Best Algebra Books: Your Guide to Mastering Algebra

Introduction:

Are you struggling with algebra? Feeling overwhelmed by equations and variables? You're not alone! Many students find algebra challenging, but with the right resources, mastering it can be achievable and even enjoyable. This comprehensive guide explores the best algebra books available, catering to different learning styles and levels of understanding. We'll delve into various options, from beginner-friendly introductions to advanced texts for college students, helping you choose the perfect book to conquer your algebra challenges. We'll also analyze their strengths, weaknesses, and what makes them stand out in the crowded textbook market. Get ready to unlock the secrets of algebra and boost your mathematical prowess!

Choosing the Right Algebra Book: Factors to Consider

Before diving into specific recommendations, it's crucial to consider your individual needs and learning style. Ask yourself these questions:

What's your current algebra level? Are you a complete beginner, or do you need a refresher on specific topics? Are you preparing for a specific exam, like the SAT or ACT?

What's your learning style? Do you prefer visual learning, hands-on practice, or a more theoretical approach? Some books are highly visual, using diagrams and illustrations, while others are more text-heavy and focus on rigorous proofs.

What are your learning goals? Are you aiming for a deep understanding of algebraic concepts or simply aiming to pass a test?

Considering these factors will help you narrow down the best choices and avoid wasting time and money on unsuitable textbooks.

Top 5 Best Algebra Books for Different Needs

This section reviews five excellent algebra books, each targeting a different skill level and learning style.

1. "Algebra for Dummies" by Mary Jane Sterling:

This book is perfect for absolute beginners. Its approachable style, clear explanations, and real-world examples make even the most complex concepts understandable. It's ideal for self-learners or students needing a gentle introduction to the subject.

Strengths: Easy-to-understand language, practical examples, covers a broad range of topics.
Weaknesses: May not be challenging enough for advanced learners.

1. "Elementary Algebra" by Blitzer:

This widely-used textbook offers a comprehensive and structured approach to elementary algebra. It's a great option for high school students or those needing a thorough foundation in the subject. It combines clear explanations with ample practice problems.

Strengths: Comprehensive coverage, excellent problem sets, well-organized.
Weaknesses: Can be dense for some learners, less visual than some other options.

1. "College Algebra" by Blitzer:

This book is a natural progression from "Elementary Algebra" by the same author. It covers more advanced topics suitable for college-level courses, including functions, graphs, and exponential and logarithmic equations.

Strengths: Rigorous treatment of college-level topics, plenty of practice problems.
Weaknesses: Demanding for students lacking a strong foundation in elementary algebra.

1. "Algebra and Trigonometry" by Stewart, Redlin, and Watson:

This book provides a comprehensive introduction to algebra and trigonometry, making it ideal for students preparing for calculus. It emphasizes conceptual understanding and problem-solving skills.

Strengths: Strong emphasis on problem-solving, comprehensive coverage of both algebra and trigonometry.
Weaknesses: Can be challenging for students who are not strong in math.

1. "Prealgebra" by Elayn Martin-Gay:

For students who need to build a strong foundation before tackling algebra, this book is a valuable resource. It covers essential pre-algebra topics such as fractions, decimals, and basic equations, setting a solid groundwork for future success in algebra.

Strengths: Builds a solid foundation, covers pre-algebra concepts thoroughly, well-structured.

Weaknesses: May not be appropriate for students already comfortable with pre-algebra concepts.

Book Review: "Algebra and Trigonometry" by Stewart, Redlin, and Watson

Let's delve deeper into one specific title: "Algebra and Trigonometry" by Stewart, Redlin, and Watson.

Outline:

Introduction: Overview of algebra and trigonometry, their importance, and the book's structure.

Chapter 1-5: Covers fundamental algebraic concepts, including equations, inequalities, functions, and graphs.

Chapter 6-10: Explores trigonometric functions, identities, and their applications.

Chapter 11-15: Focuses on advanced topics like conic sections, sequences, series, and more.

Conclusion: Summary of key concepts and guidance for further study.

Detailed Explanation of the Outline:

Introduction: This section sets the stage, outlining the importance of algebra and trigonometry in various fields, from science and engineering to finance and economics. It highlights the book's systematic approach, guiding readers through the core concepts with clarity and precision.

Chapters 1-5 (Algebraic Foundations): These chapters provide a comprehensive review of foundational algebraic concepts. This includes solving linear and quadratic equations, working with inequalities, understanding functions and their graphs, and manipulating algebraic expressions. The focus is on building a strong conceptual understanding before tackling more advanced topics.

Chapters 6-10 (Trigonometry): This section introduces trigonometric functions, starting with the unit circle and their properties. It covers trigonometric identities, solving trigonometric equations, and applications of trigonometry to real-world problems. Visual aids and diagrams are commonly used to aid comprehension.

Chapters 11-15 (Advanced Topics): These later chapters delve into more advanced concepts, like conic sections (ellipses, parabolas, hyperbolas), sequences and series, and potentially introductions to calculus concepts. These sections are designed to prepare students for higher-level mathematics courses.

Conclusion: The conclusion summarizes the key concepts covered throughout the book, emphasizing their interconnections. It often provides suggestions for further study and resources, directing students toward advanced mathematics topics or specific applications relevant to their fields of interest.

FAQs:

1. What is the best algebra book for high school students? The best choice depends on the student's current skill level. "Elementary Algebra" by Blitzer or "Algebra for Dummies" (if they

need a gentler introduction) are good starting points.

1. Which book is ideal for college algebra? Blitzer's "College Algebra" or "Algebra and Trigonometry" by Stewart, Redlin, and Watson are excellent choices for college-level work.
1. Are there any free algebra books online? While complete textbooks are rare, many free resources are available online, including Khan Academy and open educational resources (OER).
1. How can I choose the best book for my learning style? Consider whether you prefer visual learning (look for books with lots of diagrams), hands-on practice (choose books with plenty of exercises), or a more theoretical approach.
1. What if I struggle with a particular concept? Most algebra books include detailed explanations and worked examples. Don't hesitate to seek help from a tutor or teacher.
1. Can I learn algebra entirely from a book? While a book is a valuable resource, supplementing it with online videos, practice problems, and potentially tutoring can enhance your learning experience.
1. How many practice problems should I solve? The more practice problems you solve, the better your understanding will become. Aim to work through as many problems as possible, focusing on those you find challenging.
1. What are the prerequisites for learning algebra? A solid understanding of arithmetic and basic mathematical concepts is essential. "Prealgebra" by Elayn Martin-Gay is a good option if you need to strengthen your pre-algebra skills.
1. How long will it take to learn algebra? The time required varies greatly depending on your prior knowledge, learning pace, and the depth of your learning goals.

best algebra books: A Course in Algebra Ernest Borisovich Vinberg, 2003-04-10 Presents modern algebra. This book includes such topics as affine and projective spaces, tensor algebra, Galois theory, Lie groups, and associative algebras and their representations. It is suitable for independent study for advanced undergraduates and graduate students.

best algebra books: Abstract Algebra Dan Saracino, 2008-09-02 The Second Edition of this classic text maintains the clear exposition, logical organization, and accessible breadth of coverage that have been its hallmarks. It plunges directly into algebraic structures and incorporates an unusually large number of examples to clarify abstract concepts as they arise. Proofs of theorems do more than just prove the stated results; Saracino examines them so readers gain a better impression of where the proofs come from and why they proceed as they do. Most of the exercises range from easy to moderately difficult and ask for understanding of ideas rather than flashes of insight. The new edition introduces five new sections on field extensions and Galois theory, increasing its versatility by making it appropriate for a two-semester as well as a one-semester course.

best algebra books: Linear Algebra Done Right Sheldon Axler, 1997-07-18 This text for a second course in linear algebra, aimed at math majors and graduates, adopts a novel approach by banishing determinants to the end of the book and focusing on understanding the structure of linear operators on vector spaces. The author has taken unusual care to motivate concepts and to simplify proofs. For example, the book presents - without having defined determinants - a clean proof that every linear operator on a finite-dimensional complex vector space has an eigenvalue. The book starts by discussing vector spaces, linear independence, span, basics, and dimension. Students are introduced to inner-product spaces in the first half of the book and shortly thereafter to the finite-dimensional spectral theorem. A variety of interesting exercises in each chapter helps students understand and manipulate the objects of linear algebra. This second edition features new chapters on diagonal matrices, on linear functionals and adjoints, and on the spectral theorem; some sections, such as those on self-adjoint and normal operators, have been entirely rewritten; and hundreds of minor improvements have been made throughout the text.

best algebra books: Precalculus Cynthia Y. Young, 2023-05-03 Cynthia Young's Precalculus, 4th edition helps students take the guesswork out of studying by offering them an easy to read and clear roadmap that tells them what to do, how to do it, and whether they did it right. With this revision, the author focuses on the most difficult topics in precalculus, bringing clarity to challenging learning objectives.

best algebra books: A Book of Abstract Algebra Charles C Pinter, 2010-01-14 Accessible but rigorous, this outstanding text encompasses all of the topics covered by a typical course in elementary abstract algebra. Its easy-to-read treatment offers an intuitive approach, featuring informal discussions followed by thematically arranged exercises. This second edition features additional exercises to improve student familiarity with applications. 1990 edition.

best algebra books: Basic Mathematics Serge Lang, 1988-01

best algebra books: Abstract Algebra I. N. Herstein, 1990

best algebra books: Algebra , 2006

best algebra books: Introduction to Linear Algebra Serge Lang, 2012-12-06 This is a short text in linear algebra, intended for a one-term course. In the first chapter, Lang discusses the relation between the geometry and the algebra underlying the subject, and gives concrete examples of the notions which appear later in the book. He then starts with a discussion of linear equations, matrices and Gaussian elimination, and proceeds to discuss vector spaces, linear maps, scalar products, determinants, and eigenvalues. The book contains a large number of exercises, some of

the routine computational type, while others are conceptual.

best algebra books: Discourses on Algebra Igor R. Shafarevich, 2012-12-06 Using various examples this monograph shows that algebra is one of the most beautiful forms of mathematics. In doing so, it explains the basics of algebra, number theory, set theory and probability. The text presupposes very limited knowledge of mathematics, making it an ideal read for anybody new to the subject. The author, I.R. Shafarevich, is well-known across the world as one of the most outstanding mathematicians of this century as well as one of the most respected mathematical writers.

best algebra books: Undergraduate Algebra Serge Lang, 2013-06-29 The companion title, Linear Algebra, has sold over 8,000 copies The writing style is very accessible The material can be covered easily in a one-year or one-term course Includes Noah Snyder's proof of the Mason-Stothers polynomial abc theorem New material included on product structure for matrices including descriptions of the conjugation representation of the diagonal group

best algebra books: Modern Algebra Seth Warner, 2012-08-29 Standard text provides an exceptionally comprehensive treatment of every aspect of modern algebra. Explores algebraic structures, rings and fields, vector spaces, polynomials, linear operators, much more. Over 1,300 exercises. 1965 edition.

best algebra books: Advanced Algebra Anthony W. Knap, 2007-10-11 Basic Algebra and Advanced Algebra systematically develop concepts and tools in algebra that are vital to every mathematician, whether pure or applied, aspiring or established. Advanced Algebra includes chapters on modern algebra which treat various topics in commutative and noncommutative algebra and provide introductions to the theory of associative algebras, homological algebras, algebraic number theory, and algebraic geometry. Many examples and hundreds of problems are included, along with hints or complete solutions for most of the problems. Together the two books give the reader a global view of algebra and its role in mathematics as a whole.

best algebra books: Challenging Problems in Algebra Alfred S. Posamentier, Charles T. Salkind, 2012-05-04 Over 300 unusual problems, ranging from easy to difficult, involving equations and inequalities, Diophantine equations, number theory, quadratic equations, logarithms, more. Detailed solutions, as well as brief answers, for all problems are provided.

best algebra books: Advanced Linear Algebra Steven Roman, 2007-12-31 Covers a notably broad range of topics, including some topics not generally found in linear algebra books Contains a discussion of the basics of linear algebra

best algebra books: Algebra Michael Artin, 2013-09-01 Algebra, Second Edition, by Michael Artin, is ideal for the honors undergraduate or introductory graduate course. The second edition of this classic text incorporates twenty years of feedback and the author's own teaching experience. The text discusses concrete topics of algebra in greater detail than most texts, preparing students for the more abstract concepts; linear algebra is tightly integrated throughout.

best algebra books: How to Solve Word Problems in Algebra, 2nd Edition Mildred Johnson, Timothy E. Johnson, 1993-01-21 Solving word problems has never been easier than with Schaum's How to Solve Word Problems in Algebra! This popular study guide shows students easy ways to solve what they struggle with most in algebra: word problems. How to Solve Word Problems in Algebra, Second Edition, is ideal for anyone who wants to master these skills. Completely updated, with contemporary language and examples, features solution methods that are easy to learn and remember, plus a self-test.

best algebra books: The Humongous Book of Algebra Problems W. Michael Kelley, 2008-07 Presents algebra exercises with easy-to-follow guidelines, and includes over one thousand problems in numerous algebraic topics.

best algebra books: Deep Learning Ian Goodfellow, Yoshua Bengio, Aaron Courville, 2016-11-10 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is

a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

best algebra books: Introduction to Algebra Richard Rusczyk, 2009

best algebra books: Introduction to Topology Theodore W. Gamelin, Robert Everist Greene, 2013-04-22 This text explains nontrivial applications of metric space topology to analysis. Covers metric space, point-set topology, and algebraic topology. Includes exercises, selected answers, and 51 illustrations. 1983 edition.

best algebra books: Linear Algebra As An Introduction To Abstract Mathematics Bruno Nachtergaele, Anne Schilling, Isaiah Lankham, 2015-11-30 This is an introductory textbook designed for undergraduate mathematics majors with an emphasis on abstraction and in particular, the concept of proofs in the setting of linear algebra. Typically such a student would have taken calculus, though the only prerequisite is suitable mathematical grounding. The purpose of this book is to bridge the gap between the more conceptual and computational oriented undergraduate classes to the more abstract oriented classes. The book begins with systems of linear equations and complex numbers, then relates these to the abstract notion of linear maps on finite-dimensional vector spaces, and covers diagonalization, eigenspaces, determinants, and the Spectral Theorem. Each chapter concludes with both proof-writing and computational exercises.

best algebra books: Forecasting: principles and practice Rob J Hyndman, George Athanasopoulos, 2018-05-08 Forecasting is required in many situations. Stocking an inventory may require forecasts of demand months in advance. Telecommunication routing requires traffic forecasts a few minutes ahead. Whatever the circumstances or time horizons involved, forecasting is an important aid in effective and efficient planning. This textbook provides a comprehensive introduction to forecasting methods and presents enough information about each method for readers to use them sensibly.

best algebra books: Linear Algebra Kuldeep Singh, 2013-10 This book is intended for first- and second-year undergraduates arriving with average mathematics grades ... The strength of the text is in the large number of examples and the step-by-step explanation of each topic as it is introduced. It is compiled in a way that allows distance learning, with explicit solutions to all of the set problems freely available online <http://www.oup.co.uk/companion/singh> -- From preface.

best algebra books: Concrete Abstract Algebra Niels Lauritzen, 2003-10-16 This book presents abstract algebra based on concrete examples and applications. All the traditional material with exciting directions.

best algebra books: Abstract Algebra John A. Beachy, William D. Blair, 1996

best algebra books: A Second Course in Linear Algebra Stephan Ramon Garcia, Roger A. Horn, 2017-05-11 A second course in linear algebra for undergraduates in mathematics, computer science,

physics, statistics, and the biological sciences.

best algebra books: Algebra 1 McDougal Littell Incorporated, Ron Larson, 2003

best algebra books: Linear Algebra Kenneth Hoffman, Ray Alden Kunze, 2015

best algebra books: College Algebra Jay Abramson, 2018-01-07 College Algebra provides a comprehensive exploration of algebraic principles and meets scope and sequence requirements for a typical introductory algebra course. The modular approach and richness of content ensure that the book meets the needs of a variety of courses. College Algebra offers a wealth of examples with detailed, conceptual explanations, building a strong foundation in the material before asking students to apply what they've learned. Coverage and Scope In determining the concepts, skills, and topics to cover, we engaged dozens of highly experienced instructors with a range of student audiences. The resulting scope and sequence proceeds logically while allowing for a significant amount of flexibility in instruction. Chapters 1 and 2 provide both a review and foundation for study of Functions that begins in Chapter 3. The authors recognize that while some institutions may find this material a prerequisite, other institutions have told us that they have a cohort that need the prerequisite skills built into the course. Chapter 1: Prerequisites Chapter 2: Equations and Inequalities Chapters 3-6: The Algebraic Functions Chapter 3: Functions Chapter 4: Linear Functions Chapter 5: Polynomial and Rational Functions Chapter 6: Exponential and Logarithm Functions Chapters 7-9: Further Study in College Algebra Chapter 7: Systems of Equations and Inequalities Chapter 8: Analytic Geometry Chapter 9: Sequences, Probability and Counting Theory

best algebra books: Linear Algebra Georgi? Evgen?evich Shilov, 1977-06-01 Covers determinants, linear spaces, systems of linear equations, linear functions of a vector argument, coordinate transformations, the canonical form of the matrix of a linear operator, bilinear and quadratic forms, Euclidean spaces, unitary spaces, quadratic forms in Euclidean and unitary spaces, finite-dimensional space. Problems with hints and answers.

best algebra books: Mathematics Form and Function Saunders MacLane, 2012-12-06 This book records my efforts over the past four years to capture in words a description of the form and function of Mathematics, as a background for the Philosophy of Mathematics. My efforts have been encouraged by lectures that I have given at Heidelberg under the auspices of the Alexander von Humboldt Stiftung, at the University of Chicago, and at the University of Minnesota, the latter under the auspices of the Institute for Mathematics and Its Applications. Jean Benabou has carefully read the entire manuscript and has offered incisive comments. George Glauberman, Carlos Kenig, Christopher Mulvey, R. Narasimhan, and Dieter Puppe have provided similar comments on chosen chapters. Fred Linton has pointed out places requiring a more exact choice of wording. Many conversations with George Mackey have given me important insights on the nature of Mathematics. I have had similar help from Alfred Aeppli, John Gray, Jay Goldman, Peter Johnstone, Bill Lawvere, and Roger Lyndon. Over the years, I have profited from discussions of general issues with my colleagues Felix Browder and Melvin Rothenberg. Ideas from Tarmo Toimela, Albrecht Dold, Richard Lashof, and Ib Madsen have assisted in my study of geometry. Jerry Bona and B.L. Foster have helped with my examination of mechanics. My observations about logic have been subject to constructive scrutiny by Gert Müller, Marian Boykan Pour-El, Ted Slaman, R. Voreadou, Volker Weispfennig, and Hugh Woodin.

best algebra books: The Best Algebra 2/Precalculus Book Ever Jonathan Cheng, 2021-04-09 Do you want to explore Algebra 2 and Precalculus More Deeply? Then make sure to check out the 2nd Edition of The Best Algebra 2/ Precalculus Book Ever! With over 1000 problems arranged into 14 essential content chapters, this book will help deepen your understanding of Algebra 2 and Precalculus, whether that be self study or for supplementing a course. Topics Covered: Algebra Review, Radical Functions, Exponential/Logarithmic Functions, Rational Functions, Sequences and Series, Counting and Probability, Trigonometric Functions, Complex Numbers, Conics, Vectors and Matrices, Polar/Parametric Functions, Introduction to Calculus

best algebra books: The Best ACT Math Books Ever, Book 1 Brooke P. Hanson, 2019-03-14 An in-depth study guide for the ACT math section by a perfect scoring tutor. Book 1 in a two-book

series.

best algebra books: *Algebra and Trigonometry* Sheldon Axler, 2011-03-08 Axler Algebra & Trigonometry is written for the two semester course. The text provides students with the skill and understanding needed for their coursework and for participating as an educated citizen in a complex society. Axler Algebra & Trigonometry focuses on depth, not breadth of topics by exploring necessary topics in greater detail. Readers will benefit from the straightforward definitions and plentiful examples of complex concepts. The Student Solutions Manual is integrated at the end of every section. The proximity of the solutions encourages students to go back and read the main text as they are working through the problems and exercises. The inclusion of the manual also saves students money. Axler Algebra & Trigonometry is available with WileyPLUS; an innovative, research-based, online environment for effective teaching and learning. WileyPLUS sold separately from text.

best algebra books: Algebra: Chapter 0 Paolo Aluffi, 2021-11-09 Algebra: Chapter 0 is a self-contained introduction to the main topics of algebra, suitable for a first sequence on the subject at the beginning graduate or upper undergraduate level. The primary distinguishing feature of the book, compared to standard textbooks in algebra, is the early introduction of categories, used as a unifying theme in the presentation of the main topics. A second feature consists of an emphasis on homological algebra: basic notions on complexes are presented as soon as modules have been introduced, and an extensive last chapter on homological algebra can form the basis for a follow-up introductory course on the subject. Approximately 1,000 exercises both provide adequate practice to consolidate the understanding of the main body of the text and offer the opportunity to explore many other topics, including applications to number theory and algebraic geometry. This will allow instructors to adapt the textbook to their specific choice of topics and provide the independent reader with a richer exposure to algebra. Many exercises include substantial hints, and navigation of the topics is facilitated by an extensive index and by hundreds of cross-references.

best algebra books: *High School Algebra I Unlocked* The Princeton Review, 2016-08-09 This eBook edition has been specially formatted for on-screen viewing with cross-linked questions, answers, and explanations. UNLOCK THE SECRETS OF ALGEBRA I with THE PRINCETON REVIEW. Algebra can be a daunting subject. That's why our new High School Unlocked series focuses on giving you a wide range of key techniques to help you tackle subjects like Algebra I. If one method doesn't click for you, you can use an alternative approach to understand the concept or problem, instead of painfully trying the same thing over and over without success. Trust us—unlocking the secrets of Algebra doesn't have to hurt! With this book, you'll discover the link between abstract concepts and their real-world applications and build confidence as your skills improve. Along the way, you'll get plenty of practice, from fully guided examples to independent end-of-chapter drills and test-like samples. Everything You Need to Know About Algebra I. • Complex concepts explained in clear, straightforward ways • Walk-throughs of sample problems for all topics • Clear goals and self-assessments to help you pinpoint areas for further review • Step-by-step examples of different ways to approach problems Practice Your Way to Excellence. • Drills and practice questions in every chapter • Complete answer explanations to boost understanding • ACT- and SAT-like questions for hands-on experience with how Algebra I may appear on major exams High School Algebra I Unlocked covers: • exponents and sequences • polynomial expressions • quadratic equations and inequalities • systems of equations • functions • units, conversions, and displaying data ... and more!

best algebra books: *Gödel, Escher, Bach* Douglas R. Hofstadter, 2000 'What is a self and how can a self come out of inanimate matter?' This is the riddle that drove Douglas Hofstadter to write this extraordinary book. In order to impart his original and personal view on the core mystery of human existence - our intangible sensation of 'I'-ness - Hofstadter defines the playful yet seemingly paradoxical notion of 'strange loop', and explicates this idea using analogies from many disciplines.

best algebra books: Discrete Mathematics and Its Applications Kenneth H. Rosen, 2018-05 A precise, relevant, comprehensive approach to mathematical concepts...

best algebra books: *Galois Theory* Emil Artin, 2020-02 The author Emil Artin is known as one of the greatest mathematicians of the 20th century. He is regarded as a man who gave a modern outlook to Galois theory. Original lectures by the master. This emended edition is with completely new typesetting and corrections. The free PDF file available on the publisher's website www.bowwowpress.org
