xpress wellness urgent care sapulpa: Symposium on Development of Upper Respiratory Anatomy and Function James F. Bosma, Jane Showacre, 1975 This Symposium resulted from a linkage of interests of the National Institute of Child Health and Human Development, the National Institute of Dental Research, and the Fogarty International Center. The Perinatal Biology and Infant Mortality Program of the NICHD sponsors investigations of pregnancy, maternal health, intrauterine growth and infant development. A major role is in the instigation and the support of research pertinent to the sudden infant death syndrome (SIDS). The NIDR Section on Oral and Pharyngeal Development studies the infant performances of feeding, vocalization, and positioning, relating these to changes in local sensory resources. The FIC, through its Conference and Seminar Program, furthers international research pertinent to medicine. This conference of developmental anatomists and physiologists with clinicians concerned with the developmentally calendared entity of SIDS resulted in a productive and provocative exchange. We learned from each other and with each other. This volume is composed of chapters which were prepared after the conference, based in varying degree on the typescript of the spoken presentations. The questions and comments of the discussions were edited by the contributors and the responses by the chapter authors.

xpress wellness urgent care sapulpa: *Pediatric and Adolescent Obstetrics and Gynecology* J.P. Lavery, J.S. Sanfilippo, 2012-12-06 This book covers a broad area-the problems associated with female development-from the appearance of gender abnormalities in the delivery room, through the trials of pubescence, early maturation, and precocious child bearing. Experts from many diverse fields of scholarship have contributed chapters covering a wide range of subjects. The contributors have concentrated on their areas of expertise. The broad range of this book is unique; no other textbook covers as many areas. The diversity of subjects covered will help the reader (gynecologist, pediatrician, nurse, health counselor, social worker, or psychologist) to understand both the physical and psychological problems which beset the female, from birth to adolescence. Because of the wealth of information presented, we hope that this volume will serve as a reference source and as a basis for further in-depth studies. The editors wish to express sincere thanks for the efforts above and beyond the call of duty on the part of many members of our staff. A special thank you to Carrie Marcell R.N., our research nurse and University of Louisville coordinator for this project, for her time and effort in putting up with the vagaries of the editors; and to Betty Jones and Linda Grear for their fine secretarial work. Special recognition is due Sue Koenig, whose patience with us in adapting the text to our word processor made our job a great deal easier.
