2. **Identify Key Issues:** Determine the central problem or problems presented in the case. What are the patient's primary symptoms? What are the potential diagnoses?
3. **Develop a Differential Diagnosis:** Based on the information provided, create a list of possible diagnoses. Consider the likelihood of each diagnosis based on the patient's presentation.
4. **Order Diagnostic Tests (Hypothetically):** If you were the NP, what diagnostic tests would you order to help clarify the diagnosis? Justify your choices.
5. **Formulate a Treatment Plan:** Based on your chosen diagnosis (or
