**body wellness garner nc: Communities in Action** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

**body wellness garner nc: *Adult Education for Health and Wellness*** Lilian H. Hill, 2011-07-15 This volume addresses the relationship of adult education and health from different perspectives. One task of adulthood is caring for one's health and, for many, caring for the health of children, a partner or spouse, and/or aging parents. Changes in health or the desire for improved health often prompt the need for individuals to learn--and adult education can play a vital role in enabling this learning. Editor Lilian H. Hill, associate professor of adult education at the University of Southern Mississippi, and contributing authors assemble a comprehensive review of the critical issues involved including How adults learn while coping with chronic illness Health education within adult literacy, adult basic education, and English as a Second Language classes Approaches to help adults evaluate and learn from online information The influence of globalism on health and more. Concluding with Hill's own argument that health is a social justice issue, the volume illustrates how adult educators need to be involved in health education because they have valuable skills and knowledge to contribute, and because it is a meaningful arena in which to demonstrate the field's commitment to equity and social justice. This is the 130th volume of the Jossey-Bass quarterly report series *New Directions for Adult and Continuing Education*. Noted for its depth of coverage, *New Directions for Adult and Continuing Education* is an indispensable series that explores issues of common interest to instructors, administrators, counselors, and policymakers in a broad range of adult and continuing education settings, such as colleges and universities, extension programs, businesses, libraries, and museums.

**body wellness garner nc: *Finding What Works in Health Care*** Institute of Medicine, Board on Health Care Services, Committee on Standards for Systematic Reviews of Comparative Effectiveness Research, 2011-07-20 Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic reviews for the best summary of the evidence. Systematic reviews identify, select, assess, and synthesize the findings of similar but separate studies, and can help clarify what is known and not known about the potential benefits and harms of drugs, devices, and other healthcare services. Systematic reviews can be helpful for clinicians who

want to integrate research findings into their daily practices, for patients to make well-informed choices about their own care, for professional medical societies and other organizations that develop clinical practice guidelines. Too often systematic reviews are of uncertain or poor quality. There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled, how evidence is appraised, and the overall scientific rigor of the process. In *Finding What Works in Health Care* the Institute of Medicine (IOM) recommends 21 standards for developing high-quality systematic reviews of comparative effectiveness research. The standards address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain. *Finding What Works in Health Care* also proposes a framework for improving the quality of the science underpinning systematic reviews. This book will serve as a vital resource for both sponsors and producers of systematic reviews of comparative effectiveness research.

**body wellness garner nc:** *Social Isolation and Loneliness in Older Adults* National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Health and Medicine Division, Board on Behavioral, Cognitive, and Sensory Sciences, Board on Health Sciences Policy, Committee on the Health and Medical Dimensions of Social Isolation and Loneliness in Older Adults, 2020-05-14 Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

**body wellness garner nc:** Diners, Dudes, and Diets Emily J. H. Contois, 2020-10-02 The phrase dude food likely brings to mind a range of images: burgers stacked impossibly high with an assortment of toppings that were themselves once considered a meal; crazed sports fans demolishing plates of radioactively hot wings; barbecued or bacon-wrapped . . . anything. But there is much more to the phenomenon of dude food than what's on the plate. Emily J. H. Contois's provocative book begins with the dude himself—a man who retains a degree of masculine privilege but doesn't meet traditional standards of economic and social success or manly self-control. In the Great Recession's aftermath, dude masculinity collided with food producers and marketers desperate to find new customers. The result was a wave of new diet sodas and yogurts marketed with dude-friendly stereotypes, a transformation of food media, and weight loss programs just for guys. In a work brimming with fresh insights about contemporary American food media and culture, Contois shows how the gendered world of food production and consumption has influenced the way we eat and how food itself is central to the contest over our identities.

**body wellness garner nc: Old Souls** Thomas Shroder, 2011-05-17 A riveting firsthand account of one man's mission to investigate and document some of the most astonishing phenomena of our time—children who speak of past life memory and reincarnation. All across the globe, small children spontaneously speak of previous lives, beg to be taken “home,” pine for mothers and husbands and mistresses from another life, and know things that there seems to be no normal way for them to know. From the moment these children can talk, they speak of people and events from the past—not vague stories of centuries ago, but details of specific, identifiable individuals who may have died just months, weeks, or even hours before the birth of the child in question. For thirty-seven years, Dr. Ian Stevenson has traveled the world from Lebanon to suburban Virginia investigating and documenting more than two thousand of these past life memory cases. Now, his essentially unknown work is being brought to the mainstream by Tom Shroder, the first journalist to have the privilege of accompanying Dr. Stevenson in his fieldwork. Shroder follows Stevenson into the lives of children and families touched by this phenomenon, changing from skeptic to believer as he comes face-to-face with concrete evidence he cannot discount in this spellbinding and true story.

**body wellness garner nc: The Elephant in the Room** Tommy Tomlinson, 2020-01-14 ONE OF NPR'S BEST BOOKS OF 2019 A “warm and funny and honest...genuinely unputdownable” (Curtis Sittenfeld) memoir chronicling what it's like to live in today's world as a fat man, from acclaimed journalist Tommy Tomlinson, who, as he neared the age of fifty, weighed 460 pounds and decided he had to change his life. When he was almost fifty years old, Tommy Tomlinson weighed an astonishing—and dangerous—460 pounds, at risk for heart disease, diabetes, and stroke, unable to climb a flight of stairs without having to catch his breath, or travel on an airplane without buying two seats. Raised in a family that loved food, he had been aware of the problem for years, seeing doctors and trying diets from the time he was a preteen. But nothing worked, and every time he tried to make a change, it didn't go the way he planned—in fact, he wasn't sure that he really wanted to change. In *The Elephant in the Room*, Tomlinson chronicles his lifelong battle with weight in a voice that combines the urgency of Roxane Gay's *Hunger* with the intimacy of Rick Bragg's *All Over but the Shoutin'*. He also hits the road to meet other members of the plus-sized tribe in an attempt to understand how, as a nation, we got to this point. From buying a Fitbit and setting exercise goals to contemplating the Heart Attack Grill in Las Vegas, America's “capital of food porn,” and modifying his own diet, Tomlinson brings us along on a candid and sometimes brutal look at the everyday experience of being constantly aware of your size. Over the course of the book, he confronts these issues head-on and chronicles the practical steps he has to take to lose weight by the end. “What could have been a wallow in memoir self-pity is raised to art by Tomlinson's wit and prose” (Rolling Stone). Affecting and searingly honest, *The Elephant in the Room* is an “inspirational” (The New York Times) memoir that will resonate with anyone who has grappled with addiction, shame, or self-consciousness. “Add this to your reading list ASAP” (Charlotte Magazine).

**body wellness garner nc: From Scratch** Tembi Locke, 2020-02-04 Now a limited Netflix series starring Zoe Saldana! This Reese Witherspoon Book Club Pick and New York Times bestseller is “a captivating story of love lost and found” (Kirkus Reviews) set in the lush Sicilian countryside, where one woman discovers the healing powers of food, family, and unexpected grace in her darkest hours. It was love at first sight when actress Tembi met professional chef, Saro, on a street in Florence. There was just one problem: Saro's traditional Sicilian family did not approve of his marrying a black American woman. However, the couple, heartbroken but undeterred, forged on. They built a happy life in Los Angeles, with fulfilling careers, deep friendships, and the love of their lives: a baby girl they adopted at birth. Eventually, they reconciled with Saro's family just as he faced a formidable cancer that would consume all their dreams. *From Scratch* chronicles three summers Tembi spends in Sicily with her daughter, Zoela, as she begins to piece together a life

without her husband in his tiny hometown hamlet of farmers. Where once Tembi was estranged from Saro's family, now she finds solace and nourishment—literally and spiritually—at her mother-in-law's table. In the Sicilian countryside, she discovers the healing gifts of simple fresh food, the embrace of a close knit community, and timeless traditions and wisdom that light a path forward. All along the way she reflects on her and Saro's romance—an incredible love story that leaps off the pages. In Sicily, it is said that every story begins with a marriage or a death—in Tembi Locke's case, it is both. "Locke's raw and heartfelt memoir will uplift readers suffering from the loss of their own loved ones" (Publishers Weekly), but her story is also about love, finding a home, and chasing flavor as an act of remembrance. *From Scratch* is for anyone who has dared to reach for big love, fought for what mattered most, and those who needed a powerful reminder that life is...delicious.

**body wellness garner nc: Educating the Student Body** Committee on Physical Activity and Physical Education in the School Environment, Food and Nutrition Board, Institute of Medicine, 2013-11-13 Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. *Educating the Student Body* makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

. . . A recurring sickness, healing crisis, or life-threatening illness? · A feeling of emptiness and longing for no apparent reason? · A major trauma, emotional hardship, or life-changing event? · A feeling of being stuck in a pattern of self-destructive behavior? After observing thousands of people in both private practice and public seminars, Dr. Epstein discovered 12 basic rhythms, or stages of consciousness, shared by all humanity. Each stage of healing has a distinct “rite of passage” that helps us to reunite with aspects of ourselves that are traumatized, alienated, forgotten, abused, shamed, or unforgiven. Each stage also has a characteristic pattern of breath, movement, and touch that can help us to reconnect with the natural, internal rhythms of our body, and experience a greater sense of joy and well-being. “Donald Epstein is an extraordinary healer. In my 25 years of traveling the globe, I’ve never seen anyone who is able to produce the impact he does in such a short period of time. He opens our hearts to new possibilities for individuals and humanity.” — Tony Robbins, Peak Performance Coach and best-selling author of Unlimited Power

**body wellness garner nc: Registries for Evaluating Patient Outcomes** Agency for Healthcare Research and Quality/AHRQ, 2014-04-01 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
