic and preventive action.

sijo psychology and wellness associates: *The Mists of Rāmañña* Michael A. Aung-Thwin,

2017-04-01 Scholars have long accepted the belief that a Theravada Buddhist Mon kingdom,

Rāmaññadesa, flourished in coastal Lower Burma until it was conquered in 1057 by King Aniruddha of Pagan—which then became, in essence, the new custodian and repository of Mon culture in the Upper Burmese interior. This scenario, which Aung-Thwin calls the Mon Paradigm, has circumscribed much of the scholarship on early Burma and significantly shaped the history of Southeast Asia for more than a century. Now, in a masterful reassessment of Burmese history, Michael Aung-Thwin reexamines the original contemporary accounts and sources without finding any evidence of an early Theravada Mon polity or a conquest by Aniruddha. The paradigm, he finds, cannot be sustained. How, when, and why did the Mon Paradigm emerge? Aung-Thwin meticulously traces the paradigm's creation to the merging of two temporally, causally, and contextually unrelated Mon and Burmese narratives, which were later synthesized in English by colonial officials and scholars. Thus there was no single originating source, only a late and mistaken conflation of sources. The conceptual, methodological, and empirical ramifications of these findings are significant. The prevalent view that state-formation began in the maritime regions of Southeast Asia with trade and commerce rather than in the interior with agriculture must now be reassessed. In addition, a more rigorous look at the actual scope and impact of a romanticized Mon culture in the region is required. Other issues important to the field of early Burma and Southeast Asian studies, including the process of Indianization, the characterization of classical states, and the advent and spread of Theravada Buddhism, are also directly affected by Aung-Thwin's work. Finally, it provides a geo-political, cultural, and economic alternative to what has become an ethnic interpretation of Burma's history.
