urban wellness group medical clinic: Homelessness, Health, and Human Needs Institute of Medicine, Committee on Health Care for Homeless People, 1988-02-01 There have always been homeless people in the United States, but their plight has only recently stirred widespread public reaction and concern. Part of this new recognition stems from the problem's prevalence: the number of homeless individuals, while hard to pin down exactly, is rising. In light of this, Congress asked the Institute of Medicine to find out whether existing health care programs were ignoring the homeless or delivering care to them inefficiently. This book is the report prepared by a committee of experts who examined these problems through visits to city slums and impoverished rural areas, and through an analysis of papers written by leading scholars in the field.

urban wellness group medical clinic: Communities in Action National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods

also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Gurung, 2014-04-21 Led by a UCLA-trained health psychologist, a team of experts describes non-traditional treatments that are quickly becoming more common in Western society, documenting cultural variations in health and sickness practices to underscore the diversity among human society. This unique two-volume set describes the variety of cultural approaches to health practiced by people of varying cultural heritages and places them in stark context with traditional Western approaches to health care and medicine. Examining health practices such as Ayurveda, an ancient system of medicine that focuses on the body, the sense organs, the mind, and the soul; and traditional Chinese medicine (TCM), the author examines why these different approaches can explain some of the cultural variations in health behaviors, differences in why people get sick, and how they cope with illness. Traditional health care providers of all kinds—including clinicians, counselors, doctors, nurses, and social workers—will all greatly benefit by learning about vastly different approaches to health, while general readers and scholars alike will gain insight into the rich diversity of world culture and find the material fascinating.

urban wellness group medical clinic: Retooling for an Aging America Institute of

Medicine, Board on Health Care Services, Committee on the Future Health Care Workforce for Older Americans, 2008-08-27 As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

urban wellness group medical clinic: Health Colonialism Shiloh Krupar, 2023-03-28 The role of American hospital expansions in health disparities and medical apartheid Health Colonialism considers how U.S. urban development policies contribute to the uneven and unjust distribution of health care in this country. Here, Shiloh Krupar investigates the racially inequitable effects of elite U.S. hospitals on their surrounding neighborhoods and their role in consolidating frontiers of land primed for redevelopment. Naming this frontier "medical brownfields," Krupar shows how hospitals leverage their domestic real estate empires to underwrite international prospecting for patients and overseas services and specialty clinics. Her pointed analysis reveals that decolonizing health care efforts must scrutinize the land practices of nonprofit medical institutions and the liberal foundations of medical apartheid perpetuated by globalizing American health care.

urban wellness group medical clinic: *Understanding Racial and Ethnic Differences in Health in Late Life* National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Panel on Race, Ethnicity, and Health in Later Life, 2004-09-08 As the population of older Americans grows, it is becoming more racially and ethnically diverse. Differences in health by racial and ethnic status could be increasingly consequential for health policy and programs. Such differences are not simply a matter of education or ability to pay for health care. For instance, Asian Americans and Hispanics appear to be in better health, on a number of indicators, than White Americans, despite, on average, lower socioeconomic status. The reasons are complex, including possible roles for such factors as selective migration, risk behaviors, exposure to various stressors, patient attitudes, and geographic variation in health care. This volume, produced by a multidisciplinary panel, considers such possible explanations for racial and ethnic health differentials within an integrated framework. It provides a concise summary of available research and lays out a research agenda to address the many uncertainties in current knowledge. It recommends, for instance, looking at health differentials across the life course and deciphering the links between factors presumably producing differentials and biopsychosocial mechanisms that lead to impaired health.

urban wellness group medical clinic: Adolescent Health Services Institute of Medicine, National Research Council, Board on Children, Youth, and Families, Committee on Adolescent Health Care Services and Models of Care for Treatment, Prevention, and Healthy Development, 2008-12-03 Adolescence is a time of major transition, however, health care services in the United States today are not designed to help young people develop healthy routines, behaviors, and relationships that they can carry into their adult lives. While most adolescents at this stage of life are thriving, many of them have difficulty gaining access to necessary services; other engage in risky

behaviors that can jeopardize their health during these formative years and also contribute to poor health outcomes in adulthood. Missed opportunities for disease prevention and health promotion are two major problematic features of our nation's health services system for adolescents. Recognizing that health care providers play an important role in fostering healthy behaviors among adolescents, Adolescent Health Services examines the health status of adolescents and reviews the separate and uncoordinated programs and services delivered in multiple public and private health care settings. The book provides guidance to administrators in public and private health care agencies, health care workers, guidance counselors, parents, school administrators, and policy makers on investing in, strengthening, and improving an integrated health system for adolescents.

urban wellness group medical clinic: *Handbook of Global Urban Health* Igor Vojnovic, Amber Pearson, Gershim Asiki, Geoff DeVerteuil, Adriana Allen, 2019-05-09 Through interdisciplinary and multidisciplinary perspectives, and with an emphasis on exploring patterns as well as distinct and unique conditions across the globe, this collection examines advanced and cutting-edge theoretical and methodological approaches to the study of the health of urban populations. Despite the growing interest in global urban health, there are limited resources available that provide an extensive and advanced exploration into the health of urban populations in a transnational context. This volume offers a high-quality and comprehensive examination of global urban health issues by leading urban health scholars from around the world. The book brings together a multi-disciplinary perspective on urban health, with chapter contributions emphasizing disciplines in the social sciences, construction sciences and medical sciences. The co-editors of the collection come from a number of different disciplinary backgrounds that have been at the forefront of urban health research, including public health, epidemiology, geography, city planning and urban design. The book is intended to be a reference in global urban health for research libraries and faculty collections. It will also be appropriate as a text for university class adoption in upper-division under-graduate courses and above. The proposed volume is extensive and offers enough breadth and depth to enable it to be used for courses emphasizing a U.S., or wider Western perspective, as well as courses on urban health emphasizing a global context.

Higher Education Alexander, Cynthia J., Tureen, Amy, 2022-04-29 Wellbeing is foundational to citizens' individual and collective ability to acknowledge, address, and alleviate ongoing struggles, shared risks, and the unprecedented challenges of our time. A holistic focus on wellness across campus communities is timely and important, given that national and global justice movements are calling upon post-secondary institutions to address the ways in which education systems have been reproducing dominant narratives, reinforcing systemic discrimination, and retaliating against education leaders who work to disrupt structural inequalities. Leadership Wellness and Mental Health Concerns in Higher Education offers diverse perspectives about whether and how campus leaders around the world are sustaining and advancing health and wellness in unprecedented times and amplifies diverse voices in the exploration of how to advance individual and collective wellbeing in higher education. Covering a wide range of topics such as stress management and burnout, this reference work is ideal for academicians, scholars, researchers, administrators, practitioners, instructors, and students.

urban wellness group medical clinic: Mobilizing the Community for Better Health Allan J. Formicola, Lourdes Hernández-Cordero, 2011 From 1999 to 2009, The Northern Manhattan Community Voices Collaborative put Columbia University and its Medical Center in touch with surrounding community organizations and churches to facilitate access to primary care, nutritional improvement, and smoking cessation, and to broker innovative ways to access healthcare and other social services. This unlikely partnership and the relationships it forged reaffirms the wisdom of joining town and gown to improve a community's well-being. Staff members of participating organizations have coauthored this volume, which shares the successes, failures, and obstacles of implementing a vast community health program. A representative of Alianza Dominicana, for example, one of the country's largest groups settling new immigrants, speaks to the value of community-based organizations in ridding a neighborhood of crime, facilitating access to health insurance, and navigating the healthcare system. The editors outline the beginnings and infrastructure of the collaboration and the relationship between leaders that fueled positive outcomes. Their portrait demonstrates how grassroots solutions can create productive dialogues that help resolve difficult issues.

urban wellness group medical clinic: Telemedicine Institute of Medicine, Committee on Evaluating Clinical Applications of Telemedicine, 1996-10-08 Telemedicine—the use of information and telecommunications technologies to provide and support health care when distance separates the participants—is receiving increasing attention not only in remote areas where health care access is troublesome but also in urban and suburban locations. Yet the benefits and costs of this blend of medicine and digital technologies must be better demonstrated before today's cautious decision-makers invest significant funds in its development. Telemedicine presents a framework for

evaluating patient care applications of telemedicine. The book identifies managerial, technical, policy, legal, and human factors that must be taken into account in evaluating a telemedicine program. The committee reviews previous efforts to establish evaluation frameworks and reports on results from several completed studies of image transmission, consulting from remote locations, and other telemedicine programs. The committee also examines basic elements of an evaluation and considers relevant issues of quality, accessibility, and cost of health care. Telemedicine will be of immediate interest to anyone with interest in the clinical application of telemedicine.

However, the United States faces a shortage of affordable and accessible housing for low-income older adults and individuals living with disabilities. This shortage is expected to grow over the coming years given the population shifts leading to greater numbers of older adults and of individuals living with disabilities. Housing is a social determinant of health and has direct effects on health outcomes, but this relationship has not been thoroughly investigated. In December 2016, the National Academies of Sciences, Engineering, and Medicine convened a public workshop to better understand the importance of affordable and accessible housing for older adults and people with disabilities, the barriers to providing this housing, the design principles for making housing accessible for these individuals, and the features of programs and policies that successfully provide affordable and accessible housing that supports community living for older adults and people with disabilities. This publication summarizes the presentations and discussions from the workshop.
