RN Adult Medical Surgical Online Practice 2019: A Journey with NGN

Are you an RN looking to boost your skills and knowledge in adult medical-surgical nursing? Did you perhaps try online resources in 2019, specifically those involving NGN (Next Generation Nursing)? This post dives deep into the landscape of online adult medical-surgical nursing practice in 2019, exploring the resources available, the challenges faced, and the overall experience of nurses engaging in this type of learning. We'll examine what worked, what didn't, and what lessons can be applied today, even if the specific platforms from 2019 are no longer active.

The Rise of Online Nursing Education in 2019

2019 saw a significant increase in the adoption of online learning platforms for healthcare professionals. The accessibility and flexibility offered by online courses appealed to many busy RNs seeking to enhance their skills without disrupting their work-life balance. Adult medical-surgical nursing, a complex and ever-evolving field, was a prime candidate for this type of online training. NGN, as a potential provider (assuming NGN refers to a specific online learning platform or a broader concept of next-generation nursing technology), likely played a role in this shift, offering potentially innovative approaches to learning.

Exploring Online Adult Medical-Surgical Resources in 2019 (and their relevance today)

While specific NGN platforms from 2019 might not be readily available now, the content and learning methodologies employed are still relevant. Let's consider the types of resources likely available:

1. Video Lectures and Tutorials: Many online courses likely utilized video lectures to explain complex medical-surgical concepts. These videos, even if from 2019, still offer valuable foundational information. The quality of production might vary, but the underlying knowledge remains crucial.

1. **Interactive Case Studies:** Case studies provide a practical application of theoretical knowledge. Online platforms likely offered interactive case studies, allowing learners to practice their diagnostic and treatment planning skills in a simulated environment. This is a key component of effective adult medical-surgical nursing education that continues to be highly valuable.
1. **Online Quizzes and Assessments:** Regular assessments are vital for reinforcing learning. Online quizzes and exams helped RNs gauge their understanding of the material and identify areas needing further review. This self-assessment aspect remains crucial in continuous professional development.
1. **Discussion Forums and Peer-to-Peer Learning:** The opportunity to engage with other RNs in online forums fostered a sense of community and allowed for the exchange of ideas and experiences. This collaborative learning element is incredibly valuable, and many modern platforms still utilize this approach.
1. **Simulated Clinical Experiences (Possibly Limited in 2019):** While fully immersive virtual reality simulations may have been less common in 2019, some platforms might have offered basic simulated clinical scenarios to test decision-making skills. The development of high-fidelity simulations has progressed significantly since then, but the core concept of simulated learning remains vital.

Challenges Faced in Online Adult Medical-Surgical Practice in 2019

Despite the benefits, online learning in 2019 also presented certain challenges:

1. **Lack of Hands-On Experience:** Online learning, by its nature, lacks the tactile experience of working directly with patients. This is a significant limitation, and supplemental practical training is crucial.
1. **Technological Barriers:** Reliable internet access and the necessary

technology were not universally available, creating a barrier for some nurses.

1. **Maintaining Motivation and Discipline:** Online learning requires self-discipline and motivation. Without the structure of a traditional classroom, it's easy to fall behind.
1. **Accreditation and Recognition:** The accreditation status of online courses varied, and some employers might have been hesitant to recognize certificates from less reputable providers. This continues to be an important consideration when selecting online learning opportunities.
1. **Limited Personalized Feedback:** While online platforms often provided automated feedback, personalized guidance from instructors could have been limited compared to in-person learning.

Bridging the Gap: Applying 2019 Lessons to Current Practice

Although specific online platforms from 2019 may be defunct, the principles of online learning remain. Today's RNs can benefit from understanding the successes and challenges of that era. Prioritizing platforms with robust interactive elements, strong community features, and clear accreditation remains crucial. Supplementing online learning with hands-on practice or simulation experiences remains essential for optimal learning outcomes.

Conclusion

The landscape of online adult medical-surgical nursing education has evolved since 2019. However, the experiences and challenges faced by RNs engaging in online learning during that period offer valuable lessons for today's nurses. By understanding the strengths and weaknesses of early online platforms, nurses can make informed decisions about selecting high-quality, effective online learning resources to enhance their knowledge and skills in adult medical-surgical nursing. Remember that continuous professional development is crucial for staying current in this dynamic field.
