**the wellness experience wellington: Performing the State** Paul Henman, Alison Gable, 2018-10-22 Performance measurement is now a key management tool used by government to assess and enhance public services. It is also used as a tool for public sector transparency and accountability. Despite these noble objectives, performance measurement can also generate counterproductive and sometimes paradoxical outcomes. This book innovatively conceptualises performance measurement as a 'policy instrument'. Such an approach necessarily invites careful and critical examination of instances of the formation, application and contestation of particular performance measurement regimes, the tools used to measure performance, the way in which

performance data is produced and used, and the complex dynamics between professionals, managers and service users that arise from these practices. The book provides detailed empirical examples of performance measurement in the delivery of health, schooling and child welfare services, as well as the problematics of assessing national wellbeing. Instead of a form of scientific and rational management, performance measurement is revealed as an intrinsically contested, socio-politically charged and value laden practice. The book concludes that to succeed in delivering authentic performance improvements public sector managers must be aware of these complex, paradoxical dynamics and the circumstances that make performance measurement perform. This book was originally published as a special issue of Policy Studies.

**the wellness experience wellington: Tourist Experience and Fulfilment** Sebastian Filep, Philip

Pearce, 2013-07-31 What makes life worth living? Many people would argue that it is fulfilling experiences. These experiences are characterised by feelings of joy and pleasure, positive relationships and a sense of engagement, meaning and achievement. Tourism is arguably one of the largest self-initiated commercial interventions to promote well being and happiness on the global scale but yet there is absence in the literature on the topic of fulfilling tourist experiences from psychological perspectives. Drawing on insights and theories from the research field of positive psychology (the study of well being), this is the first edited book to evaluate tourist experiences from positive psychology perspectives. The volume addresses the important topic of fulfilment through the lens of the world's largest social global phenomenon tourism. In doing so, the book refreshes and challenges some aspects of tourist behaviour research. The chapters are grouped under three broad sections which reflect a range of positive psychological outcomes that personal holiday experiences can produce, namely; happiness and humour; meaning and self-actualisation and health and restoration. The book critically explores these fulfilling experiences from interdisciplinary perspectives and includes research studies from wide range of geographical regions. By analysing the contemporary fulfilling tourist experiences the book will provide further understanding of tourist behaviour and experience. Written by leading academics this significant volume will appeal to those interested in Tourism and Positive Psychology.

This book sets an agenda for mental health services internationally, by converting these ideas of recovery into an action plan for professionals. The underlying principles are explored, and five reasons identified for why supporting recovery should be the primary goal. **the wellness experience wellington: Indigenous and Tribal Peoples and Cancer** Gail Garvey, 2024 Although cancer survival has improved markedly in developed countries in recent decades, not all groups have benefited equally. In particular, Indigenous and Tribal peoples continue to have poorer cancer outcomes than their non-Indigenous counterparts. The available evidence suggests these disparities are linked to a complex combination of factors, including higher incidence of cancers associated with a high case fatality, later stage of diagnosis, reduced access to cancer treatment, and poorer overall health. Much research is underway to explore approaches to improving health system responses for Indigenous and Tribal peoples. A developing evidence base is supporting effective translation of knowledge into practice. This book offers a global perspective on this evidence base, written from Indigenous perspectives. This book is the first comprehensive publication to report on cancer incidence, mortality, prevalence, survival, and inequities for Indigenous and Tribal peoples globally, with the aim of enhancing global efforts to improve

outcomes for these populations. Its content and approach are led by Indigenous researchers with international reputations in health and cancer research. Chapters provide important information and data to support Indigenous-specific, targeted cancer awareness and early detection campaigns. This book goes beyond a discussion of the issues and challenges in Indigenous health, with a strengths-based approach to discussing successful health interventions, research projects, research translation, and living well both with and beyond cancer. Higa, M.E.L. van den Berg, 2021-04-29 The need to promote academic activities in telehealth remains a high priority as the discipline expands into new areas of healthcare. Response during 2020 to the COVID-19 pandemic has provided an excellent example of the rapid diversification and impact attainable with telehealth, and may kindle a new momentum for accelerated service design and adoption processes in the future. This book, *Telehealth Innovations in Remote Healthcare Services Delivery*, is the tenth in the Global Telehealth series. Due to the prevailing COVID-19 pandemic and the restrictions placed on academic gatherings, the organizers issued a general call for contributions, with the intention of attracting a wide cross-section of contributions reflecting the breadth of different aspects of telehealth internationally. **the wellness experience wellington:** Mental Health among Higher Education Faculty, Administrators, and Graduate Students Teresa Heinz Housel, 2021-09-23 *Mental Health among Higher Education Faculty, Administrators, and Graduate Students* addresses how many academics who experience mental distress or mental illness are afraid to speak out because of cultural stigma and fears of career repercussions. Many academics' reluctance to publicly disclose their struggles complicates attempts to understand their experiences through research or popular media, or to

develop targeted mental health resources and institutional policies. This volume builds on the existing studies in this greatly under-researched area of mental health among faculty, administrators, and graduate students in higher education. The chapters' research findings will help institutions communicate about mental health in culturally-competent and person-centered ways; create work environments conducive to mental well-being; and support their academic employees who have mental health challenges. This book argues that discussions of health and wellness, equity, workload expectations and productivity, and campus diversity must also cover chronic illness and disability, which include mental health and mental illness.

**the wellness experience wellington: The Mental Health of Medical Students** , 2024-01-19

Medical students are the medical workforce of the future, responsible for both individual and population health. With an ageing global population, changes brought about by the COVID-19 pandemic, and the increased computerisation and roboticization of medicine, doctors will require ever more flexibility, foresight, and courage going forward. It is crucial that their training equips them for the challenges ahead. However, recent research has found worryingly high levels of stress and burnout amongst these individuals, leading to more students dropping out or leaving the profession early. This volume presents research findings on the rates of burnout in medical students from around the world and provides ideas for a model of care to help educators and individuals take steps towards better student wellbeing. The first section covers the development of medical teaching, likely future directions of healthcare and the role of doctors, the current global situation in high-, middle-, and low- income countries, and how we measure and define burnout. The second section analyses case studies from countries across the globe, reviewing regional themes of burnout,

mental health symptoms, and stressors. The third section hears from the medical students themselves, considers circumstances such as studying abroad, or studying with health conditions, and looks at potential interventions and good practice for the future, including the role of the universities and institutions, and advice to medical students on how to look after themselves. A truly international collaboration with a focus on medical student mental health and wellbeing, this book will be of interest to medical education professionals, occupational health physicians, and medical practitioners, as well as researchers, medical students, and trainees.

**the wellness experience wellington: *Promoting Health and Well-being in Social Work Education*** Beth R. Crisp, Liz Beddoe, 2013-10-18 Social work educators can play an important part in ensuring that the promotion of health and well-being is firmly on the social work agenda for service users, as well as for students and educators. Nevertheless, this has not been a priority within social work education and presents a challenge which requires some re-thinking in terms of curriculum content, pedagogy, and how social workers respond to social problems. Furthermore, if the promotion of health and well-being is not considered a priority for social workers, this raises important questions about the role and relevance of social work in health, and thus poses challenges to social work education, both now and in the future. This book contains contributions from social work educators from Australia, America, Canada, New Zealand and the UK. They reflect on how best to prepare students to put health and well-being to the forefront of practice, drawing on research on quality of life, subjective well-being, student well-being, community participation and social connectedness, religion and spirituality, mindful practices, trauma and health inequalities. This book is an extended version of a special issue of Social Work Education.
