animal wellness hospital of highlands: Natural Pet Care Gary Null, 2011-01-04 Right now, there are more pets in America than people, and many count their pets among the most beloved members of their family. However, a surprising number of pet owners are not aware that the lifestyle they provide their companions may not be a healthy one. Gary Null has helped countless Americans improve their diets and their health with his natural approach to healthy living and scepticism of the healthcare and pharmaceutical industries. Now, with *Natural Pet Care*, he carefully and compassionately lays out the ways we can improve our pets' health and lives. *Natural Pet Care* includes *Animals on the Move*, which explains the importance of proper exercise, *Everybody in the Tub!*, which covers natural bathing and grooming products and techniques, *The Impetuous Pet*, which helps in understanding your animal's behavior, and appendices for those seeking holistic veterinary care, pet friendly lodgings and animal friendly organizations. *Natural Pet Care* also provides sources for natural pet foods and products, while scrutinizing the pet food industry. He describes, for instance, that almost any dog owner would be horrified to learn what really goes into most commercial dog foods—even some of the more expensive brands—including slaughterhouse throwaways and diseased animal parts. As an alternative, Null offers *The Tao of Chow*, in which he recommends countless natural alternatives that can easily be made at home—recipes included—and which can prolong and improve your pet's life. With this book on your reference shelf, you and your spectacular pet will be ready to tackle anything naturally! *Natural Pet Care* deals extensively with the health of dogs and cats, but also is devoted to other common pets, including birds, rabbits, ferrets, fish, horses, rodents, and snakes. Long overdue, Gary Null's *Natural Pet Care* will help pet owners provide their furry, feathered, and scaled companions with the healthy lifestyle they need and deserve.

Manjunatha Ulavathi Shettar, 2021-09-17 What is the source of all the tragedies in today's modern world? Historian and thinker Will Durant concludes that time has been a source of religious distraction. Considering the phenomena around us, it is the home of all the tragedies that have made people feel religious. Buyer ideologies are responsible for the wars that haunt the world today. There has been a conflict between these two values since the time of the orphans. In the past, humanity's original quality of violence has prevailed. Modern society has embraced various forms of violence. Human history is characterized by numerous epidemics and several worldwide epidemics. While some pandemics have caused the pronouncement of millions of people, some other ubiquitous diseases have sometimes brought entire civilizations to the brink of extinction. Microscopic organisms, invisible insects; these are like insects. All the great novelists who have no power in front of them are helpless. The great man, who brought these insects to the world along with humans, plays a neutral role in the pestilence he has demonstrated. Indeed, in today's developing countries, failing to adequately manage basic amenities, including education, health and employment, will be a poor decision in terms of future development. The history of the world has already informed us the global truth that the war has begun, not ended.

There has to be a better way, a biblical way, for mamas to grow and thrive. As a daughter of Christ, you have been called to be more than an average mama. Attaining excellence doesn't have to be unsettling but it will take committed focus and a desire to parent well according to God's grace and for His glory. M is for Mama offers advice, encouragement, and scripturally sound strategies seasoned with a little bit of humor to help you embrace the challenge of biblical motherhood and raise your children with love and wisdom. Mama, you are worthy of the awesome responsibility God has given you. Now it's time to start believing you can live up to it.

animal wellness hospital of highlands: *Birds and People* Mark Cocker, 2014-03-17 There are 10,500 species of bird worldwide and wherever they occur people marvel at their glorious colours and their beautiful songs. We also trap and consume birds of every kind. Yet birds have not just been good to eat. Their feathers, which keep us warm or adorn our costumes, give birds unique mastery over the heavens. Throughout history their flight has inspired the human imagination so that birds are embedded in our religions, folklore, music and arts. Vast in both scope and scale, *Birds and People* explores and celebrates this relationship and draws upon Mark Cocker's 40 years of observing and thinking about birds. Part natural history and part cultural study, it describes and maps the entire spectrum of our engagements with birds, drawing in themes of history, literature, art, cuisine, language, lore, politics and the environment. In the end, this is a book as much about us as it is about birds. *Birds and People* has been stunningly illustrated by one of Europe's best wildlife photographers, David Tipling, who has travelled in 39 countries on seven continents to produce a breathtaking and unique collection of photographs. The book is as important for its visual riches as it is for its groundbreaking content. *Birds and People* is also exceptional in that the author has solicited contributions from people worldwide. Personal anecdotes and stories have come from more than 650 individuals in 81 different countries. They range from university academics to Mongolian eagle hunters, and from Amerindian shamans to some of the most celebrated writers of our age. The sheer multitude of voices in this global chorus means that *Birds and People* is both a source book on why we cherish birds and a powerful testament to their importance for all humanity.

animal wellness hospital of highlands: Heart of the Blue Ridge Randolph P. Shaffner, 2004-12 On March 6, 1875, Sam Kelsey and C. C. Hutchinson paid \$2 an acre for just over a square

mile of the Sugartown Highlands in the Blue Ridge Mountains and began building a town 4,000 feet above the clouds. Perched on the shoulders of Satulah, Fodderstack, Black Rock, Whiteside, and Shortoff mountains, the Highlands Plateau was shaded by primeval forests of giant hardwoods and pyramidal pines and drained by quiet crystal streams and thundering cataracts that plunged over precipitous crags and down laurel-fringed gorges. Offering restoration of health and soul, this paradisaal settlement provided common ground for settlers from both the North and South a decade after their great Civil War. By 1883 300 immigrants from twenty-seven Northern and Southern states were calling Highlands home. This is a history of the origin and growth of a town with a Northern climate set high in the South, including the ever-continuing struggle between those who would preserve and those who would exploit its unique appeal to year-round residents and summer visitors. In its attempt to be all-inclusive, this book contains much detail, but it also embodies a collection of matchless characters and personalities and their stories that have given the town and its history remarkable color and enduring interest. In short, the big world is here mirrored in the small world where little things that happen are no less important, indeed more so.

Housing is becoming increasingly important to health in light of urban growth, ageing populations and climate change. Based on newly commissioned systematic reviews, the guidelines provide recommendations relevant to inadequate living space (crowding), low and high indoor temperatures, injury hazards in the home, and accessibility of housing for people with functional impairments. In addition, the guidelines identify and summarize existing WHO guidelines and recommendations related to housing, with respect to water quality, air quality, neighbourhood noise, asbestos, lead, tobacco smoke and radon. The guidelines take a comprehensive, intersectoral perspective on the issue of housing and health and highlight co-benefits of interventions addressing several risk factors at the same time. The WHO Housing and health guidelines aim at informing housing policies and regulations at the national, regional and local level and are further relevant in the daily activities of implementing actors who are directly involved in the construction, maintenance and demolition of housing in ways that influence human health and safety. The guidelines therefore emphasize the importance of collaboration between the health and other sectors and joint efforts across all government levels to promote healthy housing. The guidelines' implementation at country-level will in particular contribute to the achievement of the Sustainable Development Goals on health (SDG 3) and sustainable cities (SDG 11). WHO will support Member States in adapting the guidelines to national contexts and priorities to ensure safe and healthy

housing for all.
