brazilian business groups mixed perception bri: Crafting Coalitions for Reform Peter R. Kingstone, 2010-11-01 The success of political efforts to create a more open economy in Brazil over the past decade has depended crucially on support from the industrial sector, which long enjoyed

the benefits of protection by the state from economic competition. Why businesses previously so sheltered would back neoliberal reform, and why opposition arose at times from sectors least threatened by free trade, are the puzzles this book seeks to answer. Drawing on more than one hundred interviews with industrialists and business association representatives, as well as a wide range of other sources, Peter Kingstone argues that the key to understanding the behavior of industrialists lies in the impact of four factors on their preferences for reform: the effect of economic crisis on industrialists' perception of the viability of the earlier development model; the sectoral location of their firms in the economy and the advantages historically accruing therefrom; the adjustment options available to them given their position in the market; and the credibility of the government's promises about reform and its tactical choices for getting them implemented through the political system. The mix of these four factors, Kingstone shows, left business preferences relatively malleable and thus available for support of reform, even in the face of potentially high costs. Whether such support was forthcoming depended on industrialists' perceptions of the ability of government leaders to deliver on their promises. Widespread resistance to reform occurred when leaders lost their credibility. Under Fernando Collor's leadership, that credibility was never recovered; under Fernando Henrique Cardoso's, it was recovered through increasing concessions to industrialists on the character of the reform program.

Contributors assess the evolution of EU perceptions in each location and discuss how their findings may contribute to crafting foreign policy options for the new EU-27. Brexit is very likely to have a substantial bearing on EU external policy, not merely because of the loss of a major member state with a special relationship to the US and the Commonwealth, but also because it challenges the integrational success story that the EU strives to embody. This book thus serves a dual purpose: on the one hand it broadens the recent studies on Brexit by focusing on external partners' reactions, and on the other it allows for an innovative evaluation of policy options for EU foreign policy. Based on a solid theoretical foundation and empirically rich data, it constitutes an innovative and timely addition to the evolving debate on Brexit and its consequences. This book will be of key interest to scholars and students of European

politics, Brexit, British politics, EU politics, comparative politics and international relations.

It is a commitment to ease bottlenecks to Eurasian trade by improving and building networks of connectivity across Central and Western Asia, where the BRI aims to act as a bond for the projects of regional cooperation and integration already in progress in Southern Asia. But it also reaches out to the Middle East as well as East and North Africa, a truly strategic area where the Belt joins the Road. Europe, the end-point of the New Silk Roads, both by land and by sea, is the ultimate

geographic destination and political partner in the BRI. This report provides an in-depth analysis of the BRI, its logic, rationale and implications for international economic and political relations.

The text explores the full breadth of contemporary political geography, covering not only traditional concerns such as the state, geopolitics, electoral geography and nationalism; but also increasing important areas at the cutting-edge of political geography research including globalization, the geographies of regulation and governance, geographies of policy formulation and delivery, and themes at the intersection of political and cultural geography, including the politics of place consumption, landscapes of power, citizenship, identity politics and geographies of mobilization and resistance. This second edition builds on the strengths of the first. The main changes and enhancements are: four new chapters on: political geographies of globalization, geographies of empire, political geography and the environment and geopolitics and critical geopolitics significant updating and revision of the existing chapters to discuss key developments, drawing on recent academic contributions and political events new case studies, drawing on an increasing number of international and global examples additional boxes for key concepts and an enlarged glossary. brazilian business groups mixed perception bri: *Economic Growth and the Ending of the Transatlantic Slave Trade* David Eltis, 1987-06-11 This watershed study is the first to consider in concrete terms the consequences of Britain's abolition of the Atlantic slave trade. Why did Britain pull out of the slave trade just when it was becoming important for the world economy and the demand for labor around the world was high? Caught between the incentives offered by the world economy for continuing trade at full tilt and the ideological and political pressures from its domestic abolitionist movement, Britain chose to withdraw, believing, in part, that freed slaves would work for low pay which in turn would lead to greater and cheaper products. In a provocative new thesis, historian David Eltis here contends that this move did not bolster the British economy; rather, it vastly hindered economic expansion as the empire's control of the slave trade and its great reliance on slave labor had played a major role in its rise to world economic dominance. Thus, for sixty years

after Britain pulled out, the slave economies of Africa and the Americas flourished and these powers became the dominant exporters in many markets formerly controlled by Britain. Addressing still-volatile issues arising from the clash between economic and ideological goals, this global study illustrates how British abolitionism changed the tide of economic and human history on three continents.

Yet the social sciences have remained substantially isolated from time-related concerns. This book argues that time should be a key part of social theory and focuses concern upon issues which have emerged as central to an understanding of today's social world. Through her analysis of time Barbara Adam shows that our contemporary social theories are firmly embedded in Newtonian science and classical dualistic philosophy. She exposes these classical frameworks of thought as inadequate to the task of conceptualizing our contemporary world of standardized time, computers, nuclear power and global telecommunications.

Yet, by 2020, it was the United States that became the great disrupter – disenchanted with the rules' constraints. Paradoxically, China, India, Brazil, and other emerging economies became stakeholders in and, at times, defenders of economic globalization and the rules regulating it. *Emerging Powers and the World Trading System* explains how this came to be and addresses the micropolitics of trade law – what has been developing under the surface of the business of trade through the practice of law, which has broad macro implications. This book provides a necessary complement to political and economic accounts for understanding why, at a time of hegemonic transition where economic security and geopolitics assume greater roles, the United States challenged, and emerging powers became defenders, of the legal order that the United States created.

Christensen, 2022-11-17 With its incorporation into architecture on a grand scale during the long nineteenth century, steel forever changed the way we perceive and inhabit buildings. In this book, Peter H. Christensen shows that even as architects and engineers were harnessing steel's incredible properties, steel itself was busy transforming the natural world. *Precious Metal* explores this quintessentially modernist material—not for the heroic structural innovations it facilitated but for a deeper understanding of the role it played in the steady change of the earth. Focusing on the formative years of the architectural steel economy and on the corporate history of German steel titans Krupp and Thyssen, Christensen investigates the ecological interrelationship of artificial and natural habitats, mediated by steel. He traces steel through six distinct phases: birth, formation, display, dispersal, construction, and return. By following the life of steel from the collection of raw minerals to the distribution and disposal of finished products, Christensen challenges the traditional narrative that steel was simply the primary material responsible for architectural modernism. Based on the premise that building materials are as much a part of the natural world as they are of a building, this groundbreaking book rewrites an important chapter of architectural history. It will be welcomed by specialists in architectural history, nineteenth-century studies, environmental history, German studies, modernist studies, and the Anthropocene.

brazilian business groups mixed perception bri: *Rupert Murdoch* Neil Chenoweth, 2002-11-12 If you want to understand how modern media has changed the world, this is the one book you must read. Rupert Murdoch is the man everyone talks about but no one knows. He's everywhere, a larger-than-life media titan who has spent a lifetime building his company, News Corporation, from a small, struggling newspaper business in Australia into an international media powerhouse. Rupert Murdoch charts the real story behind the rise of News Corp and the Fox network: the secret debt crises and family deals, the huge cash flows through the offshore archipelagos, the New York party that saved his empire, the covert government inquiries, the tax investigations, and the bewildering duels with Bill Gates, Ted Turner, Gerry Levin, Ron Perelman, Newt Gingrich, cable king John Malone, Michael Eisner, Tony Blair, and televangelist-turned-diamond-miner Pat Robertson. Murdoch's story, however, is more than just how one man built a global business. Rupert Murdoch is both a biography of Murdoch the man (including the divorce from his wife, Anna; his remarriage to a woman young enough to be his granddaughter; and the struggle between his two sons for eventual control of the family holdings) and a "follow the money" investigation that reveals how he has managed to have such a huge impact on the communications revolution that promises to utterly transform life in the twenty-first century. The investigation concentrates on Murdoch's three great campaigns: in the 1980s, when his determination to launch an American television network overturned the media industries of three countries; in 1997, when Murdoch took on every broadcasting group in America; and the process of reinventing himself since then, culminating in his bid to win DirecTV from General Motors. This is the saga of the man who has stalked, infuriated, cajoled, threatened, and spooked the media industry for three decades, whose titanic gambles have shaped and reshaped the media landscape. Win or lose, Murdoch is the man who has changed everything. And Neil Chenoweth is the right person to tell the story: In 1990 he wrote a magazine article that prompted a secret Australian government inquiry into Rupert Murdoch's family companies, and he's been on the Murdoch case since then. Chenoweth reveals what no person ever has about the man (and the company) who is probably the most significant media player of them all.

It was almost completely unprepared to do so, and this was particularly evident in its ability to project power and to control the vast colonial spaces in Africa. Following the uprisings of March of 1961 in the north of Angola, Portugal poured troops into the colony as fast as its creaking logistic system would allow; however, these new arrivals were not competent and did not possess the skills needed to fight a counterinsurgency. While counterinsurgency by its nature requires substantial numbers of light infantry, the force must be trained in the craft of fighting a [small war] to be effective. The majority of the arriving troops had no such indoctrination and had been readied at an accelerated pace. Even their uniforms were hastily crafted and not ideally suited to fighting in the bush. In reoccupying the north and addressing the enemy threat, Portugal quickly realized that its most effective forces were those with special qualifications and advanced training. Unfortunately, there were only very small numbers of such elite forces. The maturing experiences of Portuguese and their consequent adjustments to fight a counterinsurgency led to development of specialized, tailored units to close the gaps in skills and knowledge between the insurgents and their forces. The most remarkable such force was the flechas, indigenous Bushmen who lived in eastern

Angola with the capacity to live and fight in its difficult terrain aptly named 'Lands at the End of the Earth'. Founded in 1966, they were active until the end of the war in 1974, and were so successful in their methods that the flecha template was copied in the other theaters of Guiné and Mozambique and later in the South African Border War. The flechas were a force unique to the conflicts of southern Africa. A flecha could smell the enemy and his weapons and read the bush in ways that no others could do. He would sleep with one ear to the ground and the other to the atmosphere and would be awakened by an enemy walking a mile away. He could conceal himself in a minimum of cover and find food and water in impossible places. In short, he was vastly superior to the enemy in the environment of eastern Angola, and at the height of the campaign there (1966-1974) this small force accounted for 60 per cent of all enemy kills. This book is the story of how they came to be formed and organized, their initial teething difficulties, and their unqualified successes.
