annapolis veterinary and wellness: Cultural Dimensions of Well-Being Clementine K. Fujimura, Simone Nommensen, 2017-11-22 This book presents a cultural history of human-animal relations in Germany, Japan, Russia and the United States, with a focus on the uses of animals for comfort, healing and in developing a sense of well-being. Fujimura and Nommensen discuss the contexts in which the culture of wellbeing has developed and incorporated alternative therapies with animals. The authors turn to qualitative research conducted over a period of two years in veterinary clinics, hospices, reading programs, search and rescue organizations as well as an extensive review of existing literature on cultural studies of human-animal relations to inform their analysis of complex ways in which humans and animals interact. The extent to which animals are accepted either as members of society or, in contrast, as mere material possessions poses a cultural contradiction leading to questions of the ethical treatment of animals.

annapolis veterinary and wellness: Black Fatigue Mary-Frances Winters, 2020-09-15 This is the first book to define and explore Black fatigue, the intergenerational impact of systemic racism on the physical and psychological health of Black people—and explain why and how society needs to collectively do more to combat its pernicious effects. Black people, young and old, are fatigued, says award-winning diversity and inclusion leader Mary-Frances Winters. It is physically, mentally, and emotionally draining to continue to experience inequities and even atrocities, day after day, when justice is a God-given and legislated right. And it is exhausting to have to constantly explain this to white people, even—and especially—well-meaning white people, who fall prey to white fragility and too often are unwittingly complicit in upholding the very systems they say they want dismantled. This book, designed to illuminate the myriad dire consequences of “living while Black,” came at the urging of Winters's Black friends and colleagues. Winters describes how in every aspect of life—from economics to education, work, criminal justice, and, very importantly, health outcomes—for the most part, the trajectory for Black people is not improving. It is paradoxical that, with all the attention focused over the last fifty years on social justice and diversity and inclusion, little progress has been made in actualizing the vision of an equitable society. Black people are quite literally sick and tired of being sick and tired. Winters writes that “my hope for this book is that it will provide a comprehensive summary of the consequences of Black fatigue, and awaken activism in those who care about equity and justice—those who care that intergenerational fatigue is tearing at the very core of a whole race of people who are simply asking for what they deserve.”

Founded in the late 1870s, NIH has produced extraordinary advances in the treatment of common and rare diseases and leads the world in biomedical research. It is a critical national resource that plays an important role in supporting national security. The 310-acre Bethesda campus supports some 20,000 employees and contractors, and it contains more than 12 million square feet of facilities divided amongst nearly 100 buildings, including the largest dedicated research hospital in the world. The Bethesda campus supports some of the most sophisticated and groundbreaking biomedical research in the world. However, while some new state-of-the-art buildings have been constructed in recent years, essential maintenance for many facilities and the campus overall has been consistently deferred for many years. The deteriorating condition of NIH's built environment is now putting its ability to fulfill its mission at substantial risk. Managing the NIH Bethesda Campus's Capital Assets for Success in a Highly Competitive Global Biomedical Research Environment identifies the facilities in greatest need of repair on the Bethesda campus and evaluates cost estimates to determine what investment is needed for the NIH to successfully accomplish its mission going forward.

annapolis veterinary and wellness: Vocational Rehabilitation Gordon Waddell, Vocational Rehabilitation Task Group, A. Kim Burton, Industrial Injuries Advisory Council, Nicholas Kendall, 2008-07-17 The aim of this review was to provide an evidence base for policy development on vocational rehabilitation - defined as whatever helps someone with a health problem to stay at, return to and remain at work. The focus was on adults of working age, the common health problems that account for two-thirds of long-term sickness (mild/moderate musculoskeletal, mental health and cardio-respiratory conditions) and work outcomes (staying at, returning to and remaining in work). Data from some 450 scientific reviews and reports were included in evidence tables. The review demonstrates that there is a strong scientific evidence base for many aspects of vocational rehabilitation, a good business case for it and more evidence on cost-benefits than for many health and social policy areas. Generic and condition-specific findings are reported, and practical suggestions offered for the differing types of people affected by health problems. Vocational rehabilitation should be a fundamental element of government strategy to improve the health of working age people.

annapolis veterinary and wellness: Silent Thunder Katy Payne, 1999-09-01 A natural history rich in observation of the animal world and how humans participate in it, *Silent Thunder* is also a passionate story of scientist Katy Payne's spiritual quest as she turns a keen eye on her role in this world. Starting with the story of her revolutionary discovery that elephants use infrasonic sounds—sounds below the range of human hearing—to communicate, Payne shares what she learned from her fascinating field research in Africa, research that reveals new insights into elephants' social lives. When five of the elephant families she studies are the victims of culling, Payne's approach to her research changes, as she fights valiantly to protect the elephants. The result of her research, and the touching insights gained from Africans she worked with and the elephants she studied, give a vivid impression of Payne's view from the front lines of the natural preservation effort. Like Peter Matthiessen's *The Snow Leopard* and the writings of Jane Goodall, *Silent Thunder* demonstrates how a commitment to all life can bring one's own into a new focus.

In a study of the issues related to the veterinary medical workforce, including demographics, workforce supply, trends affecting job availability, and capacity of the educational system to fill future demands, a National Research Council committee found that the profession faces important challenges in maintaining the economic sustainability of veterinary practice and education, building its scholarly foundations, and evolving veterinary service to meet changing societal needs. Many concerns about the profession came into focus following the outbreak of West Nile fever in 1999, and the subsequent outbreaks of SARS, monkeypox, bovine spongiform encephalopathy, highly pathogenic avian influenza, H1N1 influenza, and a variety of food safety and environmental issues heightened public concerns. They also raised further questions about the directions of veterinary medicine and the capacity of public health service the profession provides both in the United States and abroad. To address some of the problems facing the veterinary profession, greater public and private support for education and research in veterinary medicine is needed. The public, policymakers, and even medical professionals are frequently unaware of how veterinary medicine fundamentally supports both animal and human health and well-being. This report seeks to broaden the public's understanding and attempts to anticipate some of the needs and measures that are essential for the profession to fulfill given its changing roles in the 21st century.
