bronx wellness family dental: **It's Not Always Depression** Hilary Jacobs Hendel, 2018-02-06 Fascinating patient stories and dynamic exercises help you connect to healing emotions, ease anxiety and depression, and discover your authentic self. Sara suffered a debilitating fear of asserting herself. Spencer experienced crippling social anxiety. Bonnie was shut down, disconnected from her feelings. These patients all came to psychotherapist Hilary Jacobs Hendel seeking treatment for depression, but in fact none of them were chemically depressed. Rather, Jacobs Hendel found that they'd all experienced traumas in their youth that caused them to put up emotional defenses that masqueraded as symptoms of depression. Jacobs Hendel led these patients and others toward lives newly capable of joy and fulfillment through an empathic and effective therapeutic approach that draws on the latest science about the healing power of our emotions. Whereas conventional therapy encourages patients to talk through past events that may trigger anxiety and depression, accelerated experiential dynamic psychotherapy (AEDP), the method practiced by Jacobs Hendel and pioneered by Diana Fosha, PhD, teaches us to identify the defenses and inhibitory emotions (shame, guilt, and anxiety) that block core emotions (anger, sadness, fear, disgust, joy, excitement, and sexual excitement). Fully experiencing core emotions allows us to enter an openhearted state where we are calm, curious, connected, compassionate, confident, courageous, and clear. In *It's Not Always Depression*, Jacobs Hendel shares a unique and pragmatic tool called the Change Triangle—a guide to carry you from a place of disconnection back to your true self. In these pages, she teaches lay readers and helping professionals alike • why all emotions—even the most painful—have value. • how to identify emotions and the defenses we put up against them. • how to get to the root of anxiety—the most common mental illness of our time. • how to have

compassion for the child you were and the adult you are. Jacobs Hendel provides navigational tools, body and thought exercises, candid personal anecdotes, and profound insights gleaned from her patients' remarkable breakthroughs. She shows us how to work the Change Triangle in our everyday lives and chart a deeply personal, powerful, and hopeful course to psychological well-being and emotional engagement.

bronx wellness family dental: Community Schools in Action Joy G. Dryfoos, Jane Quinn, Carol Barkin, 2005-03-24 A community school differs from other public schools in important ways: it is generally open most of the time, governed by a partnership between the school system and a community agency, and offers a broad array of health and social services. It often has an extended day before and after school, features parent involvement programs, and works for community enrichment. How should such a school be structured? How can its success be measured? *Community Schools in Action: Lessons from a Decade of Practice* presents the Children's Aid Society's (CAS) approach to creating community schools for the 21st century. CAS began this work more than a decade ago and today operates thirteen such schools in three low-income areas of New York City. Through a technical assistance center operated by CAS, hundreds of other schools across the country and the world are adapting this model. Based on their own experiences working with community schools, the contributors to the volume supply invaluable information about the selected program components. They describe how and why CAS started its community school initiative and explain how CAS community schools are organized, integrated with the school system, sustained, and evaluated. The book also includes several contributions from experts outside of CAS: a city superintendent, an architect, and the director of the Coalition for Community Schools. Co-editors Joy Dryfoos, an authority on community schools, and Jane Quinn, CAS's Assistant Executive Director of Community Schools, have teamed up with freelance writer Carol Barkin to provide commentary linking the various components together. For those interested in transforming their schools into effective child- and family-centered institutions, this book provides a detailed road map. For those concerned with educational and social policy, the book offers a unique example of research-based action that has significant implications for our society.

Ellis narrates some of the most significant events of the past three hundred years and more—the Revolutionary and Civil Wars, Alexander Hamilton and Aaron Burr's

fatal duel, the formation of the League of Nations, the Great Depression—from the perspective of the city that experienced, and influenced, them all. Throughout, he infuses his account with the strange and delightful anecdotes that a less charming tour guide might omit, from the story of the city's first, block-long subway to that of the blizzard of 1888 that turned Macy's into one big slumber party. Playful yet authoritative, comprehensive yet intimate, *The Epic of New York City* confirms the words of its own epigraph, spoken by Oswald Spengler: World history is city history, particularly when that city is the Big Apple.

Water Science and Technology Board, Committee on Management of Legionella in Water Systems, 2020-02-20 Legionnaires' disease, a pneumonia caused by the Legionella bacterium, is the leading cause of reported waterborne disease outbreaks in the United States. Legionella occur naturally in water from many different environmental sources, but grow rapidly in the warm, stagnant conditions that can be found in engineered water systems such as cooling towers, building plumbing, and hot tubs. Humans are primarily exposed to Legionella through inhalation of contaminated aerosols into the respiratory system. Legionnaires' disease can be fatal, with between 3 and 33 percent of Legionella infections leading to death, and studies show the incidence of Legionnaires' disease in the United States increased five-fold from 2000 to 2017. Management of Legionella in Water Systems reviews the state of science on Legionella contamination of water systems, specifically the ecology and diagnosis. This report explores the process of transmission via water systems, quantification, prevention and control, and policy and training issues that affect the incidence of Legionnaires' disease. It also analyzes existing knowledge gaps and recommends research priorities moving forward.

Unfortunately the adolescents who are frequently the most disconnected from routine health care services - those who lack insurance and family support - are often those at greatest risk for multiple and chronic health problems. Therefore, those that are responsible for delivering health care services to adolescents must address the health conditions that require immediate attention while preparing young people to adopt practices that can help improve their future health status and prevent unhealthy behaviors. Challenges in Adolescent Health Care defines high-quality health care, identifies the strengths and weaknesses of various service models and explores various training programs. The book recommends that health care providers must be sensitive to socioeconomic factors and incorporate health care in a broad array of settings including schools, neighborhoods and community centers.
