Verbal Reasoning: This section tests your vocabulary, reading comprehension, and ability to understand analogies and sentence completion. Expect questions on synonyms, antonyms, reading passages with comprehension questions, and analogies that require you to identify relationships between words.

Quantitative Reasoning: This section focuses on your math skills, covering topics like number sense, operations, geometry, and data analysis. You'll encounter word problems, number patterns, and basic geometric concepts.

Reading Comprehension: This section involves reading passages and answering questions about them. Expect a variety of passage types and question styles, testing your understanding of main ideas, supporting details, inferences, and author's purpose.

Mathematics Achievement: Similar to Quantitative Reasoning, but often involves more complex problem-solving and application of mathematical concepts. This section delves deeper into the mathematical skills covered in the Quantitative Reasoning section.
